#### IBM to double job losses this year to 40,000

International Business Machines, world's largest computer maker, announced that it would be making 40,000 staff redundant this year, double its original estimate.

The US group originally wanted to lose 20,000 jobs in 1992. But in late July it raised the figure to 32,000. The latest figure represents nearly 12 per cent of its worldwide workforce of 344,000.

Japan's output down again: Japanese industrial production last month was 7.6 per cent down on a year ago. It was the 11th successive month in which output fell, the longest series of falls since the mid-1970s. Page 5

Sears, Roebuck, world's second-largest retailer. said it would spin off or sell much of its financial services operation in a vast restructuring operation intended to reduce corporate debt. Debt could be cut from \$38bn to about \$16.5bn, say analysts. Page 17; Lex, Page 16

UK recession bites harder: More than 4,500 job losses were announced in the UK at the same time as new figures confirmed the number of company failures is about to break all records. Page 8; Lex, Page 16

Hostility to foreigners: More than a quarter of German youths hold racist views or are open to anti-foreigner propaganda, according to a survey by a Cologne institute. Page 4

US seeks early resumption of Bosnian aid flights

By Frances Williams in Geneva, Laura Silber in Belgrade and Robert Mauthner in New York supplies had failed to reach Sara-jevo since the flights were suspended four weeks ago, Mrs Sylvana Foa, spokeswoman for the UN High Commissioner for Refugees, said yesterday. "We are THE US is considering a swift resumption of relief flights into not anywhere near prepared for winter," she said. "It seems we will lose a lot of people. It really Sarajevo, the capital of Bosnia-Hercegovina, where up to 400,000 people could die of starvation and

is too late probably for thousands and thousands of people."

An extra 6,000 UN troops needed to open new land routes

into Bosnia had still not arrived, she said, and the agency was short of cash and trucks. In Geneva yesterday, Mr Alija Izetbegovic, the Bosnian presi-dent, said after talks with Mr

Cyrus Vance. UN mediator, that all sides in the conflict had agreed to demilitarisation of Sarajevo in principle. He added that Mr Vance had

flights could resume in 24 hours.

However, US officials indicated a resumption of flights was likely to take place in the next few days rather than immediately. "The airlift, unfortunately, is interrupted today but it looks as if by the end of the week we may be able to resume," Mr Thomas Niles, assistant secretary of state, said in Washington. The airlift was suspended after the shooting expressed the hope that US down of an Italian aid aircraft

nearly four weeks ago.

Mr Vance and Lord Owen, the EC mediator, have expressed their dismay at the failure of governments to resume the flights.

Intensified fighting and a stepping up of "ethnic cleansing" by Serb lorces were continuing to drive people from their homes while reducing the places to which refugees could flee, Mrs Foa said.

Hundreds of thousands of people faced death from cold and hunger because there was nowhere for them to go.

Mr Vance and Lord Owen are due to have talks in Geneva today with Mr Douglas Hurd, the UK foreign secretary, on propos-als to establish a "no-fly" zone in Bosnia aimed at halting Serbian air attacks on the Moslem popu-

# Kohl rejects any idea of 'two-speed' Europe

By Our Foreign Staff

MR HELMUT KOHL, the German chancellor, yesterday rejected the idea of a "two-speed" Europe and urged the UK to keep to the path of integration with the other 11 members of the Community.

exposure this winter, according

Six thousand tonnes of

to United Nations aid officials.

Mr Kohl, who has strong domestic reasons for proceeding cautiously towards European economic and monetary union, said the Community should stick to the timetable of a single currency by 1999. A "two-speed" move would mean a small number of Community countries would achieve monetary union in a much shorter timescale.

He insisted that renegotiating the Maastricht treaty was out of the question, in splite of opposi-tion to it in Denmark and the

Public opinion in both Germany and France was also likely to be strongly sceptical about a two-speed move to European union, which would leave out key nations that both countries regarded as economic and political allies. "We want Britain to be with us, we want a Europe of 12, we don't want a two-speed Europe," he told a press confer-

ence in Luxembourg. Mr Kohl's message to Britain is likely to be reinforced by the French government when Mr John Major, the British prime minister, visits Paris today.

In spite of the growing split in the ruling Conservative party over Britain's European policies, President François Mitterrand is expected to counsel Mr Major against anti-German rhetoric. Mr Mitterrand will try to per-

suade Mr Major to put aside the quarrelling with Germany sparked by this month's currency turbulence. He will urge Mr Major to adhere to the plan to ratify the EC treaty this year.

French officials said.

The attempt to persuade Britain to stick to the Maastricht process comes amid speculation that opposition to the treaty could prompt France and Ger-many to forge European Mone-tary Union (Emu) with a small "core" of other states.

Neither Paris nor Bonn, however, appears ready to press ahead with such a move.

Mr Kohl, who is under pressure from domestic critics who say that the intended new European currency might be less stable than the D-Mark, denied that his government wanted a climmed down Emu. "There are many rumours . . . it's like the Loch Ness monster, it keeps reappear-

ing," he said in Luxembourg.

The chancelior's sentiments re backed up in I Hans-Peter Stihl, president of the German association of chambers of commerce and industry. He suggested that a delay in the Maastricht timetable was more likely than an overt move to a

two-speed Europe. Mr Stihl also called on Britain to remain on the Maastricht track. "If Britain reacts in the right way, and not just by being insulting [about Germany] then there is a good chance that it will

remain on board," he said. Mr Kohl said there was no reason to delay the start of negotiations with other European nations such as Austria and Sweden which have applied to join the 12-nation Community.

He added that it was wrong for people to fear the emergence of a European super-state or for them to blame the European Commission bureaucracy in Brussels for the problems of the EC.

#### **BCCI** accountants facing \$8bn claim

By Robert Peston and Andrew Jack in London

PRICE Waterhouse and Ernst & Young, the leading accountancy firms, are to be sued for an estimated \$8bn for alleged negligence in their audit of Bank of Credit and Commerce International

BCCI's liquidators, led by Mr Brian Smouha, of the accounting firm Touche Ross, are close to serving their statement of claim in their case against PW and Ernst & Young. The claim relates to writs against the two accounting firms issued in the UK high court in March.

The writs allege negligence, breach of duty and breach of contract relating to BCCI audits for 1985 and 1986. The damages claim, thought to be a record for the UK, is based on losses suffered by BCCI since 1986. Ernst & Young and PW will

"LAMONT\$" used to be a rather full little stock with a limited political future. They have suddenly emerged as the most volatile issue on the City and Westminster gossip

Two weeks ago, as the pound was forced out of the European exchange rate mechanism, Mr Norman Lamont's future looked bleak indeed. The chancellor appeared unlikely to survive the sterling cri-

Seven days later, by contrast, he seemed on top of the world. With one percentage point cut in interest rates under his belt and growing support from the Eurosceptic wing of the Tory party, he was the popular advocate of a "British policy in British interests"

Yesterday Mr Lamont's fortunes took another tumble. Remarks by the chancellor at the end of Monday's meeting of European Community economics and finance ministers in Brussels were widely construed as an apology to GerPeter Norman explains how the UK Chancellor ran into German and British flak when trying to play the two audiences simultaneously

many for earlier remarks criticising the Bundesbank's role in the ster-

He awoke yesterday morning to find the Daily Telegraph - the one newspaper he takes more seriously than any other - urging his resignation and the early editions of yes-terday's Evening Standard report-ing fury in the Conservative ranks after the "humiliation" of his words

of regret to Germany. Not for the first time in the past three weeks, observers of UK economic policy making were left shaking their heads and asking what is

really going on.

Mr Lamont's latest discomfiture is a salutary tale on several levels. It shows how UK domestic party politics do not travel in the European Community and how Britain, for all its pro-European rhetoric before Black Wednesday, stands apart from all its other EC partners in harbouring serious doubts about the utility of the European Monetary System in its present form.

Mr Lamont's latest stumble highlights the problems of playing simultaneously to two audiences. Relations between the UK Treasury and the Bundesbank have been poor since the beginning of September when Mr Lamont tried and failed to force a cut in German interest rates at the informal meeting of economics and finance ministers in Bath. The Treasury is also firm in its belief that its efforts to prop up the pound on black Wednesday were fatally undermined by Bundesbank indiscretions. This sense of anger was not assuaged by the very substantial support given by the German central bank to the French franc last week: support that had not been available on such a scale for sterling on September 16.

Mr Lamont's obvious irritation with the Bundesbank and his apparent determination not to return quickly to the ERM made him the new hero of the Euro sceptic wing of the Conservative Party. This con-tributed to the strong support he was given last Thursday when he successfully defended himself in the commons debate on the economy. In his speech, the chancellor once again pinned the blame for sterling's fall on the Bundesbank. During the previous week, how-

ever, he had also been trying to mend fences with Germany. This was apparent in Washington during the weekend after sterling's float where he attended meetings with Mr Helmut Schlesinger, the Bundesbank president, and Mr Theo Waigel, the German finance minister. At that time, UK officials insisted that both sides wanted to put the bad blood behind them. But it seemed that every dose of soothing words on the international stage from Mr Lamont was matched by some criticism of German policy,

designed for the UK audience. In Brussels, Mr Lamont's approach of policy of tailoring his remarks to his audience caught up with him. His statement at a press conference that "I am sorry if any-

as a personal apology to Germany and therefore as a humiliating climbdown. His subsequent clarification that he was refering only to comments in the press for which he has no responsibility has put back the controversy to square one.

But the events of the past days have done more than that. The Brussels meeting, when the other 11 EC nations rallied behind the ERM, showed that in a beauty contest between the UK government and ERM partners will opt for the Bund-

esbank every time.
This week's meeting of EC ministers also exposed Britain's lack of concrete suggestions for reforming

and chancellor first detected "fault lines" in the system.

Britain is still without a clear plan on how to approach the ERM question at the Birmingham summit of EC leaders on October 16. It became clear yesterday that the Treasury has neither broad proposals for a significant change in the system nor specific ideas for detailed technical changes.

In normal circumstances, such an absence of initiatives could be bearish for Mr Lamont's stock. But the chancellor can probably rest easy for the time being. The UK parliament is not due to reconvene until October 19. Before then he will have an opportunity to restore his reputation at next week's Conservative Party Conference It remains to be seen how he will negotiate the high wire between his Eurosceptic supporters at home and his increas-ingly frustrated colleagues among the EC's finance ministers.

#### Britain looks for help from French

and David Buchan in Paris

MR JOHN MAJOR'S 90-minute meeting at the Elysée Palace this afternoon could determine the success of the emergency European Community summit in Birmingham next month.

The UK prime minister's discussion with President Francois Mitterrand is, one insider said, "designed to enable him to start trying to shape the

"It's about squaring the circle" was the perhaps more realistic phrase of another.

Downing Street emphasised yesterday that Mr Major has a good relationship with Chan-cellor Helmut Kohl, whatever the view about briefings from officials of the Bundesbank, and said that the two often spoke on the telephone.

With the prospect of a face-to-face meeting between the two leaders before the mid-October summit looking remote, however, France la increasingly significant as a possible ally on the way forward on the dispute over the exchange rate mechanism and

Mr Mitterrand will urge Mr Major to reduce recent Anglo-German tensions. He will also back the UK leader's plan to inject more democracy into the Maastricht process in an attempt to get Britain to ratify the EC treaty this year, say

Franco recognises Mr Major's internal political problems in pushing treaty ratification, but believes the January 1, 1993, target date for the treaty to enter into force can be met.

French officials.

In the short term. France is worried about the possibility of the UK government taking irreversible steps away from the Maastricht treaty, following sterling's departure from the parity grid of the European Monetary System and consequent British bitterness at lack of Bundesbank support.

For their part UK Foreign Office officials say that while the close result of the French referendum has some side benelits for the UK's agenda, such as its reinforcement of the importance of retaining each country's national identity, other aspects could add to

Though some of the damage to Anglo-German relations may have been undone at this week's EC finance ministers meeting, Mr Mitterrand is still expected to counsel Mr Major not to let himself, or his cabinet colleagues, give vent to anti-German rhetoric.

French officials say they realise, from the way relations with Germany figured large in the stormy French referendum debate on Maastricht, that such rhetoric can prove popuneeds co-operation with Germany if it is to bring the pound back into the ERM.

#### Amato tries to calm nerves on bank deposits

ITALY'S prime minister, Mr Giuliano Amato, yesterday sought to stop what he said was an irrational rush to withdraw cash from banks, by assuring the public that the government was not planning

to touch their money. Bankers said there had been a trend among clients to sell · investment portfolios and raw cash, apparently rumours the governhank deposits. "It is it it is notice-

British run the risk of being left out of the game

#### Major has little time to conjure modest victory out of defeats

THE British presidency of the European Community has reached a turning point. The next three weeks are likely to show whether a modest politi-cal victory can be wrested from the string of humiliating defeats, or whether Mr John Major's pledge to move Britain to "the heart of Europe" will prove no more than a cute Foreign Office slogan.

Time is running out. This week's meeting of European finance ministers in Brussels underlined Britain's nearisolation in the EC, with ministers giving short shrift to Mr Major's demands for a reform of the European exchange rate mechanism (ERM), and demanding that all EC members proceed at the earliest date possible with rati-fication of the Maastricht treaty on European monetary

and political union. Worse still, the British prime minister's European policy is foundering amid mutual recrimination in the Anglo-German relationship and a residue of suspicion in virtually all EC countries about the British and their attitudes to the Community. Repairing the emergency EC summit in Birmingham to discuss Maastricht will require a huge effort by Mr Major and his cabinet col-

When Mr Major succeeded Mrs Thatcher, the bete noire of Brussels, two years ago, he inherited a good deal of good-will. With his early efforts to forge a closer relationship with Chancellor Helmut Kohl, Mr Major appeared to be the first

British prime minister since and that may be one problem Mr Edward Heath to be willing to lead his country to play a full role in the development of

The political and monetary crisis of the past three months has revealed just how exaggerated the hopes were of a new relationship between Britain

ments and tactical errors before and after sterling's Repairing the damage before next month's summit will require a huge effort by the UK prime minister and his colleagues

"We thought we were mov-ing forward with Mr Major, now it looks as if we may not even be able to stand still," said a senior EC official. "We may even be moving back-

The most important force propelling the current crisis was last June's referendum in Denmark which led to narrow rejection of the Maastricht Not only did it unleash the current political uncertainty in

Europe about Maastricht: it also gave fresh impetus to antiboth in the Conservative and Labour parties. In retrospect, says a senior German official, all EC mem-

bers misread the impact of the Danish referendum. "What we thought was the Danish problem in fact turned out to be the "British problem". Or as another EC official put it yesterday: "Even if we solve the Danish problem, we cannot be sure we can solve the British -

withdrawal from the ERM. The first mistake, they believe, came with the British presidency's campaign to open speedy negotiations to enlarge the EC to admit Sweden, Austria and Finland, before ratification of the Maastricht treaty and before final approval of the Delors II spending package pro-viding extra financial aid to

too many for the Community." Brussels officials believe Mr

Major's decision to withdraw

from the ERM was a serious

blow to his European policy, but it was not fatal. Indeed,

they argue that the real dam-

age has come from misjudg-

the poorer southern states such as Italy, Spain and Portugal. However honourable the motives, Mr Major's push looked like a replay of Mrs Thatcher's efforts to limit the The sterling crisis magnified

British misjudgments. First, Britain declined to raise interest rates despite increasing evidence this was the only way to avoid a devaluation of sterling; then it refused to join in a general realignment in return for a cut in German interest rates; finally, it announced accusations of betrayal against

Downing Street's attack against the ERM has ballooned, at least in the eyes of Brussels diplomats, into a broader assault on the integrity of the European Monetary System. The resulting damage in relations with the other 11 members is hard to underestimate. As the joint communiqué signed on Monday night uggested, the EMS is viewed as the sina qua non of mone-

tary stability in Europe. This explains, in part, why there has been so much loose talk in the past fortnight of a two-speed Europe, an early push by France and Germany to monetary union. Doubtles contingency plans exist in Paris and Bonn; but the wider sage is that if anyone, particularly perfidious Albion, should seek to dismantle the Maastricht process, they risk being left out of the game.

What can Britain do? Brussels officials say final judgment on the British presidency will depend on three factors First, how far it allows domestic political considerations to influence its views on Denmark's pleas for special treatment post-Maastricht; second, its willingness to listen -EMS: third, whether it manages to broker a compromise

on the Delors II package. Beyond these issues, there remains the question of ratification of Maastricht before the British parliament. Mr Lamont said on Monday night the Conservative government was "honour bound" to present the the view is that Mr Major must deliver - or be damned

#### UK bank chief aims for pound target

BRITAIN may need to institute some measure of targeting for the pound, even while the currency is outside the European exchange rate mechanism, Mr Robin Leigh-Pemberton, gover-nor of the Bank of England. hinted yesterday.

Speaking in London, he also warned that countries such as the UK with large budget deficits would have little room to speed growth through looser

He indicated that much of the world was looking to Germany to cut interest rates in the coming months as a way of helping international recovery. Mr Leigh-Pemberton said that while Britain no longer needed to keep the pound within set limits of other European currencies, it remained dependent on the economies of

other developed nations. The pound's suspension from the ERM does not mean that the exchange rate does not have a profound impact on (Britain's) economic fortunes". As a result, the continuing need to bear down on inflation meant the UK "cannot afford to ignore" the sterling's level

against important currencies. However, Mr Leigh-Pemberton gave no detalls about what, if any, form of targeting of the exchange rate the bank would like to see Britain adopt. His speech was seen as repeat-ing the broad line set by Mr Norman Lamont, the chancellor, that the UK would continue to monitor sterling.

With much of the world in economic slowdown, there were many demands for a fiscal loosening in specific coun-tries to bolster demand. But in many nations the

"room for manoeuvre is limited" because of large public sector borrowing requirements built up during economic.

expansion in the 1980s.

The governor warned:

"Those countries with seventdeficits need to pursue budge tary consolidation vigorously." That passage was taken as having specific reference to financial year to have a PSBR of more than £30bn, or roughly 5 per cent of gross domestic

Mr Leigh-Pemberton also indicated that a cut in German interest rates would help the prospects of world growth. He said: "[Monetary] relaxation by countries with strong current cles and a satisfactory prices performance, such as Gormany, is most likely to have positive international spillover effects."

M

option would have started to fear that it would end up acquiring a depreciating cur-"The bank would itself have had to start selling into the market to avoid recording a loss once the 'strike price' was reached," says Mr Mark Aus-tin, chief economist at Hong Kong and Shanghai Banking

Corp in London. "That example, repeated a hundred times over, explains what happened to sterling on It would be wrong to exag-

gerate the role of these institutional investors in any explanation of the recent sell-off of weaker ERM currencies. Analysts stress that the interbank market was in a

uniquely "pathological" state after the central banks spent huge sums to prop up the lira. The German and French central banks have also shown that a concerted intervention can still turn the market, even if it is anticipating that a curThe Financial Times (Europe) Ltd

#### German warns on German influence By David Marsh

COUNTRIES which slow progress towards European monetary union risk strengthening Germany's economic domination across the conti-nent, according to Mr Hans-Pe-ter Stihl, president of the German association of chambers of commerce and industry.

Mr Stihl, who has emerged

as an influential spokesman for German business in the debate over future European integration, labelled as "shortsighted" countries such as Denmark and the UK showing opposition to the treaty. If the Maastricht treaty were

not ratified, this would establish the D-Mark more quickly as the "main currency in Europe", since the move to a single currency with a Euro-pean central bank would break down, Mr Stihl said. This would mean the domination of the German economy

in Europe," he said. The Maastricht treaty might have to be implemented initially by a smaller group of EC states, he said. If monetary union went ahead with only a limited number of countries, this would have the effect of "exerting pressure on other countries in Europe to maintain [economic] stability".

However, there were strong political arguments against too overt a move towards "two-speed" Europe. The EC would try to ensure as many countries as possible took part in the final stage of monetary union. The most likely outcome was that the Maastricht process would continue, but more slowly than envisaged.

HE Bundesbank and the Bank of France may have won the battle to save the French franc. But the world's central banks are losng a war to preserve their influence over how the foreign exchange market trades their currencies. Since the middle of the 1980s,

the central banks have had some success in checking fluctuations in exchange rates when they threatened to become extreme. After 1985, for example, the central banks successfully intervened in the market to depress the value of the dollar, by concertedly buying other currencies. Ten years ago, currency mar-

kets were dominated by commercial bank dealers taking short-term positions. Now. managers of pension, insur-ance and investment funds the institutional investors are playing the market aggressively. And they are taking longer-term positions, backed by currency portfolios that match the banks' holdings for

"There is an increasing emphasis on the foreign exchange aspect of fund man-agers' decisions," says Mr Paul Chertkow, head of global currency research at UBS Phillips and Drew in London. "Their aggressive approach and their particular way of playing the market partly accounts for the recent runs on sterling and the Italian lira."

agers increasingly internation-alised their asset holdings as capital controls were reduced. The average UK pension fund, cent of its portfolio invested overseas, compared with 6 per cent in 1980. However, the underlying

During the 1980s fund man-

value of a fund's overseas holding of bonds and equities is affected by fluctuations in the denominated currency. So. fund managers are increasingly "hedging" - or protect-ing - themselves against currency risk by buying and selling the denominated currency on forward foreign

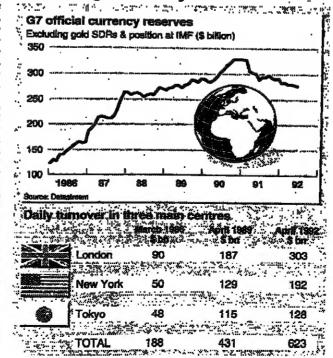

Hedging by investment funds is now the fastest-growing business in foreign exchange. The Bank of England reported last week that the proportion of interbank business in the London foreign exchange market, the largest in the world, had declined by 9 per cent since 1989, while the proportion involving other financial institutions, such as investment funds, had increased.

The share of forward foreign exchange business in London has increased by 12 per cent over the same period, while immediate (or spot) foreign exchange trading has declined by 14 per cent.

These developments concern governments and central banks for several reasons: The scale of currency hedging is producing investment flows that rival central bank

The International Monetary Fund reported in June that the Group of Seven leading industrial countries had total foreign exchange reserves of \$350bn. A leading investment fund manager in London said this week that his bank had \$25bn of assets which were regularly hedged on currency markets.

"On a very busy day, our active flows would be in the order of \$1.5bn to \$3bn," he said. "There are 10 other banks in London which could move the same sums. You can there- interest rates or buying a cur-

• Unlike bank dealers, fund managers take long-term decisions which are far more difficult for the central banks to reverse.

The bank dealers who have become familiar on TV screens make short-term currency plays. They sell a currency, watch it depreciate, buy it back again and make a profit. This short-term view makes them easily influenced by a central bank raising overnight rency to trigger moves in the

Fund managers, however, are more interested in managing risk rather than making short-term gains. As interbank dealers continued to test sterling two weeks ago, the fund managers came into the market and sold the currency on a

"It is much harder for intervention to reverse that kind of decision," says Mr Chertkow. The growing use of hedging instruments such as options and forward contracts reinforces the prevailing currency The trade in these sophisti-

Defence minister wants Paris to abandon 'empty chair' policy

#### Joxe urges bigger French role in Nato

FRANCE should abandon the "empty chair" policy it has long practised at Nato military meetings. Mr Pierre Joxe, the French defence minister,

suggested yesterday.
This is the first time a French defence minister has said in public that he would like to attend Nato ministerial meetings in the way that France's foreign minister has

Mr Joze's comments came as Nato prepared to launch its new rapid reaction force, in which France will not participate, in Germany on

it is expected to have about 250,000 troops available to it, two to three times the number envisaged when plans were first drawn up last year. But there is continuing discussion about the role it might play, if any, in conflicts outside the

I h ban

chief ain

for pop

countries of Nato.

Mr Joze told a European defence seminar that he hoped "France in the future could participate more than it has in the past in politico-military discussions in Nato. But for this to happen, Nato

would have to undergo "real change", and there was no chance of France again placing its forces under what Mr Joxe described as the alliance's outmoded integrated military

He cited with approval the example of Spain, which stayed outside Nato's integrated joined the alliance in the late 1970s, although its defence minister usually sits in on meetings of Nato's defence planning committee and fact that Mr Joxe cleared yesterday's speech with the Elysée indicates he is having some success in shifting President François Mitterrand in a more pro-atlanticist direction.

France's decision to take part in working out Nato's new "strategic concept" last autumn was a step towards greater military involvement in Nato, Mr Joxe noted yesterday. When, shortly after that review. Nato inaugurated its "Co-operation Council" with eastern Europe last December Mr Joxe expressed frustration at being virtually the only defence chief in Europe - easi and west - not to attend.

took up the hint, dropped by Mr Mitterrand last year, that France might be ready to enter discussions with its European partners on future nuclear strategy. This could involve "a widening of the nuclear

At the same time, Mr Joxe

On conventional forces, the French defence minister said the planned "Euro-corps", to be composed of 35,000 French and German troops by 1995, was "an opportunity and not a threat" to other countries and

Speaking at the same seminar, Mr Volker Rühe, the German defence minister, said arrangements putting the planned Euro-corps under Nato command in time of emergency should be settled by December.

Nato officials said yesterday that the Allied Command **Europe Rapid Reaction Force** (ARRC), still in embryonic form, involves 12 Nato countries and will be able to draw on up to 10 divisions. However, no more than four

Commissioners will decide today whether to allow Du

divisions - a force of between 60,000 and 90,000 men - would actually be deployed in sponse to a crisis.

Under the first blueprint approved by defence ministers in April last year the corps, under British command, was to consist of two UK divisions, a multinational airmobile division and another division for southern Europe. The US made clear at that time its willingness to add a US-based heavy division.
Forces assigned to the ARRC

are now expected to include a uncertain what these would German division, an Italian entail division with Portuguese

due to join Italian forces in a combined Multinational Division South.

This is one of two divisions which will be under permanent Nato command in peacetime The other, the airmobile Multinational Division Central comprises British, German, Dutch and Belgian troops.

All the forces are due to be operational in 1995.

#### Survey claims 20m in CIS want to emigrate

AS MANY as 20m people in the three main republics of the for-mer Soviet Union have contemplated emigration, with the US, Sweden and Germany cited as the most popular places for starting a new life in the west, according to a survey published yesterday by Russian and Dutch academics.

The survey found that 8 per cent of Russians, 11 per cent of Ukrainians and 19 per cent of Kazakhs described themselves

Kazakhs described themselves as "frequently" or "permanently" thinking about emigration.

Although 11 per cent of respondents said the US was their first choice, researchers found that Russians, Ukrainians and Keseleke did not tend ians and Kazakhs did not tend to focus on just one or two countries as potential new

"Given this even distribution, it would be conceivable for western countries to indulge in a more liberal immigration policy, provided that nearly all countries took such a stance simultaneously," a

report on the survey said.

The survey, which claims to be one of the most detailed accounts ever compiled of the mental, physical and material needs of people in the Commonwealth of Independent States, was conducted on the eve of the Soviet Union's collapse in November and Decem-

The questionnaire was devised by professors at Eras-mus University in Rotterdam and put to 9,000 households in sia, Ukraine and Kazakhstan by Dr Yuri Levada, a Russian sociologist, and the Rus-sian Centre for Study of Public

Opinion on Social Economic Subjects.

Despite the upheavals since late 1991, researchers say most of the survey's data is still valid, although responses to questions about politics should be regarded with caution. Prof Stanislav Menshikov, a visiting professor at Erasmus, said vesterday that the mood in the former Soviet Union was now "probably worse than a year

The former Soviet Union emerges from the "Brasmus Survey 1991" as a region beset by intense worry about job security, lagging purchasing power, crime and poor, overcrowded housing.

Multi-generation households of grandparents, parents and children are still common. At the same time, one in five households still consists of two

nuclear families. "If we assume that in all two-family households the families would prefer to live independently, if possible, this would suggest a 20 per cent housing shortage," the report

More than 95 per cent of households in the survey area have refrigerators and televi-

than 82 per cent owned a wash ing machine, though the report points out "a Russian washing machine is not the comfortable, luxurious apparatus known in the west." Car own-ership, at 21.2 per cent, is higher than most people in the

One intriguing aspect of the survey is the direct comparison between attitudes in the for-mer Soviet Union and the Netherlands.

Despite the high standards of the Dutch health care system, the Dutch tend to have relatively more complaints about their physical health than Russians, who lead harder lives.

"very shocking" and "dra-matic" disparities in mental health, even after allowing for differences in the Russian and Dutch characters.

Nearly 15 per cent of Russian respondents said that they had occasionally or frequently con-templated suicide, compared with 3.5 per cent of Dutch

Only 33 per cent of Russians said they were in a good mood. compared with 90 per cent of

Russia will drop one of the last obstacles to foreign travel, the exit visa, on January 1 according to the foreign ministry, AP reports from Moscow.

Although restrictions have eased, Mr Vasily Vinogradov, head of the Russian foreign ministry's consular section. was quoted by the Nezavisimaya Gazeta yesterday as saying the exit visas would be dropped when a law on travel and emigration came into force on January 1.

This was likely to lead to a stampede for passports.

#### Brussels may force open markets

#### **Brittan warning** to energy sector

THE European Commission will not fight shy of using spe-cial powers to open up EC energy markets to greater com-petition, Sir Leon Brittan, the terday,

Sir Leon's comments were the first formal indication since the close result in the French referendum on Masstricht that Brussels will continue to challenge public monopolies, despite sen about how such attempts might be interpreted by national governments.

The Commission's controversial plans to liberalise energy markets are based on a gradual approach, with the eventual aim of giving users the ability to buy gas and electricity from

anywhere in the EC. Proposals to push through directives without the approval of member states - using spe-cial powers under the EC treaty - were shelved last year, and even the watered down proposals have met strong

But Sir Leon told a Forum Europe symposium on energy liberalisation yesterday. "This does not exclude the possibility of resorting to the Commistreaty (of Rome) if there is no

ers if it proves necessary."
Brussels commissioners

local polls By Robert Graham in Rome

THE accelerating erosion of electoral support for Italy's traditional political parties has been highlighted by local election results in northern

the surrounding region, were a triumph for the populist Lom-bard League, headed by Mr Umberto Bossi.

The League obtained almost 34 per cent of the vote, an increase of 11 percentage

test of their mettle today, when they are due to debate the long-awaited policy paper on liberalisation of the telecom-Publication of the paper - which proposes to open up cross-border telephone calls to competition - was delayed in July because of political sensitivity about the measures, par-

ticularly in France. EC officials said that the paper might still be withdrawn from today's agenda. Alternatively, it could be dis-cussed, but not published. I tend to feel they [the com-

missioners] won't want to push it to a vote," said one Commis-sion official. The results will serve as an IMF concern

over reform in Russia

RUSSIA'S economic reforms are seriously at risk and infla-tion could reach "dangerous levels by the end of the year", a senior official of the International Monetary Fund told Russian deputies yesterday, writes John Lloyd in Moscow. Mr Hernando Cota, deputy

head of the bank's European division, said that while the IMF supported the policy and many of the actions of the government, "in recent weeks we feel seriously concerned that

both budgetary and credit poli-cies are going off track". Mr Konstantin Kagalovsky, in charge of relations with the international financial institutions and permanent represen-tative to the IMF, said that the key imperative was to bring the countries within the rouble

zone under control. ■The Russian administration is to be overhauled soon, according to the news agency Itar Tass. Almost 100 committees would be axed, together with six ministries, including the ministry of industry.

#### Italy's big parties lose ground in

which the most important were in the city of Mantua and

points since the April general elections. Against this both the Christian Democrats and Socialists saw their vote drop by over one third. The vote for these two latter parties, plus the Social Democrats and Liberals making up the current coalition government, could

muster only 23 per cent. The size of the protest vote was even larger than the swing to the League. Mr Bossi's sister, as a result of a quarrel with her brother, formed her own Alpine League which picked up nearly 7 per cent of the vote in the group's first appearence at the polls.

This was the first poll since April and Mantna represented a good cross section of the northern Italian electorate. The ever increasing vote for the League comes despite an erratic parliamentary

important reminder to the political establishment that any move to bring down the present government and call early general elections would see them suffer a devastating loss of votes. In the short term this should work to the benefit of the coalition government.

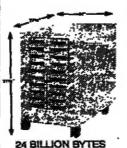

The vote was also significant because Mr Claudio Martelli, the Socialist justice minister. attempted to forge a new alli-ance of the left with dissident former communists of the Party of the Democratic Left and the Social Democrats.

Ireland moves on divorce vote

THE Irish government yester-day published its much-awaited White Paper on divorce, which proposes a referendum to reverse the country's constitutional ban, writes Tim Coone in Dublin.

A referendum in 1986 was defeated by a margin of 63.5 per cent to 36.5 per cent. The Catholic Church remains adamantly opposed to divorce and is likely to campaign again against the proposed change. No date has been set for the referendum. However, it is unlikely to be held before the

# Data General trumpets the open storage system news to IBM, SUN, HP, UNISYS and ICL users!

CLARijON from Data General—the faster, smaller, UNIX® open storage systems that connect to IBM, SUN, HP, UNISYS and ICL for a price that's music to your ears!

Computer companies everywhere have been making a lot of noise lately about UNIX® open storage systems. The problem is that's all they have been making-noise! At Data General, we've gone quietly about our business and have actually created remarkable open storage systems called CLARiiON. And CLARiiON is one call everyone should heed because CLARiiON connects to the UNIX systems-based IBM RS/6000, the SUN SPARCserver 600 series, HP 9000-800 series, UNISYS U6000 series and ICL DRS6000. Its RAID technology vastly increases the storage capacity and high availability of these systems. And CLARiiON does it all for a price that's so low it will

fit right in with the rhythm of your budget. So if you want uninterrupted data access, data loss protection, low cost data redundancy and increased disk performance, all of which you can maintain yourself, think CLARiiON and call Dave Chalmers on 081-758 1111, or fax him on 081-758 6758.

#### EC offer averts trade war with US

in Geneva and Nancy Dunne

THE US and the EC were hauled back from the brink of trade war last night following an 11th-hour EC proposal of compromise on a long-standing dispute over trade in oilseeds.

The EC move in Gatt's governing council came after it formally rejected a US demand for binding arbitration by an independent Gatt panel on trade damages caused by its oilseed subsidies.

The compromise offer occurred as the US administration came under fierce pressure from Senate Republicans to move fast and firmly in imposing retaliatory tariffs on EC food and drink imports for what it claims is \$1bn in losses suffered by US oilseeds producers because of market barriers in the EC. The EC has offered compensation of less

Two Gatt panels have ruled in favour of the US in the dispute, which has dragged on

lation of wheat dumping, threaten to derail efforts to conclude the Uruguay Round of talks on world trade liberalisation, and plunge the US, the EC and their trading partners into trade war.

The last-minute compromise proposal by Mr Tran van Thinh, EC ambassador to Gatt, which will be discussed in more detail by the Gatt council today, combines elements of the independent panel called for by the US with elements of Gatt working party favoured by the EC. A small group, excluding the US, EC and other interested parties, would be established under Gatt to consider EC compensation for losses to oilseed traders within

fixed time period. As trade negotiators haggled at the Gatt council in Geneva. Mrs Carla Hills, the US trade representative, and Mr Julius Katz, her deputy, were called to a meeting with Republican senators in the office of Senator Robert Dole, the minority

The senators stressed the

farm state voters about the administration's failure to make headway in its long running oilseeds dispute, An observer at the meeting said the trade officials expressed concern about the damage to be inflicted on US business from EC counter-retaliation, but that senators were adamant that the oilseeds dispute be made "a litmus test" of the Gatt's ability to resolve trade

Any final decision to move ahead with US retaliation must be made by the Bush cabinet and the president himself. The opportunity for such a meeting is not expected until next

Barlier in the day in Geneva, both the US and the EC drew fierce criticism from trading partners over escalating subsidies for wheat exports.

Mr David Hawes, Australia's ambassador to Gatt, said US and EC export subsidies had "effectively created a two-tier world market where more than half the wheat traded was sold at predatory, subsidy-dis-

## A third of German youth hostile towards foreigners

By Christopher Parkes in Bonn

ALMOST one in three young German adults admits to being hostile towards foreigners, according to a survey pub-

The rest of the nation's youth views antagonism towards foreigners as a serious problem for society although second in overall importance to the state of the environment - but only 25 per cent reject "all forms of discrimination" against non-Ger-

The study, which described its sample as "self-confident, constructively critical, realistic and informed", involved more than 3,000 people, aged between 16 and 24, and was

Empirical Psychology. The ministry for youth and family responded to the findings with a claim that other studies showed only 1 per cent of the age group surveyed was prepared to use violence against foreigners.

carried out by the Institute for

However, the study, which

on asylum-seekers continued, and followed the weekend firebombing of the Jewish barracks in the former Sachsenhausen concentration camp, showed that 13 per cent were "resolutely" anti-foreigner.

In a previous similar survey, made in 1990, less than 30 per cent believed xenophobia was a serious problem. Since the end number of asylum-seekers arriving in Germany each year has almost doubled. More than 400,000 are expected this year.

#### Belgium fends off coalition collapse

BELGIUM'S centre-left coalition yesterday fended off collapse with a compromise on 1993 budget amendments and constitutional reform.

The six-month-old government of Mr Jean-Luc Debaene now has to find an ally to get the reforms through parliament. Constitutional changes require a two-thirds parliaentary majority, which the coalition – made up of social-ists and Christian Democrats from Flemish and Frenchspeaking communities - does

The leaders of the four colaition parties agreed to cuts of BFr21.8bn (\$728m), including a BFr5.2bn cut in social security, to make up a shortfall in

the 1993 budget. When the budget was agreed in August it was widely critic-ised for being too lenient. mists have since lowered their growth forecasts, making budget amendments a necessity if Belgium is to meet the targets on economic and mone-tary union laid out in the Maastricht treaty.

The agreement on constitutional reform is supposed to pave the way for Belgium to become a federal state, with more power devolved to French-speaking Wallonia and to Flemish-speaking Flanders.

The reforms will also intro-duce direct elections for regional councils, and should sort out the deep-rooted dispute over voting rights for Flemish and French speakers who live in each other's

However, the deal may only provide a stay of execution for Mr Dehaene's government. Opinion polls this week suggest the government has the confidence of only 19 per cent of Belgians, making it the least popular government in

# France angered by steel levy This is a protectionist oper. FFrshn of Each atton carried out to atton carried out

France's request, he said. Usinor Sacilor might be

year unless the duties were

STRAINED trade relations between France and the US worsened yesterday when the Prench government called on the European Community to consider retaliation against US levies recently imposed on imported French, German and

British steel. The French industry ministry said the duties on imported European carbon steel bars and rods, provisionally imposed on September 22,

would block exports worth FFr90m (£10.32m) a year from Usinor Sacilor, the French state-owned steelmaker. **US** group

#### urges action on piracy

By Nancy Dunne in Washington

A COALITION representing 1,500 US companies yesterday called for action in Latin America to combat the piracy of American movies, music and audio recordings, computer software and books.

Appearing before a Senate judiciary sub-committee, Mr Eric Smith, executive director of the International Intellectual Property alliance, released a report detailing an estimated \$650m in annual losses in Central and South America.

The report estimated losses to US industry of \$200m a year from displaced sales through Paraguay's export of pirated

audiotapes.
It claims that El Salvador is the Central American base of audio piracy with a manufacturing capacity estimated at 100.000 units per month - nearly twice the legitimate sales of the record industry in

the Central American region. The alliance released a sec ond study concluding that the copyright-based US industries are among the largest and fastest growing sectors of the national economy.

ation carried out under a legal disguise," said Mr Yves-

"Such practices, which lead to the de facto closure of the Thibault de Silguy, interna-US market to foreign steel tional affairs director of Usinor products, call into question the US commitment to an open EC foreign affairs ministers world trading system," said the were expected to discuss action at a meeting next Tuesday, at French industry ministry.

The preliminary levies, paid as a cash deposit or bond, are due for a final decision by the US Commerce Department by December 7.

reversed, Mr de Silguy said. It would then be up to the International Trade Commis-Paris fears the preliminary levies could be extended to flatsion to confirm whether the US rolled products, the raw matesteel industry was suffering rial for car bodies and white goods, which would block real injury, before customs began collecting the duties. FFribn of French exports and

in an attempt to avoid import rows, has been harder hit by the preliminary duties than any other European steel Cabin

The company is being charged a 64.55 per cent dump-ing margin, on top of a 12.88 per cent preliminary anti-sub-sidy duty imposed by the US

earlier this month.

German steel makers are being provisionally charged 49.3 per cent of import value, while British imports are subject to a preliminary levy of 32.02 per cent.

Scaling the defences: Roh Tae-woo and his wife Kim Ock-sook tour the Great Wall north of Beijin

#### Korean investors unfurl red flags with eye to China

John Burton on trade links fuelled by Roh's visit

CHINESE flags are flying along the main avenue of central Seoul this week for the first time since enemy Chinese troops entered the city in early 1951 during the Korean war. The display of the red Chi-

nese banner this time represents the prospect of economic gains that Korean companies to make in China after the visit of President Roh Taewoo to Beijing, which ends today.

The establishment of diplomatic relations between Beijing and Seoul last month has aiready benefited Korean concerns. Samsung Engineering last week won the largest construction order any Korean company has received from China – for the building of a \$200m chemical plant. The Halla Group has announced the establishment of a joint venture cement plant. And an agreement was recently signed for the construction of a Korean industrial park in Tianiin.

South Korea's cumulative total investment in China is expected to double this year to \$300m, making China the leading recipient of foreign investment by South Koreans.

Sino-South Korean trade is also expected nearly to double this year to \$10bn, as trade accelerates in the second half. This would make China the third-largest trade partner for South Korea after the US and

Momentum has been building for closer economic tles since the two countries established trade offices last year. This led to expanded direct trade, which had formerly been conducted through third-parties in Hong Kong. Trade links were further

improved in February when China reduced tariffs on South

Korean products and granted some investment guarantees. Because of the tariff cuts, South Korea is showing signs of a slight trade surplus with China this year, after suffering deficits for the last three years. South Korea's exports to China mainly consist of tex-tiles, electronics, machinery, chemicals, steel and metal products, while imports from China include silk, cotton fabrics, coal, oil and copper.

President Roh's trip to Beijing is likely to increase the confidence of South Korea's big conglomerates, or chaebol, to begin investing in China. Medium-sized Korean companies have so far been the biggest investors in China, producing cheap, labour-intensive goods such as toys, textiles and

Thirty-seven senior businessmen, including the chairmen of the leading chaebol, accompanied President Roh to Belling. where agreements on investment guarantees, trade and technological co-operation were signed.
The chaebol are interested in

joint-venture factories for the production of electronic products and vehicles to take advantage of China's inexpen-sive labour. Samsung Electronics recently announced it would set up a VCR factory in Tianjin.

Hyundai is negotiating a joint venture to manufacture minibuses and trucks in Harbin and another to produce cars in Tianjin and Wuhan. Daewoo wants to build buses in Shanghai.

Other proposed projects include the construction of cement plants by Daewoo and Ssangyong, the development of zinc ore mines by Hyundai and the building of a machinery plant near Beiling by Lucky-

Samsung Engineering last week for an ethylene plant in Jilin province is only the first indication of the construction orders that South Korea could win as part of China's current five-year plan, which is expected to produce \$300bn in

The contract awarded to

South Korean participation

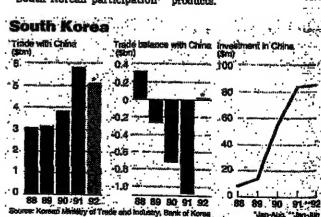

in the building of industrial facilities throughout China will also encourage Korean companies to expand out of north east China, where Korean

investment is concentrated. The Korean preference for this area reflects not only its close proximity to South Korea, but also that this region home to most of the 2m et

nic Koreans living in China. However, the official Korean Trade Promotion Corporation is warning companies about entering China in haste because of continued political uncertainty and the lack of suf-

ficient infrastructure. Pioneer efforts by Korean companies to penetrate China have not always fared well an estimated \$1m annually on a refrigerator factory it opened

five years ago in Fuzhou. Moreover, there is concern-that China is becoming a competitor to South Korea in global markets because of its low wages. Korean producers of footwear and textiles have complained that the Chinese are taking a growing share of the Korean market for these

The Rt Hon. John MacGregor, Secretary of State for Transport, will today 'top out' the CAA's new air traffic control centre building at Fareham, Hants.

Two years ago this model air traffic control centre was just that, an architect's model of the real thing. Today the building is ready to receive its operational equipment. When it becomes operational in 1996 the £350 million-plus centre will manage the main flows of air traffic over England and Wales, leading to an

increase in airspace capacity of 40 per cent. The Centre is a major element in the CAA's £750 million Investing for Growth programme to provide the air traffic control equipment, facilities and procedures to meet forecast growth well into the next century.

We've already completed an advanced en-route radar chain, provided a new ATC computer and other facilities, and updated our network of navigation aids.

The first phase of a new system for handling air traffic over South East England has already been introduced. When it's fully operational in 1995, this will increase capacity by at least 30

system, re-equipped 11 major airports with new radars

We're also working with our European colleagues to harmonise and integrate systems across Europe in an effort to produce 'seamless' air traffic control for

the whole continent. This will provide a better

service than ever for air travellers.

#### Three bankers brought into Thai cabinet

A GENERAL and three bankers who did not stand in this month's Thal general elec-tion have been included in the country's new cabinet, formed yesterday after more than two weeks of negotiation in the five-party coalition.

General Vichit Sukmak will have to quit the army in order to take up his cabinet post as fence minister. He is seen as a protege of General Prem Tin-sulanonda, the former prime minister who played a key role behind the scenes in reducing the power of the group of com-manders who staged last year's coup and attracted mass protests this year.

Of the three bankers Mr Tar-rin Nimmanahaeminda, president of Siam Commercial Bank, becomes finance minister. Mr Amnuay Viravan, chairman of the elected board of Bangkok Bank, the country's largest, becomes deputy prime minister, as does Mr Supachai Panitchpakdi, president of the Thai Military Bank

Together, they signal the government's commitment to cautious fiscal and monetary policy. This has been seen as the foundation of Thailand's economic stability and as helping to maintain one of the fastest growth rates in the world despite periodic political problems and corruption.

Some commentators suggested that the appointnent of the three could lead to clash of superstars who do not always agree about how

the economy should be han-dled. But Mr Chuan Leekphai, the new prime minister, yesterday said it would be healthy for ministers to have differing views so that they could count-er-check each other.

Mr Chuan held out against a controversial bid by his Democrat party's secretary general, Major General Sanan Kachornprasart, to be appointed defence minister. Mai Gen Sanan, who left the army after a failed coup attempt in 1977, and the current military com-manders are said not to be on good terms.

Mr Sanan will not now enjoy the promotion to full general that is normally granted to defence ministers. He has been given the industry portfolio.

Trouble also threatened when General Chavalit Yongchaiyudh, former army chief and now leader of the New Aspiration party, sought to strengthen his own clout by proposing a fourth non-elected economist to the cabinet. This would have deprived one of his MPs of a cabinet seat, and he had to back down.

The leader of the third largest party of the coalition, Major General Chamlong Srimuang, declined a cabinet seat although other members of his party are included. Mr Chamlong, a former governor of Bangkok, led the anti-military protest in May, at one stage soing on hunger strike.

His more radical approach caused a rift between his party said to have contributed to his decision not to join the cabinet. Japanese finance minister rules out special borrowing

#### **Battle looms on Tokyo deficit**

By Charles Leadbeater in Tokyo

MR Tsutomu Hata, the Japanese finance minister, yes-terday fired an opening salvo in what is expected to be a protracted battle over how the government should finance increased public spending to stimulate the economy.

Mr Hata, delivering a lecture in Tokyo, ruled out a return to special borrowing to finance the Y10,700bn (£52bn) emer-gency spending package announced in August. He also rejected demands from retail-ers and industrial leaders for an income tax cut in 1993 to boost flagging consumption.

Mr Hata's remarks are the

furthest he has gone in pledging that the ministry of finance will not allow short-term demands for economic stimulus to corrupt what officials refer to as the hard-won "decency of public finance".

His comments signal an Intensification of the political struggle over how the government should finance higher public spending, which is vir-tually the only domestic source of economic growth at the

It is understood the ministry plans only a limited increase in borrowing to finance the emergency package with a construc-tion bond of between Y1,000bn and Y2,000bn. Officials believe the rest of the package can be financed if the ministry is allowed to use all the Y1,500bn tax surplus it has carried over from last year. It would nor-mally use half the sum to pay off government debt.

In addition it will seek to trim general government expenditure and finance most of the package by raising funds from individuals through the post office savings system.

However, Mr Hata's hard line is an indication of how

Hata: No tax cuts

tricky it will be to construct a durable consensus between Japan's political leadership and the various arms of the economic bureaucracy over

financed.
Ministry hopes of trimming expenditure are unlikely to bear much fruit. Departmental requests for the 1993 budget at the end of August are thought to suggest

that general expenditure may increase by 5 per cent, while the general account, which includes capital spending and local government transfers. could grow by 7.2 per cent. However, the ministry's main immediate concern is the way the recession is eating

into tax revenues. In July these were 3,9 per cent down on the year before, with a 27.1 per cent fall in corporate tax collected and a 23.7 per cent

Official estimates that this vear's tax revenues could fall Y3,000bn to Y4,000bn short of the budgeted total of Y62,500bn are judged to be too optimistic by private sector economists.

#### Output shows steep monthly fall

JAPANESE industry is facing its stiffest test since the deep recession of the mid-1970s, according to official figures yester-day showing industrial production last month was 7.6 per cent lower than a year

It was the 11th successive month in which output was down, the longest series of falls since the 20-month run of declines between May 1974 and December 1975. Production was down 3.7 per cent on July, the largest monthly fall since January 1975.

Government economic policymakers argue that backward-looking indicators such as industrial production paint too depressed a picture. They stress more attention should be paid to forward-looking indicators, in the wake of the boost to

Hopes that the economy will be buoyed this autumn by a resurgence in business confidence was lent support yesterday by a marked improvement in official indicators used to forecast economic activity

three and six months ahead. The Economic Planning Agency said its leading indicators of economic activity leapt to 70 per cent in July, from 46 per cent the month before, one of the steepest monthly rises recorded.

It was the first time for almost two years that the leading indicators have risen above 50 per cent, which is interpreted as

the dividing line between growth and However, EPA officials said the leading

business confidence delivered by the announcement in August of a Y10,700bn (£52bn) emergency spending package. indicators combined with indicators of current and past economic performance still showed the economy in a slowdown. The leading indicators would need to stay above 50 per cent for three months before there could be any confidence that an upturn was on the way.

The collapse of demand was highlighted by the continued rise in industrial inventories in August. Shipments were 6.8 per cent down on the year before and so inventories rose by 4.3 per cent, The ratio of inventories to sales was 10.6 per cent up on the year before.

The continued rise in inventories, despite deep and sustained cuts in production, makes it increasingly likely that industry will have to start cutting into labour costs through early retirement and

CIA reports quoted in Atlanta court

#### Rome 'aware of BNL Iraq loans'

THE US federal Judge presiding over the case of more than \$5bn (£2.9bn) of illegal traqi losns made by the Atlanta branch of Italy's Banca Nazionale del Lavoro (BNL) yesterday revealed that three reports by the Central Intell gence Agency "definitely" show that the bank's head office in Rome was aware of

the Atlanta loans. Judge Marvin Shoob made the revelation, which was entered into the public records last night, during a conference in court with US prosecutors and the lawyer representing Mr Christopher Drogoul, the former Atlanta branch man-

ager who faces a jail sentence. The judge's disclosure marks the first time a US official has quoted secret CIA reports in court that show BNL's head office to have been involved in the Iraqi Ioans scandal. Two former BNL executives had previously told the FT it was untrue that Mr Drogoul acted

without Rome's approval. The central premise of the US government's case against Mr Drogoul is that he was the sole orchestrator of the loans, which helped to finance President Saddam Hussein's nuclear, chemical and missile

Judge Shoob said in court yesterday that the CIA reports that he had read "definitely do

support the defendant's posi tion that BNL Rome was aware of what he was doing, and they also undermine the government's position that this was a

lone wolf type operation." Earlier Mr Luigi Sardelli, former head of BNL's North American division, testified he sent an auditor's report to the bank's Rome headquarters detailing irregularities in Atlanta in October 1988.

Mr Sardelli said the report, mysteriously, was only brought to the attention of BNL executives in July 1989, just three weeks before US officials uncovered the illegal Iraqi loans made through the Atlanta branch. Mr Sardelli said his warnings were ignored by Mr Giacomo Pedde, former BNL chief executive.

George Graham adds from Washington: Senator Al Gore, the Democratic vice-presidential candidate, yesterday launched a swingeing attack on what has stood as perhaps President Bush's proudest Detailing loan guarantees

and technology sales by the Reagan and Bush administrations that helped Iraq build up its military capability before its 1990 invasion of Kuwait, Mr Gore attacked Mr Bush's foreign policy judgment: "His poor judgment, moral blindness and bungling policies led directly to a war that should never have taken place." Angolans vote in

Angola's President Eduardo dos Santos voting yesterday

festive mood

UNDER multi-coloured umbrellas, Angolans queued yesterday to cast their votes in the country's first democratic

Voters pouring with sweat and clutching plastic voter identity cards pushed to get into polling stations in the capital Luanda in festiv spirit. Members of the National Electoral Commiswhite dove with ballot paper in its beak, processed voters in an orderly and professional manner remarkable by most African standards.

Mr Onoffre dos Santos, com mission chairman, said yester-day no violent incidents had marred the first of two days of voting, but a number of polling stations had not opened by the afternoon in the hotly con tested rural provinces of Uige, Huambo and Malange where difficult logistics could become the key issue in post-electoral

> In the worst case, in Uige 160 polling stations out of 450 were still being installed yesterday after their delivery by helicopter had been delayed.

However, Mr Dos Santos said all 5,800 polling stations would be open today, and everybody would be able to vote even if it meant keeping polling stations open tonight. Mr Dos Santos also said turnout had been high, especially in Luanda.

> Many voters appeared confused about how to cast their first ever democratic vote after decades of Portuguese colo nialism and 30 years of civil war. Electoral commission members, watched by repre sentatives of the political par

ties, went through a series of checks against electoral fraud. Even Unita, the former right-wing rebel movement and the main electoral opponent against the ruling MPLA government, after consistently warning against electoral mal

practice yesterday gave a can-tions preliminary approval to the first day of voting.

border activities.

**GLOBAL SECURITY** 

## Canada lifts interest rates to aid dollar

By Bernard Simon in Toronto

THE Bank of Canada pushed domestic interest rates up sharply yesterday in an attempt to brake a sharp fall in the Canadian dollar.

The Canadian currency began sliding in early Septem-ber but the fall has accelerated in the past two weeks, first in response to the turmoil in international financial markets, and more recently on fears that voters will reject proposals for a new Canadian constitution in a referendum scheduled for October 26.

The drop in the dollar led the Bank of Canada to lift its overnight call rate by 3 percentage points yesterday morning to 7.75 per cent. Commercial banks have not yet raised their lending rates, however. Their prime rate is currently at 6.25

per cent. Based on yesterday's peak in money market rates, the prime rate should be in the 7.5-8 per cent range. But no bank wants to be first to reverse a two-year decline in rates, and the banks are also unsure how long the upturn in money-market rates will last. By midday yesterday the Bank of Canada had lowered its call rate again below 6

per cent. The dollar was trading at 79.60 US cents at mid-morning yesterday, its lowest level since early 1988 and some 11 per cent below the peak reached in November 1991.

The currency, which was trading at almost 84 cents at the end of August, has fallen by 2 cents in the past two days.

The markets are starting to build in the worst-case scenario of the country breaking up," the chief economist of one Toronto securities firm said yesterday. Recent public opinion polls show that opponents of the constitutional deal have a clear lead in Quebec, Alberta and British Columbia.

Mr Brian Mulroney, prime minister, warned earlier this mean "the beginning of the process of dismantling Can-

With inflation in Canada running at an annual rate slightly above 1 per cent, most economists are confident that interest rates will drop back once the political uncertainty and international currency

upheaval is over. Goldman Sachs in New York told clients earlier this week that recent turmoil in Canadian financial markets "may be overdone". The firm said that even in the event of a No vote, nothing happens - at least immediately - and we simply revert to the status quo of the last few years". Although opponents of the constitutional deal, known as

'The markets are building in the worst-case scenario of the country breaking up

the Charlottetown Agreement have made a strong showing in the early stages of the referendum campaign, most commentators still expect the Yes cam paign to catch up in coming weeks, especially among unde-

The constitutional reforms would be the most far-reaching changes to Canada's system of government since the federa-

tion was formed 125 years ago. They include changing the Senate from an appointed to an elected house, giving wider powers to provincial governments, and recognising the right to self-government for Canada's 600,000 aboriginal people. Quebec would gain the right to "preserve and promote" its distinct identity. Some experts contend that the resource-rich prairie prov-

inces and the less well-off regions of Atlantic Canada will gain extra clout in Ottawa through the revamped Senate.

Enrique Iglesias: raised annual lending to \$7bn

Risk to democracy in Latin America and Caribbean sparks loan proposals

#### Washington seeks shift in IADB role

Latin America Editor

THE Bush administration has proposed a radical shift in the role of the InterAmerican Development Bank, suggesting it lend without protection of government guarantees and urging a big expansion in lending to attack poverty and poor social condi-

The proposals, according to US officials, are meant to address concerns in Washington about the risks to democracy in Latin America and the Caribbean should the benefits of the emerging economic recovery in the region not be distributed among the

The US, the largest shareholder in the bank, also indicated its willingness to explore a "healthy increase in the hank's capital resources to sustain its lending "indefinitely".

The officials said this would mean that capital increases after the next would not be automatic, as in the past, but would depend on need, a similar arrangement to that of the World Bank

The previous capital increase of \$26.5bn (£15.4bn), agreed in 1989, was meant to support the bank until the end of 1993. This has allowed the IADB, under its president Enrique lglesias, to raise its lending to about

The proposals also suggest divert-ing more of the bank's resources to the region's poorer economies. The

bigger economies, which now dominate the bank's lending policies, will be expected to rely increasingly on private-sector capital inflows.

Reflecting concern that the bank's policy of lending only with a government guarantee could discourage privatisation, the US has called for the IADB to explore the possibility of lending, for a transitional period, to

just-privatised companies. The proposals were contained in a little-noticed speech this month by Mr Olin Wethington, assistant secretary for international affairs at the US Treasury. Mr Wethington said in an interview that it should be possible to

complete negotiations on a capital

THE InterAmerican Development Bank has lifted a block on new loans for the Peruvian government imposed when President Alberto Fujimori

However, although loans for \$221.8m (£129.7m) were signed last week to provide balance of payments support for reforms in the country's financial sector, the bank will not disburse funds until after the government has met conditions related to a return to constitutional

rule. The loans were approved by the IADB board on March 18, but the signing, due to take place at the bank's annual meeting in April, was increase next summer, in time to include it in the fiscal 1995 budget. He said the proposals had broad support in Washington.

Mr Wethington, who would not be drawn on what he considered an appropriate capital increase, said there had been strong support from Latin America. US officials said Brazil, Argentina and Chile had all indi-

cated they supported the proposals. The US suggestions also include the merging of the bank's private-sector arm, the InterAmerican Investment Corporation, into the bank proper and that the Multilateral Investment Fund, set up last year to encourage investment reform, should also be

BLOCK ON NEW PERU LOANS LIFTED

postponed after Mr Pujimori's move. It was not clear yesterday specifi-cally what conditions had to be met before the loans would be disbursed. The bank is seeking to encourage further economic reform in Peru, but is unwilling to send too strong a signal writes Stephen Fidler. of support to Mr Fujimori until there

> tutional rule. Peru cleared its arrears to the IADB a year ago, allowing the bank to resume lending. However, the International Monetary Fund and World Bank are unable to lend, since Mr Pujimori's actions jeopardised a multinational support operation designed to bring Peru out of arrears

is hard evidence of a return to consti-

integrated into the bank. Future capital increases for the IIC should be provided by the bank. Some European governments whose shareholdings in the IIC are larger than those in the IADB are concerned that this would dilute their

The US has also called for a strong reorientation of the bank's priorities towards ensuring that "economic opportunity and government services are broadly distributed". This would include a broad attack on poverty. Fifty per cent of the bank's lending should therefore support "economic opportunity, social sector development and governance objectives in all borrowing member countries".

The US also proposed that: Thirty per cent of the bank's lending should support traditional infrastructure, which in many countries is a big constraint on economic develop-

• So-called policy-based lending balance of payment finance to support specific policy reforms – should be reduced to 15 per cent of total lending. Many larger borrowing countries that have already opened their economies are expected to have less need for such finance. There is now a 25 per cent limit on such lending.

• The bank's concessional loans arm, the Fund for Special Operations. should be restructured to offer interest support on bank loans, rather than act as a direct lender as at pres

#### Brazil awaits Collor impeachment vote

By Christina Lamb in Brasilla

BRAZIL waited eagerly yesterday for the outcome of an historic congressional vote on whether to authorise impeachment proceedings against the country's first directly elected president in 30

Pro-impeachment demonstrations and strikes were held in state capitals throughout the country, with crowds clad in black gathering around giant screens to watch the voting which will determine the future of President Fernando Collor. He has been accused of involvement in a multi-milliondollar corruption scandal.

uncertainty over the outcome, with both sides claiming to be confident of victory. The con-gressional session, under tight security, promises to be a

However, the stock markets rose 6 per cent yesterday morning in expectation of impeachment approval and the end to our months of political crisis.

Only hours before the vote was due to start there was still

Opposition leaders claim

they have 381 votes - above the 336 required to topple Mr Collor - and were celebrating yesterday morning last-minute defections from the government side. Mr Tasso Jereissati, leader of

the PSDB, a leading opposition party, said: "I expect to win with 400 votes. More and more people are coming over to our side." However, Mr Etewaldo

said the president was confident of surviving the vote and was preparing a victory address on national television. The vote was expected to

start at about 5pm local time, with congressmen intoning their vote into a microphone. Mr Collor rejected an opportunity to defend himself. São Paulo, Brazil's largest

city, was brought to a hait by a pro-impeachment transport strike. Trade unions ran frequent pro-impeachment advertsments on national television throughout the day and almost all leading newspapers carried front page editorials demanding Mr Collor's ouster and warning of social and economic chaos if he survived. Mr Albano Franco, president

ness community backed impeachment "in the interests of governability" Mr Genebaldo Correia, consional leader of the PMDB,

of the National Confederation

of Industry, said Brazil's busi-

the largest opposition party, said: "The removal of a president is a traumatic process but Collor's permanence is not serving anyone. He is now completely incapable of helping the country progress."

If Mr Collor loses he will be suspended from office for up to 180 days while he is judged by the Senate. Mr Itamar Franco, the vice-president, will take over. However, the constitution is unclear on how exactly this would happen and Mr Collor's lawyers are already pre-

#### Arms treaty clears last obstacle to ratification

THE Strategic Arms Reduction Treaty (Start) yesterday passed its last big hurdle before ratification, when the US Senate defeated an attempt by six right-wing Republicans to block passage, writes George Graham in Washington.

While Start has already been superseded in many respects by the more radical bilateral nuclear arms cuts agreed by President George Bush and President Boris Yeltsin at their summit in Washington in June, the administration has argued that its ratification is still important, both because the June agreement builds on Start's warhead cuts and because of the verification pro-

But Senator Malcolm Wallop of Wyoming, with five other Republicans, had complained the treaty had too many loopholes - particularly the exchusion of mobile missile launchers. The Senate swept his objections aside with an 87-6 procedural vote, clearing the way for ratification before Con-

gress adjourns next week. Under Start the US would have to cut its strategic nuclear warheads to about 8,550 by 1999, while Russia would cut back to about 6,450 strategic warheads. The subsequent reductions agreed in June will further lower the number of warheads to 3,800-4,250 apiece by 1999, and to 3,000-3,500 by 2003.

By Tim Coone in Dublin

THE talks on Northern Ireland's political future resume in Belfast today amid signs that positions in both the nationalist and unionist camps are hardening, and that the news blackout imposed at the beginning of the process is breaking down.

Speaking on Irish radio yes-terday, Mr John Hume, the leader of the nationalist Social Democratic Labour Party (SDLP) dismissed as "games-manship" unionist insistence that the Irish Republic drop its territorial claim to Northern Ireland, enshrined in its constitution, before any further prog-

The hardline Democratic Unionist Party (DUP) boycotted the Dublin phase of the talks last week, arguing that the Irish government had not shown any flexibility on the

The unionist position "is not facing up to the real problem which is 'how do we live together in this island and how do we respect our differences?" Mr Hume said yester

day. He also ruled out power-charing or majority rule as possible solutions to emerge from the talks and said that Northern Ireland "Is not a natural political entity because it was unnaturally drawn, the normal political standards do not

The SDLP proposal is for a six-man commission to govern the province, including repre-sentation from Dublin and the EC. The Unionists have flatly rejected the proposal.

The DUP said at the week-end that it will abandon the talks entirely after November 16th, the date set for the next Anglo-Irish Conference meeting between the British and Irish governments, if agree ment between the four Ulster parties and the two govern-ments cannot be reached by then. The DUP said it will only attand the talks in Belfast this week, if the Republic's constitutional claim is on the table and is being dealt with "seriously". A service a contract

#### Smith attacks Major as 'opt-out' PM

MR John Smith railled the Labour party to his leadership attack on the competence of Mr John Major as "an opt-out prime minister leading a do-nothing government off the European stage."

in his first leader's address to the party conference, he targeted Conservative disarray after the UK's abandonment of the exchange rate mechanism, promoted the idea of "active government" and consolidated Labour as the party of Europe.

His 50-minute speech, given a three-minute ovation by delegates at Blackpool, was clearly aimed at raising morale after four election defeats by draw-ing attention to his own image of confident authority. By contrast, he accused Mr

Major and Mr Norman Lamont, chancellor, as joint authors of the sterling crisis, mocking them as "the Laurel and Hardy of British politics". The public had witnessed "a

government gripped by indeci-sion, paralysed by fear and a prime minister plodding to disaster," he said, charging Mr Major with humiliating Britain and betraying the trust of the British people. The Labour leader said that humiliation was completed on Monday

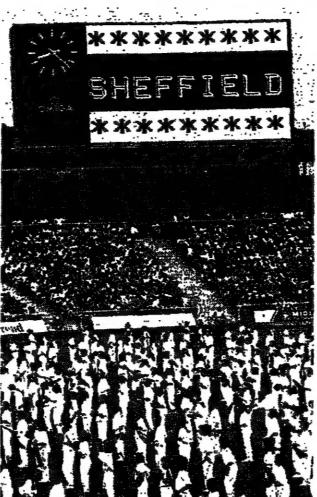

when Mr Lamont apologised for criticisms of the Germans. Delegates welcomed Mr Smith's debut, however many conceded that its low volume delivery and abrupt conclusion had come as a stark contrast to the oratorical fireworks of for-mer leader Mr Neil Kinnock.

Mr Tony Banks, the leftwing MP, described it as a "sensible shoes" style that stressed the leader's credentials as a safe pair of hands. "In a situation when the country is in a deep mess, it underlined the compe tence of John Smith," he

After his attack on the government, Mr Smith set out his own personal creed in language that reflected his Christian socialist upbringing. Claiming that Conservatives believed people were driven purely by greed and self-inter-est, he said Britons wanted to be citizens of a community that "does not pass by on the other side".

in a passage on Europe, Mr Smith reaffirmed his belief in the Maastricht treaty by insist ing that "Europe cannot stand still". But in a gesture to Labour's doubters, he stressed the need for the UK to take up the social chapter of workplace rights and the importance of decisions being made at the closest practical level to the

Incompetence has been blamed for a failed sporting dream, writes Ian Hamilton Fazey

Counting the cost of taking part: Sheffield Council budgeted for a £5m loss but the figure reached £10.4m

#### US airlines attack BA flight plans | MMI clients seek insurance cover scheme

nal audit.

By Richard Lapper

LOCAL authority policyholders of Municipal Mutual, the stricken insurance company, will press creditors to accept a scheme of arrangement - allowing it to meet claims - if this week's rescue talks with European insurance companies break down.

Under a scheme of arrangement MMI would cease to trade but would continue to administer the payment of claims. This would avert a potentially costly liquidation of the com-

pany. Mr Clive Grenyer, under secretary of the Association of County Councils, said the scheme would allow local authorities to have some out-

standing claims paid. The company yesterday called off a meeting with Mr Grenyer and other local authority officials, arguing that negotiations with the Prench group, Garantie Mutuelle des Foncionnaires (GMF) were at "too delicate a

Municipal Mutual insisted Its planned talks with the French group would take place later GMF said on Monday it was

no longer interested in acquiring Municipal Mutual's busis, but it is understood to be ready to act as go-between in talks between MMI and members of Eurosafe - a network of European companies which sell insurance to government officials.

GMF's chairman Mr Jean-Luis Pétriat is chairman of the Eurosafe consortium, whose members include HUK Coburg of Germany, Societe Mutuelle

des Administrations Publiques of Belgium, Gruppo MEIE Assi-curiazioni of Italy, Nueva Corporacion of Spain, Laederstandens Brandforsikring of Denmark, Phoenix General Insurance of Greece, Lusitania of Portugal and Les Assurances Mutuelles d'Europe of Luxembourg.

The Consumers' Association pressed the government to ssue a statement on the future of Muncipal Mutual. It said the government "had allowed the company to trade below agreed solvency margins."

Is this commitment to building the finest airline in the world paying off?

All we can say is, more and more of you are flying Emirates again and again.

By Michael Cassell, Business Correspondent

THE UK recession claimed more than 4,500 jobs yesterday as new figures confirmed that the number of company failures is still accelerating and about to break all records.

A fresh wave of redundancies across the country brought union claims of a "jobs avalanche" and renewed attacks on the government's economic policies.

With industry still awaiting any significant signs of recovery, Dun & Bradstreet, a business information company, said that more than 46,000 companies collapsed in the first nine months of this year almost equal to the total number of corporate failures in the whole of 1991.

The company said the recession could "devastate" small businesses for some time to

Reacting to the latest redundancies, Mr John Edmonds, general secretary of the GMB general workers' Union, claimed unemployment was now "running out of control", with Britain heading towards "the worst winter for unemployment in living memory".

SPECIAL EVENTS

Worldwide recession in the machine tool industry has claimed another UK victim with the appointment of administrative receivers at Coventry-based Wickman Machine Tool Manufacturing. In its heyday of the 1960s and 1970s, the company was Europe's largest manufacturer of multi-spindle automatics, used for high-volume production of turned parts by the automotive and other industries. The receivership is the third in the UK machine tool industry this summer and will increase frustration over the government's attitude towards manufacturing.

Mr Bill Jordan, president of the Amalgamated Engineering and Electrical Union, said there was "a jobs avalanche on the

The biggest jobs blow yesterday was an announcement that about 2,000 jobs will go at the government's Defence Research Agency, set up last Apendy, set up last Appendix defence research activities more cost affective. The job losses, to achieve savings of £30m a year, will

take two years to complete. In the private sector, up to 1,800 jobs are to be shed by Sears, the UK retail and mail order group. In the latest reorganisation of its British Shoe Corporation business, the group plans to close 350 shops-trading under High Street names like Dolcis, Saxone and Freeman Hardy Willis - over the next three years.

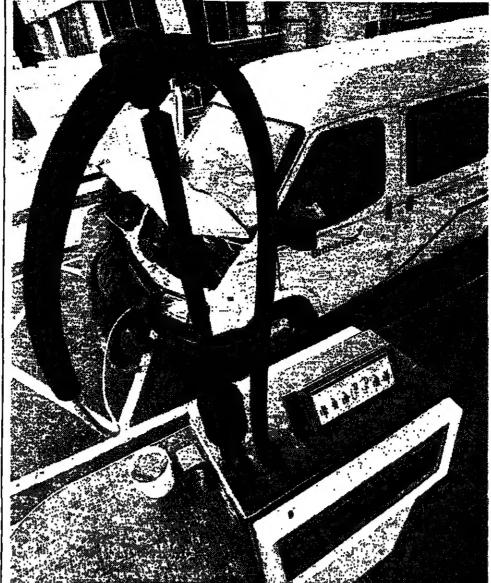

Elsewhere, Northern Telecom, the Canadian telecommunications company, is to axe 426 jobs, most of them in Northern Ireland. The company blamed cost cutting forced by the recession.

Pirelli Cables, the UK subsidiary of the Italian tyre and cable company, is to sack nearly 300 workers at plants in Hampshire and Newport, south Wales. The company blamed falling demand.

To round off another gloomy day on the jobs front, Independent Television News said it was sacking 112 technical support and administration staff as part of a cost reduction programme. The company will ask for volunteers but it said compulsory redundancies could not be ruled out.

#### Company decides to hit the gas pedal

failures
rise by 53%

BUSINESS failures in the third
quarter of this year rose by 53

quarter of this year rose by 53 per cent compared with the same period last year, according to figures released today. They highlight the continuing impact of the recession, especially on smaller companies, Peter Marsh writes.

According to Dun & Bradstreet, a business information company, the 46,545 failures in the first nine months of the year means the 1991 total figure has almost been surpassed. In the third quarter, 15,823 businesses failed, compared with 10,371 in the same period in 1991. The total for the first nine months was 39 per cent up on the 33,532 recorded dur-

ing the same period last year.

AT a conference in London next month, British Gas will launch a drive to put gas-powered vehicles on the roads of Britain, writes Clive Cookson.

British Gas expects to be running 100 of its own vans and cars on compressed natural gas by the end of this year and is putting out to tender an order to convert 200 more vehicles to gas early next year. The company is also taking steps to set up the national infrastructure that will be

essential if gas is to compete with petrol and diesel. By next spring British Gas will have a network of nine natural gas refuelling stations such as the one pictured above. These will be available for use not only by its own vehicles but also by other companies that invest in NGV (natural gas vehicle) fleets.

The UK lags far behind several other countries in introducing gas as a transport fuel. British Gas estimates that almost Im NGVs are in use worldwide. Italy, Russia, Australia, New Zealand, Canada and the US all have large NGV programmes.

The impetus behind NGV development in many parts of the world is environmental. NGVs emit 30 per cent less carbon dioxide and 70 per cent less carbon monoxide than petrol-powered vehicles. Because gas burns more slowly than petrol, the engine

runs more quietly and suffers less wear and tear.

The UK government has fixed excise duty on compressed gas fuel at half the level of leaded petrol. British Gas's target cost of conversion is £1,000 per vehicle. At those rates, the pay-back period for a van running 25,000 miles per year would be about two years.

The main disadvantage of today's "bl-functional" NGVs — which have conventional engines modified to ruu on either gas or petrol/diesel — is the space taken up by the gas cylinders. But this problem should disappear in the long run, as the motor industry develops dedicated NGVs.

Britain in brief

# Devaluation may benefit oil industry

THE fail in the value of sterling after the UK's with-drawal from the European exchange rate mechanism could add £2.5m a day to the output of the UK oil industry, according to the Royal Bank of Scotland's monthly oil index.

The recent rise in the dollar – the currency in which oil is traded – has produced an "almost complete about turn" in the fortunes of the oil industry, the bank's economists said. In August, output rose by 2.6 per cent to just under 1.9 million barrels a day, but this was more than offset by a 3 per cent fall in oil prices to just under \$20 a barrel and a 1.2 per cent weakening of the dollar-sterling exchange rate.

#### Companies repay more debt

Companies continued to repay debt in the three months to the end of August, according to figures from the British Bankers' Association (BBA) which underline the weakness in economic activity among businesses. The repayments were offset by a large rise in borrowing by individuals, mainly for house purchases, which the association thinks was largely due to the rush to beat last month's deadline on the re-introduction of stamp duty on house sales.

#### Few benefits for gas users

Large gas users have seen no price benefits from measures to introduce competition into the UK gas market and face considerably higher prices than users in some European countries, according to Mr Jan Powe, director of the Gas Consumers Council.

The Gas Consumers Council, which represents 18m UK gas customers, said one reason for the price rise for large users was the requirement - imposed by the Office of Fair Trading—that British Gas must halve its share of the industrial supply market by the mid-1990s.

#### Recovery in

Unit trust business recovered slightly in August, before the sterling crisis, with a net inflow of £56m following netoutflows in June and July.

outflows in June and July.

The Unit Trust Association interpreted the rise as showing that private investors' confidence in the UK stock market had recovered. The net inflow to UK Growth funds from private investors was £73m, while £59m came from institutions. Other UK sectors also recorded strong inflows. Much of this was at the expense of overseas sectors, several of which recorded substantial outflows — £22m from Japan, £31m from North America, £33m from Europe, and £42m from the Far East excluding Japan.

#### Leading unions near merger

Britain's two big general unions – the GMB and TGWU – have taken another step towards merger by announcing a joint recruitment caupaign in the building materials industry.

The unions have agreed to

als industry.

The unions have agreed to sign people up into each others' union depending on which is larger in a particular company and will even ask members to switch to the stronger union on their site. Union leaders hinted that this principle might be extended to other industries where the two unions compete for members — such as the food and drink industry or hotel and catering.

#### CAA seeks passenger fund

The Civil Aviation Authority has recommended to the government that a fund for the protection of scheduled airline passengers should be raised by a key on UK airlines rather than by a charge imposed on each customer.

# The Magellans of today need more than a compass to find oil.

Like the Portuguese
explorer, Ferdinand
Magellan, the first man to
circumnavigate the globe,
Nieste too is committed
to worldwide exploration.

Today, Neste explores for and produces crude oil in the North Sea, the Middle East, and the United States.

Low-sulphur crude is a high priority for Neste, as it is ideally suited for retining into advanced low-emission products. Such as Neste's City Gasoline and improved diesel oils. Based on the high-octane component MTBE, which Neste produces workdwide. City Gasoline was the first new-generation, unleaded fuel of its type to be launched on the mass market in Europe.

A large proportion of the output from Neste's refinenes is retailed through our own service station network. Naste is also an important world trader of crude and petroleum products.

Neste is other major strength is chemicals. Neste Chemicals can call on in-depth expenence and know-how in a broad range of areas, from base chemicals to specialty polymers. Something that has helped make Neste one of the world's leading producers of polyethylene, polypropylene, polyester gelcoats, and adhesive resins. Neste's tanker fleet is among the bestequipped in the world. To minimize the risk of spills at sea, all our ships incorporate either a double hull or a double bottom. Neste also has natural gas and LPG interests, and develops and markets solar and wind energy systems.

#### FOR THOSE WITH MORE THAN A PASSING INTEREST IN TIME...

Before you put your name down for a Patek Philippe watch fig. 1, there are a few basic things you might like to know, without knowing exactly whom to ask. In addressing such issues as accuracy, reliability and value for money, we would like to demonstrate why the watch we will make for you will be quite unlike any other watch currently produced.

#### "Punctuality", Louis XVIII was fond of saying, "is the politeness of kings."

We believe that in the matter of punctuality, we can rise to the occasion by making you a mechanical timepiece that will keep its rendezvous with the Gregorian calendar at the end of every century, omitting the leap-years in 2100, 2200 and 2300 and recording them in 2000 and 2400 fig. 2. Nevertheless, such a watch does need the occasional adjustment. Every 3333 years and 122 days you should remember to set it forward one day to the true time of the celestial clock. We suspect, however, that you are simply content to observe the politeness of kings. Be assured, therefore, that when you order your watch, we will be exploring for you the physical-if not the metaphysical-limits of precision.

#### Does everything have to depend on how much?

Consider, if you will, the motives of collectors who set record prices at auction to acquire a Patek Philippe. They may be paying for rarity, for looks or for micromechanical ingenuity. But we believe that behind each \$500,000-plus bid is the conviction that a

Patek Philippe, even if 50 years old or older, can be expected to work perfectly for future generations. In case your ambitions to own a Patek Philippe are somewhat discouraged by the scale of the sacrifice involved, may we hasten to point out that the watch we will make for you today will certainly be a technical improvement on the Pateks bought at auction? In keeping with our tradition of inventing new mechanical solutions for greater reliability and better time-keeping, we will bring to your watch innovations fig. 3 inconceivable to our watchmakers who created the supreme wristwatches of 50 years ago fig. 4. At the same time, we will of course do our utmost to avoid placing undue strain on your financial resources.

#### Can it really be mine?

May we turn your thoughts to the day you take delivery of your watch? Sealed within its case is your watchmaker's tribute to the mysterious process of time. He has decorated each wheel with a chamfer carved into its hub and polished into a shining circle. Delicate ribbing flows over the plates and bridges of gold and rare alloys. Millimetric surfaces are bevelled and burnished to exactitudes measured in microns. Rubies are transformed into jewels that triumph over friction. And after many months-or even years—of work, your watchmaker stamps a small badge into the mainbridge of your watch. The Geneva Seal-the highest possible attestation of fine watchmaking fig. 5.

Looks that speak of inner grace fig. 6.

When you order your watch, you will no doubt like its outward appearance to reflect the harmony and elegance of the movement within. You may therefore find it helpful to know that we are uniquely able to cater for any special decorative needs you might like to express. For example, our engravers will delight in conjuring a subtle play of light and shadow on the gold case-back of one of our rare pocketwatches fig. 7. If you bring us your favourite picture, our enamellers will reproduce it in a brilliant miniature of hair-breadth detail fig. 8. The perfect execution of a double hobnail pattern on the bezel of a wristwatch is the pride of our casemakers and the satisfaction of our designers, while our chainsmiths will weave for you a rich brocade in gold figs. 9 & 10. May we also recommend the artistry of our goldsmiths and the experience of our lapidaries in the selection and setting of the finest gemstones? figs. 11 & 12.

How to enjoy your watch before you own it. As you will appreciate, the very nature of our watches imposes a limit on the number we can make available. (The four Calibre 89 timepieces we are now making will take up to nine years to complete). We cannot therefore promise instant gratification, but while you look forward to the day on which you take delivery of your Patek Philippe fig. 13, you will have the pleasure of reflecting that time is a universal and everlasting commodity, freely available to be enjoyed by all.

property on the scale caused by the IRA bomb blast at the Baltic Exchange in the City of London in April (above). is not, fortunately, an everyday occurrence. Nevertheless. increasing numbers of organisations are engaging in business continuity planning

just in case disaster should strike. According to a Gallup survey commissioned by Coopers & Lybrand, the accountants and management consultants, 62 per cent of the top 500 UK companies now have an emergency plan, up from 48 per cent a year ago.

However, that still leaves a significant proportion of organisations with no contingency plans for staying in business should the worst happen. Moreover, among companies which did have plans, almost half focused exclusively on what would happen in the event

of the loss of a computer system. As Coopers & Lybrand points out: "Any disaster that affects an organisation's main computer systems will, in all likelihood, impact all of the business functions located in the same building." There is little point organising manual systems to replace computers if staff have no back-up offices to work in or equipment.

Only 52 per cent of existing plans make specific provision for handling customer enquiries during a disaster, highlighting "the extent to which existing plans focus too heavily on systems recovery rather than the needs of the business".

Perhaps most surprisingly, only 2 per cent of companies in the manufacturing sector appear to have any arrangements for alternative manufacturing facilities in the event of a disaster hitting

n Englishman's home may still be his eastle, but the fortifications around his A workspace are collapsing as property prices and the quest for greater efficiency batter traditional

ideas of office organisation. Open plan offices, it is clear, were the thin edge of the wedge. Executives "owned " their desks but shared a communal working space. Now, a number of companies are beginning to implement the concept

of "hotdesking" or the "virtual office", where executives own ncither desk nor workspace but make use of any desk that is free during visits to the office.

The pioneers of hotdesking in the UK are the large multinational computer companies, International Business Machines (IBM) and Digital Equipment Corporation (DEC), as well as Andersen Consulting, the management consultancy.

Clearly, it is a concept suited only to organisations where staff spend appreciable amounts of time away from their desks and where office space is at a premium. Andersen's consultants, for example, are as often at clients' premises as in the company's Arundel Street, London, offices. Hotdesking, Andersen claims, is making possible an occupancy ratio in Arundel Street of three square metres a person, or one third the conventional rate.

The two computer companies say that technology is both the reason for, and the key to, hotdesking. All traditional computer manufacturers have been hard hit by a combination of the recession, price collapse caused by technological advances and static demand. As a conse-quence, they are "rightsizing", laying off staff and closing facilities while looking for ways to make more economical use of space.

Executives are being deprived of their desks to save space but there are compensations, says Alan Cane

# Sit where

Hotdesking for such companies is possible only because of the "intelligence" it is possible to build into a desk through computers and clever

phone systems. While IBM has experimented with hotdesking at a number of its older sites in the UK, its recently completed £60m national marketing centre in New Square, Bedfont Lakes, a few minutes from London's Heathrow Airport, is the company's first offices purpose-built for the new

Open plan offices are spread round the periphery of the building at three levels, with open spaces in the centre providing communal dining and recreational facilities. The overall impression is of black girders, bolts and glass.

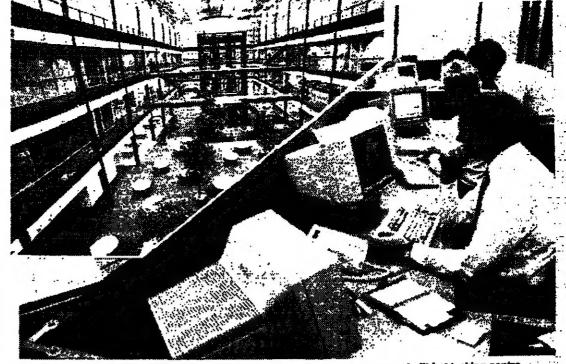

IBM's idea in developing Bedfont Lakes was to consolidate staff scattered around four leased buildings in west London on to one long-term site. Eventually there will be 1,000 people in the building. At present, it is only about half full as staff move from the older offices, but IBM's

planners reckon they are achieving between 20 and 30 per cent space savings compared with traditional office organisation.

IBM's ideas of shared space go back to 1988 when its planners noticed that unoccupied space was growing as the nature of work changed. Surveys showed that desks were typically used for little more than two-thirds of the working week and usually much less.

Research also revealed that while most of the company's larger customers already had an IBM terminal on their premises, IBM's own employees were in favour of portable technology and flexibility in their premises of years. their place of work. Customers, software developers and systems builders had all taken precedence over IBM's own marketing and sales spe-cialists when it had come to the allocation of the latest computing

technology.
This unfulfilled desire for flexibility formed the basis for a unique deal. Employees were persuaded to give up their personal space - indi-

IBM's national marketing complex near Heathrow is the company's first purpose-built holdesking centre

vidual desks and offices - but in exchange were given the latest IBM personal computer technology,

including portable systems. In other words, Bedfont Lakes staff have traded off a loss of identity in the workplace against freedom. IBM's own surveys suggest they are at least as happy in the new environment as they were in

Work areas at Bedfont Lakes are of two sorts; one for staff who come into the office every day and which are little different from traditional offices. Then there are the hotdesks

which offer standard facilities throughout the building.
Each member of staff has his or her own secure locker for personal effects. There are larger, lockable

filing cabinets for documents and records used by work groups. Each hotdesk is equipped with a personal computer connected to the corporate network, a point to plug in a portable computer and a telephone handset. When staff visit the building, they find an empty desk and key into the computer system which automatically sends their

own electronic mail and telephone

messages to that workspace. In practice, staff tend to use the same desk or one close to it: mem bers of work groups cluster together as if they owned the same desks and office space. Robert Young, a customer service specialist, says: "I thought I was not going to like it.

but it is working quite well." He now uses a laptop computer in the office and at home. It is an innovation which has opened new possibilities for staff. Some people in this department are quite determined never to go into the office again," one manager admitted.

#### Tackling the types who take stress to heart

Dr Michael McGannon looks at new research into coronary disease

Since the 1960s,

attempts have been nade to define certain personality characteristics that make some people more prone to coronary heart disease than others. Type

HEALTH CHECK A" people, as opposed to their more laid-back "Type B" counterparts, have been described as the sort of people who are always in a hurry, are inordinately impatient, aggressive or even hostile, speak in an explosive way, and are goal-ori-

ented, competitive and driven. Over the years there has been no clear verdict on whether Type A personality can be categorised as an independent risk factor for heart disease. However, new research is shedding light on this complicated issue.

Diane Summers | Two characteristics of Type A

behaviour which may well lead to heart disease, and which have also been linked to suppressed immune function and cancer deaths, have been isolated by US researchers. flight or a fight. They are: hostility - antagonism as a form of severe competitiveness

- and time urgency - "never enough hours in a day". These two traits are interrelated: to a person who has a sense of needing to compress more and more activity into a shrinking day, anyone or anything blocking that process will cause irritation and

The human nervous system evolved during more primitive times when the main threats to survival were physical. When faced

may provoke a hostile reaction.

with stress, the body's systems, therefore, are geared to an appropriate physical response. The ner-vous, cardiovascular and hormonal systems prepare the body either for

For example, blood pressure, heart rate and respiratory rates all rise, increasing oxygen demands by the heart; muscle tension increases In preparation for a flight to safety, or a fight; and sweating increases as a cooling mechanism.

In a modern context, there is usu-

ally no physical resolution to this stress. Moreover, at the moment when the mind and body scream for simple things such as oxygen and water, modern managers inappropriately respond with cigarettes, which decrease the oxygencarrying capacity of the blood, or immoderate alcohol, which can depress lucidity, raise blood pressure and force the body to lose precious water.

A personal strategy for coping with stress should include: · Broadening your definition of success to include self-preservation. This first step, already adopted by

younger managers on the rise, is taken not just for your own career but also for your family and friends. Do not exchange precious years of your life, your marriage or your health for a perceived need for professional control. Ask yourself of every stressful situation: "Is it really worth getting sick for?"

 Listening carefully to your body and mind. Start to decipher indlvidual signs and symptoms, not as something to escape or anaesthetise, but as valuable warning of a potentially serious underlying problem. Watch for high blood pressure, chronic fatigue, nervous eating or drinking, sleeplessness, peptic ulcers, tension headaches,

obesity and depression. Managing your time intelligently. Start by living in the real world and planning accordingly. Plan breaks into your daily agenda - even five minutes to take a breath of fresh air and re-evaluate and make daily checklists. Flnish what you have on your plate before loading more on.

 Planning some physical exercise in your daily life. Walk for 10 min-utes after lunch and dinner. This will help periodically to decom-press an otherwise chronically com-ceptions of the property of the property. pressed cardiovascular system. If you need a structured exercise programme, consider joining a health club near your office.

· Not making your reaction tostress more dangerous to your life than the stress itself. There are healthy ways to detach yourself from the stresses that threaten your quality of life: for example, talking things over with your spouse, a health professional or a member of the clergy, deep breath-ing and yoga, meditation and prayer, going to see a film, humour, massage, delegating, tak-ing a holiday, engaging in physical activity, decreasing the use of cof-fee and alcohol or going fishing. The author is the medical director

of the Insead Business Health course.

Bayer: Expertise with Responsibility.

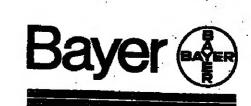

The more accurately a physician is able to diagnose an illness, the more effective treatment will be. Bayer, one of the world's leading pharmaceutical companies, is working in the development of new diagnostic procedures.

Examples include the strips and handy measuring devices. These enable disorders to be diagnosed and monitored quickly and accurately. Our analytical equipment, X-ray systems and large-scale diagnostic units also contribute towards medical progress, because accurate diagnosis allows medication to be used more selectively. Bayer is thus helping both the doctor and the patient in more ways than one.

We would be happy to provide more information upon request. Please write to Bayer AG, Public Rela ns Department (KI), W-5090 Leverkusen, F

The more accurate the diagnosis, the greater the chance of successful treatment.

# Kevlar\* for protection against injury. Sontara\* and Tyvek\* for protection against infection.

Every operating theatre contains a hidden risk - bacteria. They can jeopardize the most careful surgical work. Despite high standards of hygiene, painful, sometimes potentially fatal, wound infections still occur in more than 5% of all operations performed today. This conclusion was reached on the basis of investigations carried out in the USA.

On the other hand, surgeons are also at risk if, for example, they accidentally injure themselves with a scalpel while operating on an HiV-positive patient. In such cases the danger of infection is, naturally, high. Thanks to Du Pont's development work, however, we are now able to control these risks.

SONTARA is a spunlaced fabric specially developed by Du Pont and consisting of a blend of polyester fibre and woodpulp. This fabric forms the basis for operating gowns and drapes available from manufacturers such as Mölnlycke and Baxter. Unlike conventional cotton operating gowns and drapes, SONTARA provides a considerably improved barrier against bacteria, a fact confirmed in a comparative test performed by Prof. Werner at the University Clinic of Mainz. Another advantage of SONTARA is that its special surface treatment is liquid-repellent. Consequently, surgeons and theatre staff are protected from germs transmitted through the blood. Moreover the use of SONTARA operating gowns and drapes means that 12 times fewer particles are released through linting than by conventional textiles. During surgery, such lint particles may act as a transmission medium for micro-organisms and result in infection. Non-wovens provide a higher standard of safety because they are less prone to

damage during transit or washing which could put their sterility at risk. The use of SONTARA made it possible for instance, at the Duke University Medical Center in Durham, to reduce the post-operative infection rate from 6.51% to 2.83%. An increasing number of clinics in Europe are placing their trust in operating gowns and drapes made from SONTARA.

Sterile packaging made of TYVEX is tear- and

#### Tyvek for sterile packs.

TYVEK is a spunbonded material made from microscopically fine, endless polyethylene fibres. Its special properties make it ideal for sterile packaging: it is not only tear-and puncture-resistant, waterproof, lintfree and air permeable. Yet also an outstanding barrier to microbial penetration as demonstrated in a 5-year shelf-life test. Since the packs are heat-sealed, the high surface stability of TYVEK and specially formulated heat seal coatings assure a clean and easy opening.

At the same time TYVEK is perfectly suitable for gas or gamma-ray sterilization which always takes place after closure. TYVEK's structure prevents bacterial penetration but allows gases to enter easily and escape again quickly.

That is why leading manufacturers of medical equipment, Abbott, Baxter, Fresenius and Viggo-Spectramed, for example, use sterile TYVEK packs to protect their products.

#### <u>Keviar</u> operating gloves protect

For the same weight, the para-aramid fibre

gloves offer an important advantage, because they are so soft and flexible they do not limit the surgeons's dexterity and skill. KEVLAR protective surgical gloves are already in widespread use in America. In addition to use by surgeons and their assistants, these gloves are also a valuable contribution towards the safety of dentists, accident and emergency personnel and to others in areas of risk.

Operating gloves made from KEVLAR reduce the risk of infection.

#### lumnyations from Du Pont

SONTARA, TYVEK and KEVLAR are developments of Du Pont's Engineering Fiber Systems, as are NOMEX', TEFLON', TYPAR', CORDURA', ZEMDRAIN' and high tensile stength NYLON. These products never cease to create new potential in a variety of areas ranging from household applications to space travel. Du Pont is one of the leading research-oriented companies in the world; in Europe alone, it employs 21,000 people and has already invested DM 35 billion.

nvironmental lobby groups. so long at loggerheads with trade policymakers bent on liberalising international trade, have in recent weeks been drawn into an intimate embrace.

At meetings with staff of the Gen eral Agreement on Tariffs and Trade (Gatt), and last week with national delegations at the Organisation for Economic Co-operation and Development (OECD) in Parls. the groups have been provided with an unprecedented platform to voice

Whether their arguments prove strong enough to moderate national policies on international trade rules has yet to be seen. They almost certainly come too late to have any direct impact on the outcome of the long delayed Uruguay Round of world trade talks. But the fact that they have been drawn into the debate on reform of trade rules, rather than viewed by governments with a mixture of hostility and suspicion, is nevertheless significant.

By the time some 50 environmen tal and development campaigners sat down last week at a joint meet-ing of the OECD's trade and environment committees, they had honed a common position, focusing on six principal areas of concern:

The need for internationally agreed standards, particularly on

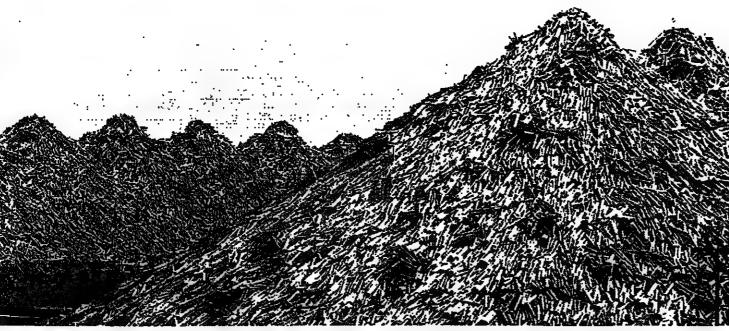

food and farm products, to provide a floor from which environmental standards should rise, rather than a ceiling which governments can aim indicative is concern over plans to harmonise the EC's "E-numbers" of permitted food additives. Ahead of harmonisation, the UK has a list of 300 approved additives. This com-

pares with 150 in Germany and Greece, for example. After harmonisation, all EC member states will have a list of 411 approved additives - an alarming backward step, as far as environmentalists are concorned. The result is that food products that in the past have been

barred from Germany because they include prohibited additives may now be freely imported. The need for the Multilateral Trade Organisation (MTO), a powerful new body proposed as part of the Uruguay round of trade reforms to oversee international trade, to give high and formal priority to environmental concerns and in par-

ticular sustainable development. • The need for "pace-setting" governments keen to set environmental standards higher than the international norm to be free to do so. This includes a more controversial conviction that such pace-setters should have a right to act unliaterally in blocking imports from countries with lower standards or dirty

This worry strikes a chord with trade economists - so long as envi-

# Game of give and take

David Dodwell sees signs of closer co-operation between environmental groups and trade policymakers

ronmental standards are not being exploited by protectionist industries. For example, why should Sweden not be allowed to ban the import of goods containing CFCs if there is strong public pressure for the government to take a tough line, and sound scientific evidence to back the move?

But such unilateral powers would become more controversial if Austria and the Netherlands, for exampla, insisted that all timber imports be "forest friendly" - that is, the wood must come from forests that are being sustainably logged. The mind boggles as to how a customs officer is to distinguish "forest friendly" timber from other kinds. • The need for industry to "internalise" the environmental cost of a product - ranging from electricity generators incorporating the true cost of treating nuclear waste to timber prices which include reimbursement to exporting countries for their loss of biodiversity.

While trade economists are beginning to come round to this argument, they have yet to find an agreed set of formulae for measuring the environmental cost to be internalised. They are also anxious that industries should not be allowed to use these costs as an excuse to call for duties on imports from countries that are not bearing

higher environmental costs.

The need for industrial countries

to recognise that they bear the main responsibility for the cost of environmental improvement in poor countries - both because they have the wealth to afford it, and because they are the principal source of globe-threatening pollution. This involves considering schemes such as recycling cash raised through tariffs back to developing countries

The debate appears to have reduced the chronic suspicion with which free-traders and environmentalists have glared at each other

to improve their environment. • The need for international trade bodies to be more open and answerable. This would include not just the Gatt, but also organisations such as the Rome-based Codex Alimentarius, which sets international food standards.

Trade economists are alarmed by various implications of these proposals. Several proposals condone protectionism and make environmental lobbyists easy prey for industry groups anxious to keep for-eign competitors at bay. Others are administratively unmanageable. Some confer on powerful governtheir true environmental cost. ments a right to interfere in the

affairs of less powerful countries. Debate in the OECD and in the Gatt nevertheless appears to have made progress in paring down the areas of difference, and in helping either side to recognise the merits of the other's arguments. Not least it appears to have reduced the chronic suspicion with which free-traders and environmentalists have tect the environment. traditionally glared at each other.

Groups emerging from last week's OECD discussions say that some intractable areas remain - most significantly over a country's right to attack "process" standards, and to take environmental measures which interfere with another countries' sovereign right to set their own environmental priorities.

At a more general level, advocates of free trade are likely to remain irreconcilable with anvironmentalists over their fondness for regulation. But it now appears possible that

the Gatt will reconsider its draft proposals for the MTO, giving it a more explicit brief to take account of the need for trade to contribute to sustainable development, rather than trade growth on any terms.

Trade policymakers also appear ready to pay serious attention to building into the price of products

For their part, many environmental campaigners will continue to shun economic growth, arguing that the west's reientless quest for growth is a fundamental cause of environmental problems. Still more challenge the claim that growth and the wealth it generates - will provide the resources needed to pro-

But an increasing number appear to acknowledge that strong environmental policies are unlikely to grow out of weak or recession-ridden economies. Since trade liberalisation is powerfully linked with strong economic growth, so there is a clearer recognition that free trade need not be an adversary in the fight for higher environmental stan-dards, but indeed could be an ally. There is no question that OECD delegates have become much more sensitised to environmental concerns," an OECD official said yester-

day. She signalled that the next step would be to call a meeting between the OECD and industrial interests, probably in November. Beyond that, the ambition is to meet jointly with both environmentalists and industrial interests. probably early in 1993.

#### German industry snubs carbon tax

By Bronwen Maddox and Paul Needham

erman business leaders attacked their govern-ment's support for a carbon tax at last week's German Environment Conference in Frankfurt, estimating that it could cost German industry DM 12bn-5bn (£4.7bn-£5.9bn) by 2000.

The German government has frequently made clear its support for proposals for a tax to help cut missions of gases that could narm the atmosphere. At the Rio Earth Summit in June, Chancellor Helmut Kohl said he planned cuts of 25-30 per cent in carbon dioxide emissions by 2005 compared with

However at a recent meeting of EC environment ministers at Gleneagies, Klaus Töpfer, the Gernan environmental minister, said

that a tax to help cut emissions of carbon dioxide "is absolutely necessary, and very soon" if Germany is to meet those targets. It will be a hell of a job to get there," he there, "The added. German govern-ment is in favour of a tax, but many parts of German business are against

Klaus Töpler: carbon tax

it." The depth of that opposition was clear at Frankfurt, one of Europe's biggest environmental conferences, where industrialists and union leaders warned that a tax could cost German industry billions of D-Marks and destroy its competitiveness.
Roland Turowski, director of the energy department of the German

Electricity Industry Federation, said: "I know Mr\_Töpfer's view and it is wrong. These are high costs which will be passed on to the consumer, DM 3bu-5bn a year and DM 12bn-15bn by 2000." Dietrich Wittmeyer, energy pokesman for the German Chemical Industry Federation, also

accused the government of being too much fixed on the environment – they must also consider Several industrialists instead favoured more investment in energy-efficient technology. Dieter Franke, environmental spokesman for the German automobile association, also recommended a price structure that favoured environmentally cleaner cars. However, technological changes

alone may not be enough to counter the rapidly rising level of emissions caused by modernisation of the former east German states, which Topfer describes as a huge impediment to his plans.

Of the 1bn tonnes of carbon dioxide emitted by Germany each year, around a third comes from the former eastern states, although they have only a fifth of the combined population. That is partly because of their use of lig-nite fuel, a particularly dirty form of energy. The government also projects that the

> will double to the west's level of one car for every two Decple. As well as the opposition of businesses, the German gov ernment must counter the ambivalence of many EC members about the form of such a

number of cars

in east Germany

tax. At Rio EC members gave their backing on the condition that a tax would not

be implemented unless all 24 OECD countries agreed to it. Top fer said - in what may be wishful thinking - that he hoped the EC could decouple tax proposals from this condition. However, the German position has the full backing of EC envi-

ronment commissioner Karel van Miert, who repeated his belief last week that "we need to go ahead with it". Because of the importance of transport policy in meet ing the targets, Germany has been a vigorous supporter of van Miert, who is also EC transport minister. Van Miert's appointment as environment minister lasts only until December but he recently said: "I would be happy to stay on after December, subject to the Belgian government's plans, and it is very probable that I will."

Psychologically perceptive: Francesca Zambello's staging of Bellini's 'Il Pirata' for the Zurich Opera House

Opera in Zurich and London

#### 'Il Pirata' and 'Fidelio'

ike two lovers who don't speak the same language, Germanfascinated by bel canto opera without being able to make much sense of it: you either get some disastrously way-out form of Registheater, or a bland pictorial reproduction by an imported Italian director. It seems to be only nonpartisan outsiders who can pull off the marriage between German logic on the one hand, and Latin warmth and spontaneity on the other. This is what distinguishes the new staging by the American producer Francesca Zambello of Bellini's Il Pirate at the Zurich Opera

Il Pirata was Bellini's first commission for La Scals (1827), the first of his collaborations with the librettist Felice Romani and one of the first Italian operas to dispense with recitation secon in favour of the continuous Romantic style of composition. As with any successful revival, one is left wondering why it has been left to languish so long (Callas in the 1960s and Caballé in the 1960s being its last great-exponents). R-Pirato rewards the listener with some of the most sublime melodies Bellini ever wrote. At first sight, its dramatic ingredients are not far off the romantic stereotype: Imogene, married to Ernesto, loves the pirate-nobleman Gualtiero, Ernesto's political rival, and ends up with neither. But look beneath the surface, and you find what Edward Dent recognised more than 50 years ago as "a stimulating exercise in emotional

 $z \to e^{-ip_{x}} x t$ 

In her emblematic, psychologically-perceptive staging, Zambello sees Imo-gene as a universal archetype - the woman whose dutiful marriage and Hausfrau existence preclude any sort of romantic fulfilment except in day-dreams. Imogene dreams of Gualtiero, symbolised by the miniature galleon which she cradles as the curtain opens on Act one, and which the designer Bruno Schwengi turns into a motif for the whole production. He bathes the stage in Mediterranean colours, adding little more than a gauze, a drop cloth and a few nautical props. In her direction of the principals, Zambelio accepted the conventions of Italian opera, but encouraged the singers to substitute emotional polse for melodrama. Only in Ernesto's arrival-scene dominated by a golden horse and a posse of pink-plumed guards – did the production dissolve into kitsch.

But however well they fare as theatre, Bellini's operas stand or fall on the quality of the singing. The main audi-ence draw in Zurich was Mara Zam-pieri, who met the technical challenges without disguising a breathy, effortful quality in her voice production. Imogene is no Minnie or Forza Leonora: for all her stage presence, Zampieri lacks the sparkling clarity and tonal delicacy for Bellini.

The real vocal sparks came from Salvatore Fisichella, an underrated Sicilian tenor who regularly reserves

hurdles in Gualtiero's high-lying music. The American baritone Rodney Glifrey, much admired in French opera and Mozart, made an unhappy Ernesto, Pythonesque in his ceremonial armour

and vocally ill-at-ease. The mainstay of Zurich's Italian repertoirs is Nello Santi, whose performances are always scrupulously prepared and executed, if sometimes marred by a strictness more appropri-ate to a bandmaster. Il Pirata found him in sensitive form, shaping the music tenderly and drawing exquisite solo contributions from horn and cor

Andrew Clark The drab staging of Fidelio by Adolf Dresen has been brought back to Covent Garden two seasons after it was introduced. The revival has been directed by Astrid Vehstedt with a largely new set of principals; only Gabriela Benacková returns in the title role. Jeffrey Tate is the conductor.

Dresen's reworking of the text, with significantly tightened dialogue, has been retained. It shortens the running time, but is otherwise not beneficial, and the question of why it was thought necessary in the first place is never answered. The whole effect, indeed, is of a production without purpose; one waits in vain for enlightenment to arrive, for a reason other than decorative reference in Margit Bardy's designs his best for Switzerland. With his sweet for the slight updating of the story, for and open tone, clear diction and clarion a dramatic spark to set the moral fable despatch, he glided over the numerous ablaze rather than reduce it to an

production takes on a wonder-

fully self-aware tone when, at a

stars regardless of their skills

in speaking verse: Marisa

everyday narrative.

Given thrilling performances the very neutrality of such a setting might have been a bonus, an unobtrusive backdrop to the musical drama. On Monday there were no thrills. Though much of the singing was more than competent, Tate's conducting was leaden and lacked any sense of scale or fervour; it is almost an achievement in itself to make the Prisoners' Chorus as matter-of-fact as it was here, or fail so completely to strike sparks from the Act 2 finale. Elsewhere ensemble was some times tenuous, but then few of the musical components cohered.

Senacková produced some gleaming

phrases, but not enough to create the combination of moral certainty and moving commitment at the core of Leonore; the heroic dimension was missing. There was a useful clean-toned Rocco, complete with limp, from Günter Missenhardt, an underpowered (though reportedly under-the-weather) Pizzarro from Gregory Yurisch. Lynton Artkin-son's fresh Jacquino and Judith Howarth's lively Marzelline provided the brightest playing; Thomas Sunnegardh's Florestan swamped a few well-turned mid-register phrases with some extraordinary squalls and wild pitching above the stave. An unsatisfactory evening almost all round.

Andrew Clements

Royal Opera House, Covent Garden; further performances October 1, 7, 10,

> Tomei's (My Cousin Vinny), Adriana substitutes shouting and gestures for interpreting the text. There are a few gems among the other performances particularly John Michael Higgins' Antipholus of Ephesus and the Dromii, Peter Jacobson and Howard Samuelsohn.

Whatever this production's indulgences. Free Shakespeare in the Park continues to be one of New York's most beloved summer traditions. That Joe Papp's dream of a public theatre lives on after his death last year is a fact that gives pleasure long after the bad-joke hangover from this Comedy has faded.

Prix Italia Broadcasting Festival/Christopher Dunkley

#### Filled with foreboding about the future

f the Prix Italia broadcasting festival is anything to go by, and experience suggests it is, radio and television are in a greater state of change and confusion in all parts of the world today than ever in the history of these two relatively young mass media. When this stival began as a radio event in Capri in 1948 television was little more than a technical trick used by a few broadcasters to provide illustrations for radio programmes. Today television is so inextricably bound up with cultural identity and political power that its fortunes lie at the very heart of the apocalyptic changes occurring in eastern Europe, and the shift in western Europe from public service broadcasting to market driven systems is causing deep anxiety, at least among programme makers.
Not that a newcomer to

broadcasting would have divined this from the programmes on offer in the viewing and listening rooms of the shabbily splendid Palazzo di Colorno, just outside Parma. Not immediately, anyway. The autumn sunlight across the autumn sunlight across the valley of the Po caught the occasional flake of paint, drifting down from the wall paintings commissioned by Napoleon's wife, Marie-Louise, past television screens showing programmes which, to ol Italia hands, looked remarkably familiar.

True, old age has suddenly emerged as a dominant subject in documentaries throughout the industrialised world. True, the suffering and saintliness of women occupies more time than ever in drama from Croatia (Sestre, about the love between two sisters) to Japan (Shinengi Tori, about a woman's search for dignity) and the UK (Prime Suspect, about a woman who chooses to do a more-than-full-time job in the police force and the shopping as well and then exercises her female prerogative and complains that she has no time). True, programmes in the music and arts category, so often over-long in the past; seem abnormally – and, at a festival of this sort, mercifully - short this year.

But such changes acarcely seem to support the belief, shared by so many of the 900 people here to serve on juries, join in debates, or simply observe (well, yes, and to enjoy the Parma ham and the Verdi concerts) that broadcasting is about to plunge into a new age of ratings obsessed vulgarity. Most newcomers spending 10 days assiduously watching programmes for eight or nine hours a day, either in the viewing rooms or in the even more heavily used "On Demand" cubicles, such a feature of television festivals since the appearance of the video recorder, would probably have come away heartened.

Of course the Prix Italia is an event which studiously excludes the material forming the bulk of most television schedules: there are no game shows, sitcoms, chat shows, sport or news programmes here. However, even in the three prize categories drama, documentaries and arts

you might expect to find evidence of popularisation and trivialisation if the descent into the commercial maw is really as swift and precipitous as many in Parma were

asserting.
On the surface there seems little sign. The winner of the television arts prize, Anton Webern, from La Sept in France, is a relentlessly superior visual tone poem (in monochrome, naturally) which airily ignores the benefits of speech, providing no presenter, voice-over, or commentary of any sort. It can be properly comprehended only by those already well up on Webern -Prix Italia jurors for instance. Here is the face of old fashioned broadcasting at its most supercilious. Television is

a mass medium? So what? ITV's entry in this category, the "South Bank Show" on The Making Of Sgt Pepper was considered unremarkable; the sort of programme, said the jury, which a good broadcasting organisation ought to be making every

According to the president of the RAI, television is banal, repetitive and in retreat

week. Only the Russian juror wanted to give it a prize, on the grounds that, if screened in Russia, it would get the

highest ratings ever. The drama prize went to another French entry, La Controverse de Valladolid, a deeply worthy 16th century ecclesiastical courtroom drama about a post-Columbus debate among Catholics as to whether black people were men with souls or merely clever animals. In television terms it was less than remarkable but no one could deny its political correctness. The BBC won the documentary prize with a programme from the "Video Diaries" series, War. Lives and Videotape in which Nick Danziger recorded his own efforts to find a home for orphans in Kabul, and incidentally dwelled lengthily on wounded children screaming in hospital.

Apart from the topicality of Danziger's piece, none of the prize winners would have looked out of place at any Prix Italia in the last 20 years. So why the neurosis? Where is the crisis? So far it may be concealed but it is no fantasy. Even at this old, deeply civilised festival, the evidence is there, albeit under the surface.

Speak to the producers and you find that the arts entries are shorter this year because everywhere arts budgets are under attack. Arts programmes (apart from "unremarkable" productions such as the "South Bank Show") don't win ratings. Think carefully about the dramas and you realise that a In Tuesday's Business Books category dominated not so long ago by single plays, usually on serious social or political lined "The Confucian way to themes, now features a remarkable array of detectives book reviewed is How Chinese and a growing number of episodes from serials or mini-series.

of the festival itself and you discover that one of the chief reasons for coming here year after year - the integrity of the prize system, achieved by allowing a company to enter either a programme or a juroi in a given category but never both - has been torpedoed this year. Why? Because co-production is said to be so widespread that it was becoming impossible to enforce the old rule, in television if not radio. Thus the Prix Italia itself is falling victim to the globalisation of television. Even if people did not actually give prizes to their own programmes, there was a significant tendency this year for programmes from the jurors own companies to reach the shortlist. How could one

juror vote another's off the

Above all the evidence comes from the knowledge of the broadcasters and journalists gathered in Parma. The eastern Europeans tell you that the ex-communist societies do not want to switch to public service broadcasting with its collectivist, even statist overtones; too much like a chip off the old block. They want to go straight to the commercial marketplace. Even a buffer state such as Finland is shifting on January 1 1983 from its present system of running some commercial content on the public service channels to a mixed system with an entire channel for commercial broadcasting and the old public service people left to fill far more time with no more money.

The French are gloomy about changes which have already occurred in France and more pessimistic still about non-commercial broadcasting in the future. During the course of the Prix Italia Padulla, the president of RAL Italy's equivalent of the BBC, labelled television banal, repetitive, and in retreat. And of course it was impossible to find a British broadcaster in Parma who was not filled with foreboding about the changes beginning in the UK next January. The virtual unanimity of the ballef that the new market-driven ITV, red in tooth and claw, will drive down British programme standards is unique in my experience of reporting on the industry over the past 25 years.

That reporting has included coverage of previous Prix Italia festivals where public service broadcasters have felt under threat. This occasion, the 44th. is the first where there has been serious talk of the Prix Italia itself coming to an end because the broadcasting world in which it existed now seems to have the glow of sunset upon it. How ironic if the Prix Italia were to end as it began: as a select festival for high quality radio programmes.

#### Rebuilding the Labour party

both the party machine and the

shadow cabinet. Labour is Mr

Smith's to take in a direction of

his choice. In his first conference

speech as leader yesterday he pro-

claimed that the route he favours

There is much for Labour to do

if it is to have a hope of reaching

that destination. It must cut its

unions; Mr Smith was equivocal about that. It must find a way of

expressing itself that allays the

fears of those who believe that Labour will impoverish them. Then a set of policies to improve

people's lives must be selected and

this must look better than the gov-

ernment's. Mr Smith has hardly

had time to commence this large

task so it is not surprising that

yesterday's speech amounted to an interim repackaging of the

manifesto upon which the last

its central feature was an affir-

mation of the party's belief in "active government", a phrase which, if it means anything differ-

ent from old-fashioned interven-

tionism, was not explained.

"Active government", it appears.

would provide better housing,

training, education and environ-

mental protection, an "efficient

and caring" health service, a fairer system of industrial rela-

tions, a minimum wage, constitu-

tional reform, positive discrimina-

tion, help for working mothers and the rescue of the coal indus-

try. It would also, no doubt, imple-

ment such recommendations as

emerge from Mr Smith's "special

commission on social justice". The

latter reflects his creditable nas-

sion for meeting the needs of the

This not unfamiliar menu cer-

tainly presents voters with a

choice. The Conservative aim is to

decrease the remit of government;

Labour's unashamediv to extend

it. No one could pretend that the

Tory endeavour has been wholly

successful, but that is not in itself

an argument for the "active" alter-

native. What Mr Smith needs to explain is why officials can do bet-

ter than private individuals -

and, indeed, what guarantee there

is that more government will not

merely make matters worse. It cer-

tainly did in the 1970s.

worse-off section of society.

election was lost.

is towards electoral victory.

Creditable passion

principal opposition party has two functions. Its day-to-day duty is to harry the government, challenge its proposals, expose its shortcomings, make parliamentary life difficult; in short, to oppose. Its longer-term reason for existence is to stand ready as an alternative government, thus providing the electorate with a choice when the term of the administration currently in office expires.

Less than six months after its shattering defeat in the April election the British Labour party is beginning to look as if, a summer of disappointment behind it, it is ready to fulfil the first of these purposes. It is well prepared to make a thumping nuisance of itself. Its new leader, Mr John Smith, displayed his reknowned forensic skills in a blistering attack on the prime minister in the House of Commons last week. Where Mrs Margaret Thatcher towered over Mr Nell Kinnock, and the latter was at best evenly matched with Mr John Major, It is the Labour leader who now commands the House and the prime minister who must strive for its full attention. It is Mr Smith who can proclaim, without qualification, that it has always been his firm conviction that Britain's future lies in Europe; and Mr

Open stage

A parliament in which the government's majority is slender and the governing party divided presents a strongly led opposition with an open stage. It is Labour's good fortune that in Mr Smith it has a leader whose ability to perform upon such a platform is unquestioned. The degree to which victories in the cut and thrust of Commons debate impinge upon the lic is unpredictable, but it is reasonable to assume that a long period in which the leader of the opposition shows up well in the House will have a beneficial effect

upon the standing of his party. Mr Smith is also in a position to demonstrate that he leads a united force, again in contrast to the hapless Mr Major. At the Labour conference this week Mr Smith's closest colleagues won positions on the executive committee, while his strongest opponents lost out. Unlike many previous Labour

ignored or unofficially rubbished

by the council's permanent members. And he himself had got into

an unseemly wrangle with the

Europeans over the management

of the conflict in Bosnia-Hercego-

vina. He complained that the EC had negotiated a handover of

heavy weapons to the UN without

consulting the UN itself, and

accused rich nations of starving

the UN of funds, yet expecting it

to use a disproportionate share of

its resources on conflicts in their

own part of the world - at the

expense, for example, of Somalia. Since then, the EC and UN

peace efforts in Bosnin have

merged, under the apparently har-

monious co-chairmanship of Lord

Owen and Mr Cyrus Vance, The

UN force there has been increased,

with EC member states providing

troops at their own expense. A force has also been sent to Soma-

lia to protect the distributors of

fnod. And last week, in the new session of the General Assembly,

several of the permanent members

had encouraging things to say about Agenda for Peace.

President George Bush

suggested a special Security Coun-

cil meeting to discuss the report

and "develop concrete responses". That was widely seen as an elec-

tion gimmick, but at least Mr

Bush accepted the idea that mem-

ber states should train military

units specially for peacekeeping

and humanitarian duties and keep

them available on short notice for

the secretary-general's use. He

also spoke of co-ordinated com-

mand and control, multinational

training exercises, logistical sup-

port, stockpiles of resources, intel-

ligence capabilities and "adequate,

The last point is a very sore one.

Demand for UN peacekeeping

operations (PKOs) has been

expanding rapidly, and the total

cost will soon reach \$2.7bn a year.

The five permanent members are

equitable financing".

Election gimmick

The cost of

peacekeeping but the US is currently \$209m in UN secretary-general, should be feeling a good deal happier this arrears and Russia - whose for-eign minister declared his support week than he was last July. Then his term of office seemed to be for Mr Bush's proposals - \$282m turning sour. An Agenda for By "equitable" Mr Bush no doubt meant that others should pay Peace, the report on conflict prevention and peacekeeping he sub-mitted in June at the Security more, though he did say the US would "review how we fund peacekeeping and explore new ways to Council's request, had been either

#### Think differently

"I do believe," he added somewhat plaintively, "that we must think differently about how we ensure and pay for our security in this new era." The remark may have been addressed partly to the US Congress. If so, not too much should be expected, given Mr Bush's track record of reaching agreement with that body.

ensure adequate American finan-

Japan is already footing the bill for the Cambodia operation, in addition to paying 12.5 per cent of the UN's regular budget roughly equivalent to the combined shares of three of the perma nent members: Britain, France and China. This fact was recalled yet again in his speech to the Assembly by Mr Michio Watanabe, the Japanese foreign minister, who suggested "serious' reform of the Security Council in time for the UN's 50th birthday in 1995. He was joined by his German colleague, Mr Klaus Kinkel, who asserted that debate on Security Council reform was already under way. "Germany will not take the initiative in this respect," he said. But "if a change in the council's membership is actually considered we, too, shall seek a permanent

Such remarks provoke irritation among the existing permanent members, ill masked by an indulgent smile. They tend to respond complacently that it will be very difficult to agree on any new composition of the Security Council, and that Germany and Japan have yet to show themselves up to the responsibility of permanent membership. But Japan has already amended its constitution and begun to contribute to PKOs, while Germany is preparing to do the same. It seems unlikely they will go on increasing their share in the costs of the organisation indefinitely, unless their great

power status is recognised.

"The exchange rate mechanism will reinforce our counterinflationary policies, help to provide the stability and certainty that industry needs, and set the right framework for a resumption of soundly based and non-inflationary growth."

John Major, House of Commons, Decober 18 1990.

\*I do not see that we could readily return to the mechanism without dealing with the problems that have been thrown up in the past fortnight. These need careful examination and consideration before we can decide made to work to the benefit of all its

John Major, House of Commons,

hat a difference two years make. when Mr Major put sterling into the exchange rate mechanism (ERM) on October 5 1990. Hopes collapsed when sterling was pushed out of the entry was abrupt, the exit no less

The ERM has run like a black thread through the garment of British politics. It precipitated the resig-nations from Margaret Thatcher's government of Geoffrey Howe and Nigel Lawson. It helped bring Mrs Thatcher down. Now it has devas-tated Mr Major, the chancellor who took sterling in and the prime minister who saw sterling forced out.

It is difficult now to recall the strength of the consensus in favour of ERM entry. There was the odd malcontent: Sir Alan Walters, for example. The then prime minister, Mrs Margaret Thatcher, was undoubtedly among them. But she was too enfeebled to resist a policy she had alway disliked.

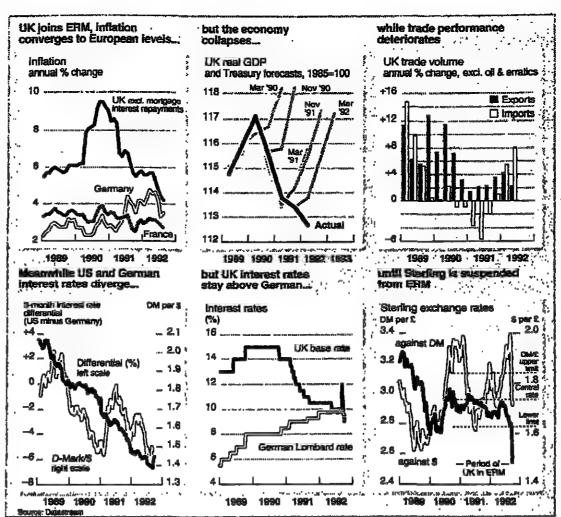

Those involved in foreign policy supported ERM entry because it sented a commitment to the UK's European future. People in business supported entry because it would provide exchange rate stability. Those responsible for economic policy supported the ERM because it would, they hoped, end a series of policy disasters.

Several influential policymakers Nigel Lawson among them regarded the targeting of broad money as the god that had failed. From the mid-1980s onwards, they judged the exchange rate to be the best monetary indicator. This judgment was largely determined by the experience of falling inflation and a soaring exchange rate in the early 1980s, despite rapid growth of the broad money aggregates. In the autumn of 1985, Mr Lawson made an effort, then blocked by Mrs Thatcher, to obtain ERM entry at the exchange rate of about DM 3.75. Meanwhile, several senior offi-

clais in the Treasury and the Bank of England viewed the ERM as no more than a second-best method of running monetary policy. But Mr Lawson's erratic monetary policies convinced officials that a first-rate monetary policy - one run by themselves - would never be allowed to happen. Along with many others, they concluded that monetary policy was far too important to be entrusted to politicians.

there was an on why it was necessary to enter the ERM, there is also a view in the Treasury and the Bank of England on why sterling was forced out. The view is not identical to that of the prime minister and chancellor, who have focused their excuses on the allegedly unexpected events of recent weeks and their fervent complaints on the unhelpful behaviour of the Germans. The official view is Martin Wolf unravels the events behind the collapse of UK economic policy

# From delusion to devaluation

more subtle. Their story goes roughly as follows.

The timing of entry was not ideal, nor was the 1 percentage point interest rate cut that accompanied it. But both were dictated by political realities. In particular, entry could only come after the prime minister and the chancellor had both agreed to it. It also could come only when the conditions set at the Madrid summit of June 1988, which had demanded prior convergence of UK inflation on the EC average, could be plausibly reset in terms of prospective inflation. Finally, it was idged imperative for entry to come before the start of the EC's intergovernmental conferences on monetary and political union.

Notwithstanding the long-delayed entry, the first year to 18 months of ERM entry went well. Sterling remained close to its central rate. Interest rates were brought down cent on the eve of entry to 10 1/2 per cent in September 1991. The rate was cut still further, to 10 per cent, in May 1992. Meanwhile, inflation the lodestar of policy - was falling more rapidly than forecast.

Unfortunately, the better-thanexpected performance on inflation reflected the worse-than-forecast performance of the economy. In the first half of 1992 it was becoming

obvious, even to the government. that a severe conflict was emerging between the monetary policy required by ERM membership and that needed by the domestic economy. The "green shoots" of recov-ery were withering in the Bundesbank's monetary winter.

he unexpectedly weak performance of the UK economy was only one of three things that went wrong. The other two were the high Interest rates that were the Bundesbank's response to the inflationary consequences of German unification and the failure of the US economy to show its longawaited recovery.

It was not what the German and US economies were doing individually that mattered so much. What mattered more was the combination of the two. By autumn 1992, the UK though the rate against the D-Mark was near its floor, from short-term real interest rates at near unprecedented levels for a recession, and from a weak world economy.

With stagnation in the UK economy, the public sector borrowing requirement rising towards 6 per cent of gross domestic product and bound to go higher, and a current account deficit of 2 per cent of GDP in the midst of recession, something had to give. In the end, it was sterling's place in the ERM.

There were alternatives, at least in theory. The US authorities might have promoted domestic recovery more successfully. The German government might have taken more drastic action to put its fiscal house in order. The Bundesbank might have been persuaded to ignore the German monetary data. The French. might have agreed to a realignment, one that might, in turn, have persuaded the Bundesbank to lower German interest rates. But none of these things happened.

Alternatively, sterling might have been realigned, either on its own or with the lira. But since officials at the Treasury and Bank of England believed neither that sterling was overvalued against European cur-rencies nor that a partial realignment of the ERM would lead to sigrates, this option looked pointless to them. It seemed necessary to soldier on, instead, at least until after the French referendum on the Maastricht treaty.

It was understood that the French ferendum would make the more doubtful of the ERM parities difficult to preserve. In the event, the failure of central bank intervention to reverse the weakness of the doilar in late August, followed not long after by the risky and ultimately unsuccessful 7 per cent realignment of the lira on the weekend of September 12-13, set the stage for ster-

Unguarded remarks from senior-Bundesbank officials - notably those reported on the morning of September 16 from Helmut Schlesinger, the Bundesbank's president - simply put the match to the kerosene. Nonetheless, it did seem as though the Bundesbank was unaware of the dangers for the ERM posed by the French referendum.

n the event, the UK base rate increases were inadequate. What, after all, is a 5 percentage point interest rate increase against the likelihood of a 10 per cent devaluation by tomorrow morning? The government simply ran out of money and out of time. For some in the Bank of England, this disastrous dénouement even came as a relief.

Does this official view make sense? Only up to a point.

First of all, the government had no strategy for dealing with the aftermath of the French referendum. It is now clear that France had no intention of realigning the franc. Also, a sterling realignment on its own, while helpful in dealing with the evident overvaluation against the dollar, would have done. nothing for the equally pressing problem of the interest rate.

Second, while the tactics probably made little difference to what became an unsustainable policy, serious tactical errors were made. Among the most important was the failure to deal sensibly with other ERM members. To enter at a rate the Germans thought ambitious was risky; to hector them was foolish; and to suggest that the UK's failure was reason for suspending the ERM was at least cheeky.

Third, economic events were unfortunate, but not unforeseeable The Treasury failed to understand what had happened to the UK economy during the second half of the 1980s. It failed to foresee the onset of recession at the time of ERM. entry. In both failures it was in the company of most analysts, but not,: in fact, of all. Furthermore, the Treasury has never accepted what seems evident to many outside observers, that sterling's real exchange rate was seriously overvalued from the beginning, as is clearly suggested by the UK's trade performance, As for the supposedly. unforeseen effects of German unification, UK officials needed only ask Karl Otto Pohl, the former Bundesbank president, for his view of the consequences of the errors his goverament had committed before starling's entry into the ERM.

More fundamentally still, these mishaps are not independent of the decision to fix exchange rates. It was partly because of the attempt to keep sterling down in 1987 and early 1988 that the UK entered the ERM with a buge debt overhang. It was also ERM membership that made it impossible to respond to unfolding economic circumstances. Inflexibility is, after all, the heart and soul of the mechanism.

What then is the main Jesson? It is that there are no magic wands, certainly not entry into the ERM on its own, probably not the ERM at all. The happy mishap of exit from the ERM gives the government another chance to find the long-term policies and institutions that will give the UK sustained. non-inflationary growth. But for now at least, the government has lost its policy and the country has lost its way.

#### India's dam-busters

Environmental concerns threaten the future of a \$3bn World Bank development project, writes Stefan Wagstyl

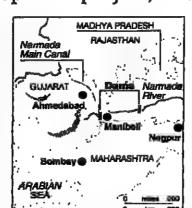

thatched huts, muddy river banks and an ancient stone temple, will tomorrow top the agenda at a World Bank meeting in Washington. The bank's directors are due to debate the future of one of the bank's most controversial largescale development projects - the construction of a huge dam across the Narmada River in north-west-

The \$3bn (£1.73bn) project will supply drinking water to about 30m people through a 75,000km network of canals, the world's largest, and generate torrents of electricity. However, it will also flood – partly or completely – land belonging to some 240,000 of India's poorest people. They include tribal villagers, such as the inhabitants of Manibeli, which is located on the Narmada in Maharashtra state.

Most of the 230 families of Manibeli have already moved out to resettlement sites purchased by the dam authorities. But most of the 30 or so who remain say they are ready to drown rather than move from their land or the surrounding forests which provide them with food, firewood and medicinal herbs. Mr Narayan, the 45-year-old headman, says: "We will not leave; our parents are buried here."

The villagers' stand has brought to a head the long-running battle over the dam's construction. Critics, led by environmental lobbyists, want it stopped on the grounds that too little consideration has been paid to the protection of local communities or the environment. Supporters - including the World Bank say the benefits outweigh the costs and that displaced villagers are being resettled on better terms than in previous scheme

The project was first discussed as long ago as 1946 and the foundation stone was laid by Jawaharial Nehru. India's first prime minister.

in 1961. However, the scheme was delayed by protracted disputes between the three states through which the Narmada flows - Gujarat, Maharashtra and Madhya Pradesh. It was 1979 before they were Bank approved a \$450m loan.

By then, environmental lobbyists, both in India and elsewhere, were winning public support for their concerns about large-scale construction schemes. In 1986, Mr Rajiv Gandhi, the late prime minister. acknowledged that India's big dams had failed to deliver the promised benefits. "Perhaps we can safely say that almost no benefit has come to the people from these projects."

Mr Gandhi and the World Bank saw the Narmada scheme as a chance to learn from past mistakes. They insisted the three states leading the scheme compensate displaced villagers in ways which safeguarded their economic and social well-being. They also demanded a detailed environmental master plan-However, even though large-scale

construction started in 1989, the three states failed to meet the conditions imposed upon them. A trickle of complaints from environmental activists became a flood, and last year the World Bank ordered

an unprecedented independent review by Mr Bradford Morse, a US development ald administrator. Mr Morse's report, delivered this summer, shocked the bank. He concluded that most of the environmental lobbyists' complaints were justified. "The projects as they stand are flawed; resettlement and rehabilitation of all those displaced by the projects is not possible under prevailing circumstances, and the environmental impacts of the projects have not been properly considered or adequately addressed," Mr

He expressed particular concern about compensation for those villag-ers whose rights to land had never been recorded and about the continuing absence of any environmen tal master plan. Mr Morse stopped just short of recommending abandoning the project.

World Bank experts accept many there is time to make improvements before the main dam's completion in 2000. The three states make the same point, adding, belligerently, that the dam will be built with or without the World Bank.

The bank's directors are unlikely to abandon the main dam and canals when they met on Thursday. But they could well refrain from funding other dams the states plan along the Narmada. And they could insist that Mr Morse's objections are met before more bank money is spent on the scheme.

That will not entirely satisfy the Manibeli villagers. But they will have the comfort of knowing they have secured better compensation than they might have thought possible even a year ago, Moreover, they will have helped to force a wholesale reappraisal of the project and, by extension, of the value of

large-scale irrigation schemes everywhere. As a World Bank official in India says: "We have learnt

the barriers down. At this AFFAIRS moment in British history, a commentator can no longer take refuge in his "spe-cialist" role. It is a time when choices have to be made.

I am not qualified, in any specialist sense, to pass an eco-nomic judgment on Britain's exchange rate mechanism. Nor would I deny that political ambitions are doomed to failure if they ignore economic realities. But I believe the choice facing the UK govern-ment in these crucial weeks is more important than any technical issue about the management of the exchange rate.

Until two weeks ago Mr John Major's name stood for something, not only in Britain but in Europe: He was the chancellor who

had persuaded the then Mrs Margaret Thatcher to bring the pound into the ERM. Too late, perhaps. At the wrong rate, it now seems almost certain. But he did it.

· He was the leader to whom his party turned when Mrs Thatcher's position, largely because of her anti-European ism, had become untenable. He was the prime minister who promised to put Britain at the heart of Europe, who forged a new working relationship with Chancellor Helmut Kohl, and who blessed the alliance of his party with the European Parliament.

 Finally, he was the man who negotiated and accepted the Maastricht treaty. Admittedly he did so in the

run-up to a general election, with many anxious backward glances, He earned, in those negotiations, the sobriquet of "true Euro-sceptic" bestowed on him last weekend by Mr

He fought, in alliance with the French government, to expunge all traces of federalism from the proposed European Union, thereby ensuring that it would be less democratic and probably less effec-tive than it might have been. He insisted on reserving Britain's final decision on joining the monetary union until a later stage in the process. And he set his face so firmly against any social dimension of the Union that, in the words of one Conservative MEP: "If they'd put a blank sheet of paper headed Social Chapter in front of him and left him to fill it in for himself, he still

wouldn't have signed it." This, of course, was so that he could return to London claiming victory. "Game, set and match for Britain," he pro-claimed, making many of us John Major cannot afford to put entry and Maastricht ratification with conditions, than to off the crucial decision on the UK's future role in Europe

wince. But it was all good politics: a means to the end of ensuring that Britain was at last accepted by the rest of the EC as a wholehearted, if sometimes difficult, partner.

Now that achievement has been, to say the least, thrown into doubt. It is not all Mr Major's fault. He was not helped by the Danish referendum result - though with hindsight he must surely regret not pressing on regard-less with Britain's parliamentary ratification process and getting it out of the way. He was not helped by President lamentably to seize the oppor-tunities offered by Germany's unification boom - with the result that Britain was less able than Holland or France to sustain the high interest rates imposed by the Bundesbank to choke the boom off. So a realignment within the

British industry, which failed

ERM would have been an acceptable, if in some respects regrettable, response to what had become a very bleak economic position. Pulling out of the ERM was harder to reconcile with Mr Major's European reputation, but that reputation

#### If they'd left Major to fill in a blank Social Chapter for himself, he still wouldn't have signed it'

François Mitterrand's decision to hold a referendum in France, which may have seemed like a purely procedural issue in early June but, by late August, had generated enough uncertainty to throw the currency markets into turmoil. And he was not helped as much as he might have been by the Bundesbank, which not having been consulted about the exchange rate fixed in 1990 - was neither convinced by it intellectually nor committed to it morally. He was not helped, either, by

can still be retrieved if he confirms unambiguously that this is only a temporary measure. and above all if he commits himself clearly to getting Maastricht ratified by the British

parliament as soon as possible. That may be what he thought he was doing in his speech in the Commons last Thursday. But outside the House the blast of the trumpet has come over as a weak and feeble sound. It seemed as if Mr Major was more concerned to delay or at best avoid the issue, by hedging both ERM resummon his supporters for a decisive struggl

Meanwhile Mr Norman Lamont has continued banging his new-found nationalist drum. He has staked out a supposedly independent British monetary policy which, if it means anything, means that Britain will henceforth give a lower priority to the fight against infla-tion; and he has engaged in an unbelievably puerile war of words with the Bundesbank

Emulating the unjust steward in the gospel, Mr Lamont has been trying to save his career by making himself "friends of the mammon of unrighteousness", among the fiercest critics of what was until a fortnight ago the be-all and end-all of his economic policy. By yesterday things had reached the point where, in order to placate these newfound friends, he was obliged to disclaim any intention of apologising for his intemperate anti-German remarks,

Two weeks ago Mr Major was honourably unwilling to make Mr Lamont the scapegoat for the failure of a policy to which he himself was equally committed. That was rather quixotic even at the time - especially in view of his willingness to throw Mr David Mellor to the wolves for far more trivial reasons. But Mr Lamont's position has now become completely untenable. Given his constantly

repeated anti-devaluation stance before September 16 he cannot credibly present him-self as the architect of an entirely different policy. But equally his statements since then are incompatible with any attempt to retrieve even the shreds of the government's European policy and the prime minister's reputation.

Mr Major's instinct is, it seems, to play for time, in the hope that he can avoid splitting his party by extracting new forms of words from his European colleagues. He may even hope that, if he waits long enough, Maastricht will collanse under its own weight. That instinct is wrong. Even

if it enables him to remain prime minister (which is far from certain), it will be only as Mr John Smith so felicitously put it - as the "devalued prime minister of a devalued government" and indeed of a devalued country.

Maastricht is not perfect. It may have to be augmented, reinterpreted or even revised. But Mr Major can only argue that case within the EC if it is absolutely clear that he is not trying to wriggle out of the commitment he gave last December. If he wants Britain ever again to be taken seriously in Europe he must make up his mind now, remind the world what he stands for, and insist that his party follow him or choose another leader.

#### Public sector pay limit represents Drowning Germany desperate ploy rather than solution

From Mr David Pelly. Sir, The government, cur-

rently standing amid the ruins of its economic policy, has now latched on to a 2 per cent limit on public sector pay as a vital element of economic recovery. The CBI has followed up with a cry for a public sector

Your leading article on the subject (September 25) heartily endorsed such an approach while failing to identify more precisely what the costs and

benefits might be. Assuming that the total public sector pay bill amounts to about £70bn, a reduction in pay awards from perhaps 3.25 per cent next year to 2 per cent would cut the pay bill by some £800m; a not insubstantial amount that might be put to good use elsewhere.

However, this figure should be put into perspective. It catch up with their private sec-would amount to only 0.3 per tor counterparts. It would not

cent of the government's lead employers in the private planned spending next year and would only reduce the PSBR by about 0.2 per cent of GDP. Its material impact on the underlying problems of the economy would therefore be minimal

Furthermore, the costs of nforcing such a limit would

be high.
It would wholly undermine the existing systems of pay determination in the public sector and provoke unrest at a time of relative stability.

It would demotivate public servants when the government is ostensibly trying to encourage better performance from them. It would undermine attempts to improve public services. Unless applied in perpetuity it would lead to public sector workers pursuing higher claims in subsequent years to

#### OBSERVER

#### Vestey takes the helm

■ It says something about the paucity of talented admirals n Britain's sinking shipping industry that Edmund Vestey, shy chairman of the family's Blue Star line, has been refloated as president of the Chamber of Shipping. It is 11 years since he last

held the job and he had to be press-ganged into serving again. After all, his own somewhat, not to mention the distraction of being chairman of the Masters of Foxhounds

There simply aren't enough British shipowners to go round these days. At least Vestey's fleet is near 50 ships and still expanding, whereas rivals such as Ben Line, Port Line, Shaw Savill, Ellerman and Blue Funnel have sunk from sight.

The UK-owned and

registered fleet has shrunk

from 36m dwt to 3.6m dwt since Vestey was last president, and the number of eafarers has fallen by two thirds. Presumably Vestey will follow his predecessors by angling for tax breaks, albeit probably with no more success. Indeed, the fact that his own shipping business has prospered undermines the case for tax perks. Far better to seek a few entrepreneurial recruits for the chamber's declining membership. And

how about abolishing separate

ranks? That might catch the

elusive knighthood.

PM's eye and ensure Vestey's

ses for officers and other

Changing gear ■ If there is any doubt that grandsons who inherit the family business can do better than their ancestors, then the career of Italy's Gianni Agnelli

proves otherwise. After spending 25 years at the helm of Fiat, Italy's biggest private sector company, and over half a century as a director, Agnelli has finally announced he will hand over the wheel in 1994.

Flat's fortunes have prospered under Agnelli, but with the domestic economy souring and Fiat's share of the domestic car market now in steady decline, L'Avvocato, as he is known, may have decided he could hardly bend Fiat's rules which forbid anyone who is 75 during his term of office from standing for re-election.

However, Agnelli is handing over to his brother Umberto, 13 years his junior, because he says his own son, Edoardo, is not a businessman.

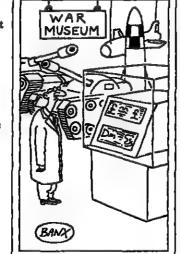

Open secret ■ The latest organisation chart

from Her Majesty's Treasury shows that a C Farthing is in charge of division one of the Treasury's banking group, and M Perfect is handling running costs in the management policy division. But should local government finance be in the hands of R Bent...?

#### Fundamental

■ George Soros, the Hungarian-American investment guru, has just hired another economist who knows Capitol Hill and the international economic policy-makers circuit as thoroughly as he understands Wall Street

Robert Johnson, a foreign exchange specialist from Bankers Trust in New York, is also a former chief economist of the Senate Banking Committee and is the sort of forex expert to make chartists nervous. In the recent Euro-turmoil.

it is those plugged into the policy-making scene who have been able to make the most of the central banks' discomfiture - and hedge funds, such as those in the Soros stable, have increasingly been on the look-out for economists who can span both

It is also the hedge funds in particular that are understood to have had a field day in the past few weeks -though Johnson is of course not prepared to give anything away on that score.

#### Unfair view ■ Red faces at the Institute

of Chartered Accountants in England and Wales yesterday. Three academics it had sponsored to carry out research on the role of auditors came up with the wrong result.
The daring dons did not

exactly stick to the party line, suggesting instead that audit regulation should be wrested away from the Institute to an independent "office for auditing" (Offaudit?). Rather than blaming the public for the so-called

"expectations gap" - the difference between what is expected of them and what they actually do - auditors should actually extend their responsibilities to include the letection of material fraud. More radical still, says the

report, auditors should be appointed and their fees ermined externally, and not by those on whom they are reporting - the directors The Institute could hardly

be said to have presented a "true and fair" view of the contents of the report. In the accompanying three-page press release, it only mentions these recommendations halfway down the second page though they come bang at the front of the actual report and then rebuts them at equal

#### Servicing ■ Liam Strong, chief executive

of Sears, tells a story

illustrating the business of building customer loyalty. A friend of his wanted to buy a car and looked at Toyota's Lexus. But he bought a BMW. The Lexus sales manager called by and asked how the BMW was. "Fine," said the friend, "except for the oddest thing: it came without an ash-tray and I'm having the devil of a job finding one. Two days later a Lexus rep delivered a BMW ash-tray to the friend's house, with a compliments slip from the

Defence minister says government would consider a solo programme

#### UK may act alone on Eurofighter

By David White, Defence Correspondent, in London

BRITAIN WOULD consider producing the European Fighter Aircraft on its own if Germany, Spain and Italy quit the project, Mr Jonathan Aitken, the defence procurement minister, said yes-

His statement was the first firm indication from the British government that it might be prepared to contemplate a solo pro-

Mr Aitken sald Britain would first need to study the cost implications and warned that a onenation EFA would probably be more expensive. However, it was wrong to assume that the UK a negative or hostile view, he in the programme."

He expected the project to maintain strong backing from the Department of Trade and Industry and the Department of

Employment.
The Ministry of Defence did not accept the argument that a less capable aircraft might suffice.

Mr Aitken said he remained "reasonably, cautiously optimis-tic" there would still be some collaboration on the programme even if Germany stuck to its decision not to stay with the project into the production phase.

Neither Spain nor Italy had ruled out trinational production, he said. "It is simply that they are endeavouring to find a basis on which Germany might remain

Defence ministers from the four countries are due to decide the project's future at a meeting in late November following the completion of studies into cost reductions and a review of military requirements.

The confidential quotation that industrial partners submitted in April for EFA's production phase was much higher than expected. Mr Aitken said. He added: "We simply have to get the costs back

Speaking at a defence industry conference in London organised by Westminster and City Programmes, he warned that any delays in the timetable would ocrease production costs.
The alternative, lighter aircraft

cheaper to make, but would involve repeating much of the £5bn (\$8.5bn) worth of development work done on EFA.

"The eventual cost could well turn out to be higher, and entry into service certainly later," Mr Aitken said.

If Britain were left alone in the EFA project, he said, savings could be made by rationalising facilities, and the cost per air-craft might not be greatly

Mr Aitken's comments followed notification from Germany reserving its right to withdraw from EFA development work, in which it is still involved, as early as next February.

#### **Bank of England** chief urges rein on fiscal policy

UK economic policy and reform plans for ERM still not finalised

MR Robin Leigh-Pemberton, governor of the Bank of England, yesterday warned the government against letting the pound slip too far and loosening fiscal policy in a bid to speed recovery. Mr Leigh-Pemberton spoke as it became clear that the UK government is still a long way from finalising its domestic and European economic policies, including plans it might have for the Euro-pean exchange rate mechanism. According to Treasury officials, the UK has yet to draw up detailed proposals for reforming the ERM. A similar gap exists in the case of monetary policy, where the government has given

a key speech on October 29 to flesh out the details of the British monetary policy outlined by Mr Lamont in Washington 10 days Mr John Major yesterday insisted that there would be reform of the ERM, despite the apparent rejection of the idea by European Community finance

itself until the chancellor makes

ministers in Brussels on Monday. Speaking in London, the prime minister underlined that the "faultlines" in the mechanism would have to be corrected before the UK would consider rejoining the ERM. It was not simply the UK that had experienced the problems of the ERM, but Spain, Italy, Ireland and France too.

Mr Leigh-Pemberton's carefully veiled remarks came in a speech on international monetary co-operation before the British-American Chamber of Commerce. They helped lift the pound on the foreign exchanges to DM2.5272 at the close as financial markets interpreted his remarks as warning against further further sharp interest rate cuts in the UK. Sterling had earlier threatened to slip below the

DM2.50 level. More explicitly, Mr Leigh-Pemberton hinted that Germany should cut interest rates to help growth in Europe.

His comments that the UK could not afford to ignore the exchange rate highlighted the need for the government to clarify its economic policies both at

home and abroad.
The need to find some way

through the apparent impasse on ERM reform is likely to dominate Mr Major's round of discussions with other EC heads of government today and in the run up to the emergency summit of EC leaders in Birmingham on October 16. Today be sees president François Mitterrand in Paris before talking in London with Mr Poul Schlüter, the Danish prime

Yesterday Mr Major was still hopeful that Britain's EC part-ners would back his call for ERM reform. "Those faultlines need to be addressed," he said. "I know that, our European partners know that, and they will acknowledge that and work will

need to be done on that."

But UK Treasury officials admitted that Monday's meeting of EC finance ministers in Brussels "had not got down to specifics" and played down suggestions that the planned Birmingham summit would be the occasion for significant decisions on the

future of the ERM. Financial markets are still in the dark about how Mr Norman Lamont, the chancellor, will set monetary policy. In Washington, he promised a tight policy that would "give weight to a number of financial indicators" including narrow and broad money growth, asset prices and the exchange rate. Although sterling and the London stock market gained yesterday, foreign exchange dealers and analysts were yesterday reluctant to predict continuing stability in the absence of more detailed statements from the government before the end of Octo-

The prime minister's priority yesterday was to play down the continuing split in the Tory party over Europe. He dismissed the divisions as "froth and bubble" which he would not allow to dis-

But the split was given new impetus by Lord Tebbit, the for-mer cabinet minister, who in a newspaper article said that Mr Major had been wrongfooted in his efforts to take Britain to the heart of Europe.

#### Demand falls in German engineering

ORDERS for German engineering products continued to fail in August, reinforcing both machinery makers' fears of a real 5 per cent fall in production this year and more widespread concern over the threat of recession.

The value of new contracts for machinery and plant signed during the month was 9 per cent down on the same month last year, the VDMA manufacturers' association said yesterday.

A three-month comparison, less prone to distortion by short-term factors, showed new order intake to the end of August down 12 per cent on last year.

The same measure at the end of July showed an 11 per cent year-on-year slump.

Meanwhile, a survey of 3,000 medium-sized companies concluded that German economic growth would fall 0.5 per cent in the next six months. After stagnating for the past

'aiready on a recession-like downtrend," said Mr Jürgen Kölsch, chalrman of the Federal Association of Young Entrepreneurs (BJU).

Plant utilisation among members surveyed had fallen from 90 per cent of capacity to 85 per cent within six months and was expected to fall further to 83 per cent in the next six.

The machinery and plant industry, which shares top posi-tion in the German exporters' league with vehicle makers, is already shedding 80,000 of its 1.15m workforce this year. Those plans were based on spring fore-casts, which suggested total output would fall this year by only 2 per cent. This has since been revised to a 5 per cent drop.Mean-while, Porsche, the luxury sports car maker yesterday announced plans to cut its 8.000 workforce by a further 1,000.

#### Bosnian aid flights Allianz can keep stake

Continued from Page 1

Franco Tudjman, the Croatian president, and Mr Dobrica Cosic, the Yugoslav federal president, while in Geneva.

Although most members of the UN Security Council, including the US, the UK and France, have strong reservations about using military aircraft to enforce a "nofly" zone in Bosnia, Mr Hurd believes that the idea is worth pursuing by other means. The UK favours a solution under which UN monitors would be stationed on Serbian airfields to control military aircraft sorties.

Mr Hurd will also discuss with Mr Vance and Lord Owen ways to get humanitarian aid flights

Meanwhile, the UN said yester-day that two of its helicopters were fired on yesterday but landed safely at Zagreb airport with no damage or casualties. Mr Cedric Thornberry, UN civil affairs director, said that the incident may have been accidental. keepers tightened security and

in eastern Croatia, UN peacewarned they would use force if necessary to stop thousands of Croat refugees marching on their former homes in Serb-held territory. The march, planned to take place on Wednesday, could reig-nite the Serbo-Croat war, a UN

Continued from Page 1

when it first told Allianz to reduce its stake in the bank to just over 19 per cent.

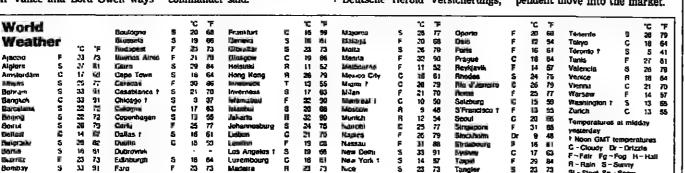

The cartel authorities cited Deutsche Bank's and Assurance Générales de France's (AGF) recent purchases in the German life insurance sector as proof that acquisitions by large, financially strong institutions, had intensified competition. This ensured that Allianz no longer had a dominating market position, the Bundeskartellamt said.

At the beginning of this month Deutsche Bank announced the purchase of a controlling stake in Deutsche Herold Versicherungs,

a family-controlled insurance group, and in July it bought a 30 per cent stake in Gerling, the largest privately owned insurance company in Germany. The Gerling deal received cartel approval yesterday.

The authorities said another reason behind the change of heart was that Allianz had reduced its direct holding in Hamburg-Mannheimer Lebensversicherung, Germany's second biggest life insurance company.

The basis for the original ruling was that Allianz dominated the German life insurance sector and could block Dresdner's independent move into the market.

#### THE LEX COLUMN

#### Freedom's limits

Mr Norman Lamont may have been moved to sing in his bath by the policy freedom conferred on Britain by devaluation. Yesterday's clutch of economic data suggests that freedom may be illusory. The savings rate remains depressingly high, while foreign investors were selling gilts hand over fist as pressure on sterling mounted in

The drop in the savings ratio to 10.3 per cent from 11 between the first and second quarters seems initially encouraging. But if the first quarter was distorted upwards by bonus pay-ments ahead of the election, the sec-ond quarter was certainly distorted downwards for the same reason. The underlying trend still points to consumer debt aversion. Sears and King-fisher have just reminded us there is no sign of a revival in consumer demand. That must wait until the housing market recovers, which, in turn requires yet lower interest rates. How overseas investors might react

to an even weaker pound is another matter. They bought £6.3bn in gilts in the year to July and sold £1.3bn in August. So they still have plenty left to sell. True, there is no immediate funding need, but that will not last. Before the government went into sur-plus in the late 1980s, gilts investors generally required a premium of more than 3 percentage points over German

bond yields. It is now just 1.6 points.
Since sluggish world growth will keep export markets weak, recovery still has to be consumer-led to some degree. One tactic could be to cut interest rates sharply now. The authorities would have to hope sterling had stabilised and recovery was in place by the time funding had to resume in any quantity. But that would be a gamble to say the least. It will take luck and a measure of cour-age bordering on the reckless to gener-ate much growth out of the new envi-

#### Freia Marabou

The fallure of Freia Marabou's share price to match the Jacobs Suchard NKr 450 offer suggests uncertainty about whether the takeover will be a pushover after all. In political terms, Jacobs' position is akin to that of Nestlé when it bid for Rowntree. Hershey is still waiting in the wings and has the advantage of already bolding an 18 per cent stake. It has a long-standing connection with Marabou. By teaming up with a local company, Orkia, it could more easily overcome Norwe-

FT-SE Index: 2565.5 (+5.5) Share price relative to the 120 -

gian resistance to foreign ownership of a flagship company, although it has been talking about a lower price. A more likely explanation for the 6 per cent share price discount to the bid is the time value of money. Jacobs needs time to clear administrative hurdles. While the outcome is by no means certain, its ultimate parent, Philip Morris, has the resources to put

up a powerful fight.

Besides, it is questionable whether Hershey could justify paying a multiple of some 25 times for a business with only limited value as a bridgehead into Europe. Marabou has more exercise related to Support Net color. strategic value to Suchard. Not only would it gain an advantage over Mars and Nestle in the Scandinavian mar-ket: Marabou's Daijm is a high-margin bar product in a segment where Suchard is weak. The Marabou acquisition would thus add to its range in Europe as a whole. If that is Suchard's strategy, Cadbury Schweppes could have cause for unease. Its European pros-pects would become less exciting still.

#### Sears

It seems the market wants to fall in love with Sears. Having missed the boat with the likes of Storehouse and Next this year, fund managers are determined to be aboard any recovery stock in the stores sector. After Sears interim figures, brokers have a nice story to sell them. A cut in the interim dividend by a third to 1p follows hard on the heels of the painful and expensive exit from menswear retailing. Both suggest that the new chief executive, Mr Liam Strong, is determined to confront the company's problems. Even the reduced dividend provides

some underpinning for the shares. If the company pays a total of 3.5p as expected, they will still yield 6 per cent at yesterday's close of 80p.
But investors should not get carried

away. Down-at-heel British Shoe still has substantial difficulties and the 22 per cent profits fall at Freemans is alarming. Perhaps even more importantly, the whole group needs the magic of attractive new store presenta-tions and innovative retailing ideas, things which Mr Strong has yet to show he can provide. One may also wonder about an asset valuation of 83p a share made in 1988 when recent disposals have been accompanied by

Mr Strong has made a promising start, but he must be all too uncomfortably aware that attempts to change corporate cultures fail more often than they succeed.

#### Jefferson Smurfit

UK institutions are traditionally wary of Irish companies, and have every excuse to avoid them when they are barred from the Footsie. Even so, the market can hardly deny that Jeff-erson Smurfit's balance sheet is in fine fettle for a paper and packaging business at this stage in the cycle. ItsIC220m of net cash is in impressive contrast to the position of most of its Scandinavian and Canadian competitors, whose debt in some cases exceeds their turnover. Admittedly there is some \$2.3bm of off-balance sheet debt post the restructuring of JSC/CCA— but there is no recourse to Smurfit, and there is value in this US joint venture which may yet be cashed in.

The immediate challenge for Smurfit, though, is earnings, hit by the familiar problems of overcapacity and keen pricing in US and European markets. The company can only hope that its proposed linerhoard increase will be and that the proposed property of the state of the company can be supposed by the condition of the conditio stick, and that the pressures which have caused discounts of more than 30 per cent in North American newsprint really are starting to ease. But while the stronger dollar should also make an impact on the UK and Spain in the current half, profits are unlikely to be much more than E140m for the year

as a whole. The shares, down another 11 per cent to 228p yesterday, have been con-spicuously weak since the end of March. Earnings will rebound sharply one day, but the timing of recovery remains as clusive as ever. For the moment investors are unlikely to be

#### Porsche cuts more jobs to stay independent

By David Walter in Frankfurt

PORSCHE, the troubled German luxury car-maker, yesterday announced a swingeing round of job cuts, the second during the current business year, which it said were unavoidable if it was to preserve its independence over the long

At the same time, the company warned of deteriorating conditions in markets that had hitherto been strong, for example in Germany, Italy and

Japan, together with continuing prob-lems in the US and UK. It said export sales would be made even more difficult because of the recent

turbulence in Buropean currency mar-kets and strengthening of the D-Mark. The bleak statement, which gives the first indication of the circumstances leading up to the surprise replacement of Mr Arno Bohn as chief executive by Mr Wendelin Wiedeking last week, concluded by saying Porsche was expecting further falls in profits and sales during

the current business year, following sales down from DM3.1hn (\$2.08bn) to DM2.7bn in the year to the end of July.

Porsche explained yesterday that it intended to cut its workforce by a further 1,000 people this year, in addition to the 850 job cuts already announced. This means that during 1992-93 the workforce will shrink by almost a quarter from the

8,062 employees at the end of July.

The job cuts, intended to fail equally on all areas of the business, will go hand in hand with restructuring measures

designed to lead to a sharp improvement that led to Mr Bohn's departure because

"The management board has decided this package of measures is unavoidable if the company is to remain independent over the long term," the statement said, emphasising that the family shareholders who control the company were deter-mined to preserve its independence in spite of its difficulties.

The statement provided the background to the change of chief executives, but gave no clue to the precise problems ness policy" last week. In response to questions, the company said Porsche and Mr Bohn had agreed to keep quiet over

the circumstances of his departure.
Porsche said that in the year to the end of July it sold 22,481 cars, down from 26,486 the previous year. The share taken by exports fell from 61 per cent to 49 per cent, with unit sales rising by 9 per cent to 11,404 in Germany but falling by 30 per cent to 11,077 abroad.

The continental chocolate industry has been undergoing takeovers and blending, reports Guy de Jonquières

#### Hershey may launch counter bid for Freia Marabou

By Karen Fosell in London

HERSHEY Foods, the big US chocolates producer, is consider-ing a counter bid for Freia Marabou, the Norwegian confection-ery group which yesterday agreed to a \$1.5bn takeover offer from the US Philip Morris group.

Hershey is Freia Marabou's second biggest shareholder with an 18.6 per cent stake, acquired in May this year for NKr1.16bn (\$197.03) from Orkla, the Norwegian diversified foods group. The Philip Morris bid has to be

accepted by shareholders, who nary general assembly on Octo-The offer has to win two-thirds

backing by Freia's shareholders to amend the company's articles of association to allow the take-Philip Morris also needs approval by Norway's energy and industry minister, Mr Finn Eristensen, who said he will con-sider the sale on the basis of the

buyer's plans for the company. Mr Richard Zimmerman, Hor-shey chief executive, said yesterday in Oslo that his company

abou for \$1.3bz. Mr Zimmerman said Hershey's bid still held but the company was considering several options to gain control of Freia Marabou and has invited Orkla to co-operate in a joint solution to acquire

We contacted Orkla on Monday indicating our intention to explore opportunities to work together in the pursuit of Freia Marabou. They expressed interest in continuing these discussions," Mr Zimmerman said.

n the face of it, it seems slightly improbable that two leading US food companies should be competing to pay more than \$1bn for a medium-sized Nordic manufacturer of chocolate, snack and biscuit products which are almost unknown to consumers outside

Boandinavia.

However, the intensity of the contest between Kraft General Foods (KGF), part of tobacco manufacturer Philip Morris, and Hershay Foods to take over Freia Marabou of Norway is explained in two words: rarity value. in the last five years, Europe's

chocolate industry has undergone rapid concentration as manufacturers concluded that it was faster and less costly to expand across borders by acquisition than by struggling to build brands and win market share a few points at a time.

Today, two thirds of the European chocolate market is con-

trolled by five companies: Nestlé

of Switzerland; Mars of the US;

Jacobs Suchard, which is owned by Philip Morris; Cadbury Schweppes of Britain; and Fer-rero of Italy. With few companies left to buy, prices soar when a manufacturer with proven brands and a strong market position becomes available. KGF's \$1.5bn bld for Freia Marabou values the Norwegian

increased efficiency and scale is nates a regional market which questionable. "A business school has so far been hardly penetrated professor would conclude that a lot of big acquisitions are hard to justify on a cash-flow basis," says Mr Clive Richardson of London brokers Henderson Crosthwaite. The large acquirers are taking a

very long-term view." In acquirers' minds, however, such doubts are often overshadowed by the prospect of seizing unrepeatable opportunities. Mr Helmut Maucher, chairman of Nestlé, says the £2.5bn (\$4.4bn) paid for Rowntree in 1988 was worthwhile because the deal decided relative positions in the industry for the next 100 years".

by big multinational confectionery companies. It supplies a quarter of the biscuits, a third of the checolates and almost half the snacks sold in the four Nordic countries.

Hershey and Philip Morris have entered the bidding from different starting points. The for-mer has long had most of its sales in the US, where its chocolate is a brand leader, and recently began scouting for small-scale acquisitions in Europe. Apart from its 18.5 per cent stake in Freia Marabou, it has so far made one - Gubor

Philip Morris is already Europe's fourth largest food manufacturer, with sales of about \$8bn, and an extensive distribution network. Its operations there include coffee, cheese, dressings and pasta as well as chocolate.

If the Freia Marabou contest is decided simply on price, the odds overwhelmingly favour Philip Morris. Its net income of \$3bn last year exceeded Hershey's sales of \$2.9bn, and its tobacco business generates massive surplus cash.

Until recently, there had been doubts about the company's long-term commitment to chocolate. However, most analysts believe this week's bid has removed any uncertainty.
"Philip Morris has clearly sig-

nalled its intention to build an international empire in the business." says Mr John Campbell of brokers County NatWest. Whether or not KGF wins Frein

Marabou, the company is therefore likely to be on the look-out for further expansion opportunities in Europe.

Among potential acquisition

candidates, only three of any size remain: Ferrero, Lindt in Switzer-Britain.

However, Ferrero and Lindt are controlled by families which have shown no inclination to sell out. Cadbury has long been touted as a potential takeover target, but seems determined to resist preda-

Furthermore, although Cadbury's 30 per cent share of the UK chocolate market could be attractive to Suchard, which has almost no presence in Britain. the two businesses would be difficult to integrate.

Indeed, the two companies are believed to have abandoned discussions on a proposed joint venture last year after concluding that there was little scope for productive co-operation. Not only do their strengths in moulded chocolate overlap, but a "taste barrier" keeps continental demand for Cadbury's products

grantall. Even if Europe's second runk chocolate manufacturers retain their independence, they must contend with steadily flercer competition from industry lead-ers such as Nestlé, Mars and Cad-

ncreasingly, growth in the European chocolate market is A generated by transferring well-established brands internationally. Though national preferences in classic moulded chocolate differ widely, there is a growing convergence in taste for snack products and some speciality lines.

Nestle has led the way, aggres sively extending across Europe sales of Rowntree brands such as Kit-Kat bars and After Eight chocolate mints. Those are now made on the continent as well as

This is an enormously expon sive game, requiring powerful local distribution networks and lavish advertising and brand sup-

Among the smaller, nationallybased producers, only Ferrero has so far played it with any succers, largely because of its prowproduct innovation Though Cadbury has acquired chocolate makers in France. Spain and Germany, it has lacked the scale and resources to establish a strong market position in these countries.

Given the steadily rising stakes in the industry, the question fac-ing second-rank chocolate makers is whether it is worth persevering with ambitions to build a Europe-wide presence, or whether they should retreat to a more defensible home base.

#### Sears, Roebuck sells financial services units to reduce debt

#### By Patrick Harverson In New York

the company.

SRARS, Roebuck, the world's second-largest announced yesterday it was spinning off or selling a large part of its successful financial services operation in a huge restructuring that should reduce corporate debt. Analysts estimate the restructuring will cut debt from \$38bn to around \$16.5bn

Sears is selling its most profitable operations in the hope that. by reducing debt and concentrating on a few businesses, it will lay a secure foundation for its loss-making domestic retailing

The units Sears is selling accounted for 27 per cent of the

tion has lost market share to fast-growing discount chains and spe-

In the shake-up Sears will: Sell 80 per cent of its Dean Witter Financial Services subsidiary (which includes the highly profitable securities brokerage and Discover credit card operations) to shareholders and float the remainder on the stock market via an initial public offering (IPO) of stock;

• Sell to private or public interests all of its Coldwell Banker Residential Services group, which consists of the property brokerage and relocation businesses, Sears Mortgage Corp and Sears Savings Bank;

Sell a 20 per cent stake in its Allstate composite insurance sub-

core businesses: its big merchar dise retailing operation, and its 80 per cent interest in Allstate.

Mr Edward Brennan, chairman, said although Sears financial services businesses had been successful "a thorough asses ment of today's economic and business climate led us to conclude that refocusing our business strategy, changing our structure, and reducing leverage are all in the best interests of our shareholders and Sears".

The demerger will be seen as a victory for the large group of dis-sident shareholders who. unhappy with Sears' poor earnings performance, put forward a plan to spin off the financial services business at the annual meeting in May.

In New York, Sears shares rose

Cost reprieve for Eurotunnel

#### By Robert Peston in London

EUROTUNNEL is today expected to make important progress in its dispute with the Transmanche-Link (TML) consortium of building contractors over the costs of

Eurotunnel's 220 banks are expected to give the company an additional two months to continue its negotiations with TML over claims made by TML for

additional payments.
Separately, TML contractors
were last night braced for bad news from arbitration proceed-ings on whether they should continue to receive £50m (\$85.50m) a month in extra progress payments from Eurotupnel to cover

some of the cost-overrun. They were worried the arbitrator may rule that the £50m payments should be terminated. The monthly cash payments have been especially valuable to the UK contractors, which have been hurt by the building indus-

try recession. Eurotunnel was furious when an independent disputes panel ruled in March that the payments should be made and it appealed against the decision.

Since the disputes panel ruling, Eurotunnel has been forced by its banks to hold talks with TML to end the row over whether it or TML should bear the brunt of a sharp increase in the costs of building the tunnel. The banks had set a deadline of

early September for settlement of the dispute over the contractors' claims for more than £1bn in extra payments at 1985 prices. Eurotunnel failed to meet the deadline, so its banks have had to

vote on whether to allow Euro tunnel to continue drawing from its £6.8bn loan facility or whether to prompt a financial crisis, which could involve the banks taking control of the project.

The banks are voting or whether to allow Eurotunnel sufficient funds to continue meeting its obligations for another two months, while negotiations with TML continue. By yesterday evening, 100 banks had voted. An overwhelming majority - as measured by the value of their loans to Eurotunnel - had voted

to continue drawing on facilities. Eurotunnel needs a majority of only 65 per cent of votes cast However, for the vote to be valid, 112 banks have to cast a vote. Bankers said they were confident the remaining 12 would vote by today's 5pm deadline.

in favour of allowing Eurotunnel

#### Italian steel | UK retailer to close 350 shops group in deal with Lucchini

By Haig Simonian in Milan

II.VA. Italy's state-owned steel group which lost L498bn (\$407.6m) last year, yesterday announced its long-awaited joint venture for its loss-making long products division.

The deal marks one of the biggest privatisation measures in Italy and should go some way towards reducing flva's losses while reassuring the European Commission that the group's rationalisation strategy is on track. Earlier this year, Sir Leon Brittan, the EC commissioner in charge of competition, questioned two recent Ilva capital increases might open a formal procedure

against the company.
Ilva is selling 60 per cent of the companies which control its big Piombino and Turin works to the private sector Lucchini group. Under the transaction, which is still sub-ject to precise valuations, fiva could receive around L150bn from Lucchini, which will take on L280bn in debts from Piombino and L24bn from the Turin plant. Ilva's current group debt stands at L6,300bn.

Bringing in private-sector participation to Piombino, Ilva's second-biggest works, has been a crucial part of its strategy to staunch losses, expected to reach around L1,000bn in 1992.

The new joint venture, which is still subject to approval from the commission, will have sales of around L1.200bn and have annual output of almost 2.5m tonnes. The transaction had been under discussion for many months, but failed to progress the European steel industry. Under an original proposal,

three private-sector steel

groups would have come in as ihareholders. The venture with Lucchini, will have around 20 per cent of the Italian market, and will be Europe's fifth-biggest steel maker of iong laminates. Lucchini, which may launch a capital increase to help finance the deal, currently has sales of around L1,000bn.

#### withdrawal from men's wear.

By Jane Fuller in London The £32.2m (\$54.7m)

SEARS, the UK retail and mail order group, will close 350 shops and shed up to 1,800 jobs over three years in the latest reorganisation of the British Shoe Corporation, which includes high street names such as Dolcis, Saxone and Freeman Hardy Willis.

The group also cut its interim dividend from 1.525p to 1p. Mr Geoffrey Maitland Smith, chairman, said that the final would also be reduced to give a total of 3.5p, down from

The cut came as no surprise to the market, and the share price gained 8p to close at 80p. It has risen 25 per cent since

exceptional cost of rationalising British Shoe pushed Sears into a pre-tax loss of £8.8m in the six months to July 31, and increased the loss per share from 0.3p to 0.5p. Turnover slipped to £902m from £923.7m, reflecting a £55.2m fall from discontinued activities.

Pre-tax losses for the same period last year were £2.4m after £25.2m of rationalisation costs for men's wear. Mr Liam Strong, chief executive since February, said the stream of exceptional charges was over. The announcement of job-cutting at British Shoe follows a 2,000 reduction in the

workforce over the past year.

After converting some of the closed shops and opening others out-of-town, the net effect would be to reduce the number of shops from 1,200 to to 1,000. The number of concessions (shops within shops) stays at about 570. Freeman Hardy Willis and

Curtess would be most affected. "They sell shoes cheaply to all the family," said Mr Strong, who is considering whether any of the group's six shoe brands should be

The footwear division recovered from a trading loss of £3.3m to a profit of £1.9m on sales of £249.4m, down £7.7m.

An earlier round of Dolcis improved on last year's reorganisation was launched in good figures and Saxone returned to like-for-like sales - Alluciu

Verdict Research, which monitors the retail sector, said British Shoe had 18.3 per cent of the UK's £3.73bn shoe market last year. The market had been flat in real terms

since 1986.

Other divisions contributed to Sears' £27.4m (£23m) trading profit as follows: speciality retailing - children's wear, women's wear and leisurewear - up to £6.5m; Selfridges department store, up to £5.5m; home shopping, down to £11.9m; property up to £8.5m; others, mainly discontinued,

#### Chairman of Skanska resigns

By Robert Taylor

THE chairman and chief executive of Skanska, Scandinavia's largest construction and property group, resigned yes-terday, accepting his share of responsibility for the estimated SKr1.2bn (\$222.2m) losses suffered by the company as a result of alleged unauthorised foreign exchange speculation and the high Swedish interest

Mr Lars-Ove Hakansson, head of Skanska since 1986, said he was leaving immediately. He will be replaced as chairman by Mr Percy Barnevik, chief executive of Asea Brown-Boveri, the Swedish-Swiss engineering conglomerate, who has been on Skanska's board for the past six

Percy Barnevik: Skanska board member for six years years and became vice-chair-Mr Sven-Eric Hersvall will

Philips plans Japanese expansion

The sudden change at the top of the company followed an

emergency board meeting yes-terday, "Skanska is a well-run company strong on the contracting business side with a number of industrial companies and a good stock of real estate companies", said Mr Barnevik. It was important to concentrate harder on key operations and restore confidence in the company, he said.

Mr Hakansson's abrupt departure from Skanska follows the dismissal of the head of the group's financial subsidlary earlier in the month for alleged currency speculation during the summer that cost Skanska an estimated SKrlbn.

Benetton rises 16.5% to L92.8bn remain as Skanska's president but the post of chief executive will be subsumed in the organi-

> BENETTON, the Italian clothing group, raised net profits by 16.5 per cent to L92.8bn (\$74.47m) in the first half of this year, on a 7 per cent rise in sales to L1,233bn.

The improvement came across virtually every line of the group's business, with strong growth from its up-market Sisley brand, which increased sales by 29 per

Turnover by Benetton's socks and accessories division also jumped, with a 90 per cent increase stemming largely from increased sales of sports and women's shoes, as well as accessories. Geographically, Germany and Spain had performed particularly well, while sales had risen due to expansion into new areas, notably among developing countries

The company confirmed the return of Mr Aldo Palmeri, its former managing director for eight years, to his previous position. Mr Palmeri, a one-time Bank of Italy official, left Benetton in February 1990 to become Citicorp's chief country corporate officer for Italy. Benetton's gross industrial margin rose by 9.3 per cent to L460bp, while net financial charges dropped by L1.5bn to

Li6.8bn. Net debt fell by L75bn

#### ing cuts in production costs, to even because steelmaking LFr6bn in the whole of 1991. owing to the growing crisis in

#### **O&Y** to present outline of plan for restructuring

By Bernard Simon in Toronto OLYMPIA & York, the alling property developer, will today present the outline of a restructuring plan to creditors of its extensive operations in

A feature of today's meeting will be the absence of any members of the Reichmann family, who own O&Y, or of the team handling restructuring negotiations for the Canadian parent company and the Canary Wharf project in Lon-

The US subsidiaries, which have so far managed to avoid the bankruptcy protection which was granted last May to O&Y's operations in Canada and the UK, have sought to distance themselves from the rest of the company.

O&Y is expected to ask the creditors to agree to postpone principal payments on its US buildings for the next five years and to pay interest only on those buildings which generate enough rental income to service their debts.

This, in essence, is what the company has been doing since its problems surfaced earlier this year.

Today's briefing, which will be held in one of O&Y's buildings in downtown Manhattan, will be chaired by Mr John Zuccotti, a former deputy mayor of New York who is

chief executive of the US arm. The meeting is being described as a preliminary one which will be followed by discussions with individual groups of lenders. Each of O&Y's two dozen or so buildings has its own group of bank lenders and/or bondholders. However, negotiations are complicated by the fact that, in some cases, loans to one build-ing are backed by other properties. In addition, there are a number of unsecured lenders.

O&Y has equity partners in several of its US properties, including Mr Li Kashing, the Hong Kong tycoon and JMB. the Chicago-based property

The US restructuring is taking place in tandem with a strategy of selling properties which are either unable to service their debt or require substantial investment for renova-

O&Y has signed deals to sell two buildings, one at 320 Park Avenue, which is empty, and the other at 55 Water Street, which needs extensive refurbishing.

The company has all but given up its participation in the planned Yerba Buena project in San Francisco.

Further asset sales are understood to be in the pipe line, but the company declined to disclose what else it has put on the block.

#### Chairman pumps life into ailing tyre group Rubbermaid, the Ohio toys-to

John Griffiths talks with Stanley Gault who has wasted little time in changing direction at Goodyear

ESS than two years ago, Goodyear Tire and Rubber's employees were contemplating their company's rapidly-deflating fortunes with

A 1987 net profit of \$770.9m had plunged by 1990 to a loss of \$40m. Savage job cuts were under way among the world-wide workforce of more than 100,000 people,and Goodyear was being demoted from first place to third in the world hierarchy of tyre manufacturers.

Today, Goodyear is rolling away from recession almost as rapidly as the company skidded into it. It achieved record first-half

sales of \$5.8bn and a leap in first-half net earnings to a wellabove-forecast \$176m. This week, the company indicated there would be further thirdquarter gains in both sales and profits.

Goodyear is being helped by a recovery slowly gaining pace in world tyre markets. But long-serving executives at the headquarters in Akron, Ohio, say that no less significant is the shake-up instituted by Mr Stanley Gault, chairman, since taking office in June last year, It is a shake-up not without tensions: tomorrow, Mr Oren Shaffer, long-serving chief financial officer, is to resign to pursue other interests.

NORTHERN TELECOM, the

Canadian telecommunications

group, is to take a 7.5 per cent

stake in MMB, the French

holding company which

controls Matra, the telecommu-

nications and transport group, and Hachette, the

advertising and publishing

The move, to come into force

at the end of this year, is a consequence of an offer pub-

lished vesterday to buy out the

outstanding MMB shareholders

Unlike most of his predect sors Mr Gault, 66, is no dyedin the treads tyre man. He spent 10 years as chair-man and chief executive of

furniture group, before joining Goodvear. However, the bulk of his 31-year career had been spent with General Electric. where he became senior vice-president in charge of GE's industrial products and components sectors.

Mr Gault has wasted little time in altering Goodvear's course, while not overtly criticising his predecessors at

Nothing could better symbolise his strongly marketing-ori-ented approach than the announcement in March that Goodyear-branded tyres would be sold through North America's biggest retailing chain, Sears, Roebuck However, Mr Gault's edict

was heresy to the managers of Goodyear-owned replacement tyre depots and independent dealers through which the company's tyres had been sold exclusively in North America.

He has no problems defend-ing the decision. Goodyear's share of the large North American replacement car tyre market had fallen from 15 per cent to 12 per cent in the previous three years. The dedicated outlets had a reputation for being expensive and the market was changing, with brand loyalties

fading. Sears, Roebuck, moreover, is North America's single largest tyre retailer, selling nearly 10m units a year. "In other words, we haven't had tyres for sale in the places where people want

supplies of own-label tyres pro-

Goodyear has added another 3,300 outlets selling Goodyear or Goodyear produced tyres in North America - a 35 per cent

Goodyear's profits are being

duced by Goodyear's more downmarket subsidiary, Kelly -Springfield. For these, districluded with Wal-Mart another mass retailer, and with Big O. an independent tyre retailing

helped by the tyre industry's determined effort this year to break the long, recession-in-

announcing price increases of up to 7 per cent.
No one expects it all to stick. However, Mr Philip Wylie, Barclavs de Zoete Wedd analyst and author of a recent Economist intelligence Unit report on the world tyre industry, should be retained, with a further lift coming from a long-de-

Mr Gault has brought to the market some new products perceived as providing Goodyear with a technological edge. Most notable is the Aquatred, a tyre with a large central groove, which gives the impression of two tyres mounted on one wheel. It is claimed to have superior grip on wet roads.

layed upturn in US vehicle pro-

Much of Mr Gault's first year has been devoted to morale-improving missions to plants as the number of employees has shrunk to 97,000 and Goodyear has continued to seek productivity improvements.

In 1991, 7,000 jobs were lost worldwide. The company will continue to reduce manning levels wherever possible. Mr Gault insists, but the harshest cuts - 15,000 over the past four years - are said to be

The aim is to improve open ating margins; reduce further the debt burden incurred in fighting off Sir James Goldsmith's takeover bid in the late 1980s and maintain tight control of capital spending. Excluding restructuring

margin improved to 9.2 per cent in the first half of this year, from 6.2 per cent in the

same period of 1991. Mr Gault hopes the debt burden will fall to below \$2hn by the end of this year, down from \$3.7bn in last year's first quarter - and two years ahead of schedule.

He acknowledges there is little prospect of selling off the multi-billion dollar All American Pipeline, Goodyear's most ill-advised diversification project of the 1980s. However, its operating losses in the first half of this year were cut to \$13.5m, about one-third of yearago levels and Mr Gault holds out the prospect of it soon making a profit.

Goodyear's European operations have been slimmed down, and in this region at least "there is not a lot of restructuring left for us to do". Indeed. Goodyear plans a \$12.5m investment next year at its Luxembourg truck tyre

Expansion is also planned for Thailand, the Philippines, Taiwan, Indonesia and other Pacific Rim countries.

Mr Gault is philosophical about Goodyear's demotion as the world's biggest tyremaker by both Michelin of France and Japan's Bridgestone. Both, he suggests, are saddled with bigger debt burdens than they bargained for with their royal-Goodrich and Firestone.

#### Northrop fears \$232m loss on Stealth bombers

By Karen Zagor

NORTHROP, the US defence contractor which is heavily dependent on the B-2 Stealth bomber programme, may lose about \$222m in profits on its first 10 bombers because of manufacturing problems,

according to US press reports. The company, which is trying to increase its presence as a supplier of parts to commercial jets, is taking a third-quarter charge of \$152m

1717年 1717

on a missile programme. Northrop's profit rate on the 10 aircraft is expected to drop to 9.5 per cent from a negotiated rate of 13.8 per cent. As of June, the programme had run about \$555m over the contract

target of \$7.4bn. The higher costs were attributed to lower aircraft orders, problems with sub-contractor performance, and a 42-day strike. The company said it had taken these issues into account.

#### Safeway tumbles 44.6% to \$20m drop about 50 per cent in the

By Karen Zagor in New York

TOUGH competition in the US food retail industry and the pressures of a lacklustre economy were underscored in the underlying third-quarter earnings of Safeway, the Californiabased supermarket group, which tumbled 44.6 per cent to

\$20m, or 17 cents a share. Net income for the same period of 1991 was distorted by extraordinary items, which brought net income to \$40.3m, or 38 cents a share. Strippingout one-time items, Safeway earned \$36.1m in the quarter. The company had warned

investors to expect earnings to

latest three months, and the shares edged slightly above their 52-week low yesterday morning, adding \$% to \$10%. Sales for the 1992 third quar-

ter fell 2.3 per cent to \$3.5bn,

while same-store sales eased 3.5 per cent. The company, which was subject to a \$4.2bn leveraged buy-out in 1986, reduced its interest expense in the latest quarter to \$83.7m from \$82.2m a year earlier. For the first nine months.

Safeway earned \$48.4m, or 41 cents a share, against \$102.6m, or 91 cents a year earlier. Revenues stood at \$10.3bn, com Times Mirror, the US media group, expects third-quarter operating results in its Newspaper Publishing Group to be considerably lower than those of a year ago, Reuter reports from Los Angeles.

The company gave no figures, but said improving advertising volume at its eastern newspapers and lower newsprint costs were not sufficient to offset the sharp declines in advertising revenue at the Los Angeles Times. The company said newspaper advertising revenues for the four weeks ended August 30 decreased 5.6 per cent, to \$105.7m · from \$111.9m in August 1991.

This advertisement is issued in accordance with the requirements of The International Stock Exchange of the United Kingdom and the Republic of Ireland Limited ("the London Stock Exchange") and appears as a matter of record only. It Application has been made for the Shares in The China Investment & Development Fund Limited (the "Company") to

be issued pursuant to the Placing to be admitted to the Official List by the London Stock Exchange. Dealings in the Shares are expected to commence on 6th October 1992.

#### **Daihatsu Motor** forecasts Y5bn pre-tax deficit

3y Robert Thomson in Tokyo

DAIHATSU Motor, the Japanese commercial vehicle und carmaker, yesterday foreast a pre-tax loss of Y5bn \$41.8m) for the year to the end of March, It would be the first loss reported by the Toyota Motor-affiliate since it was listed in 1949.

The company's plight results from its confidence that the unusually strong car sales growth of the late 1980s would continue into the 1990s. Like other Japanese carmakers, It bullt a production facility that has been left under-utilised by a downturn in the market.

Daihatsu, and the rest of the Japanese car industry, will be under extra pressure because of the yen's recent sharp appreciation. About 23 per cent of Daihatsu's sales come from exports, and the stronger yen is likely to trim export margins

and growth. Having specialised in minivehicles, cars with engine displacement of a maximum 660cc, Daihatsu has been hurt by a 6.2 per cent first-quarter fall in these models, compared with the same period last year, and a 12.5 per cent slide in the

second quarter. Last year, the carmaker reported pre-tax profits of Y4.6bn, down from Y13bn, Yesterday, it said the first-half and full-year loss would be Y5bn. It revised downwards its full-year sales forecast from Y830bn to

have the backing of Toyota, which has commissioned it to produce compact cars, but Daihatsu still faces a continuing fall in its main market. In August, sales of mini-cars were down 12.3 per cent on the same

Daihatsu has already reduced executive salaries and transferred administrative staff to the sales force. It announced yesterday that the two-shift operation at its Ikeda plant will be reduced to one shift until the market improves. Japanese carmakers were

month last year.

forced by the turmoil in financial markets to tap cash reserves to fund the construction of new facilities, and Daihatsu's reserves fell by almost two-thirds last year, reducing its interest income this year. Makers of mini-cars say the

market has been bruised by tougher parking legislation introduced a year ago to reduce congestion in Tokyo and Osaka. Until then, minicars were exempt from a requirement that a new car purchaser have an off-street

The mini-car market was encouraged in 1990 by an expansion of the allowable engine size from 550cc to 660cc but even then Daihatsu missed a gear change, as the company failed to pick a shift in demand towards luxury mini-cars. Having prepared to cater to that market, the company found it

#### Fuji Bank tells US unit to cut non-performing loans

By Robert Thomson

FUJI Bank, the Japanese commercial bank, has told Heller International, its US financial subsidiary, to reduce sharply its non-performing loans over the next three

The continuing difficulties at Heller, purchased nine years ago, highlight the problems plan will put the unit firmly facing Japanese banks which

bought US financial institutions in the mid-1980s. Several of those US units are now burdened by non-performing loans made during the late 1980s, particularly to the property

#### Gota Bank parent seeks receiver

By Robert Taylor

GOTA AB, the Swedish holding company which owns Gota Bank, the country's fourth largest commercial bank, declared yesterday that it was bankrupt with debts totalling SKr5bn. The group's board said that the whole of its share capital had been exhausted and it was applying to the courts for a receiver. It suspended all payments to creditors on September 16.

However, the board's deci-alon will not affect Gota Bank which will continue to operate normally after the Swedish government guaranteed on September 9 to meet the bank's obligations. Mr Bo Lundgren, the minister responsible for financial Insti-tutions, emphasised that the bank's customers would not be injured by the collapse of Gota AB. "The government's earlier commitments to meet Gota Bank's obligations remain in

Mr Per Lundberg, Gota Bank's chief executive, said negotiations were going on with the Finance Ministry to reach an agreement on the

bank's future. But the bankruptcy of the holding company will bring substantial losses of SKr1.5bn (\$275m) to its chief shareholder, Trygg-Hansa SPP, the insurance conglomerate, while many large Swedish compa nies and other banks risk los-ing about SKr1.5bn in loans and other financial support.

The group's fate was sealed over the past few days when it became clear that the Swedish state would not extend its guarantee to cover the holding

Yesterday, Gots Bank announced an operating deficit of SKr2.5bn for the first eight months of the year compared with SKr966m loss for the same period of last year mainly due to a substantial growth of about SKröbn in its credit losses. The bank expects to make an operating loss in 1992 of between SKr3bn and SKr4bn with credit losses totalling SKr8bn for the year.

#### Venture capital becomes a scarce resource

Emiko Terazono examines why Japan's investors are turning ever more conservative

ENTURE capital in Japan, always a rare resource, is becoming even more scarce following the downturn in the country's

The slump in the equity market and gloom over the economy has made investors more conservative. Many financial institutions · which were keen newcomers to the Japanese venture capital market in the years of loose credit in the late 1980s - have retreated to their core businesses Problems at Ascii, the com-

outer and software company led by Mr Kazuhiko Nishi, typify the troubles faced by small companies in raising venture capital. The company's expan-sion was funded in 1990 by bonds convertible into equities However, the sharp fall in the Tokyo market has left the bonds - which expire next March - unconverted, and the company does not have the funds to repay investors. Faced with mounting debts

help, and managed to persuade its six main creditors to come "Small companies are under great pressure, especially with larger companies cutting back on capital expenditure," says

Ascii turned to its banks for

Mr Alan Acosta, analyst at Baring Securities. The amount loaned by banks to small companies is likely to fall year-on-year for the first time in 15 years. New public offerings have virtually come to a halt since the over-the counter (OTC) market plunged along with the first section of the Tokyo stock market.

Mr Sadayoshi Hayashi, a director of Jafco, Japan's largest venture capital company and an affiliate of Nomura Securities, admits that times are hard. "The capital markets are in bad shape, but in the long run, the trend towards increasing listings for smaller companies has not changed,"

The downturn in the economy is working favourably for Jafco, since it makes investment decisions easier. "When things are good, everybody makes profits, but in times like these, we can pick out the good ones," Mr Hayashi says.

Venture capital in Japan has traditionally been different from that in the US and Europe, where capital is invested in the start-up of high-risk companies. In Japan, under a culture which values stable growth and the credibility of an organisation rather than that of an Individual entrepreneur, there have been few small start-up ventures.

"Japan's venturo capital market is not socially developed, and there is no real grass roots growth," says Mr Gary Chan, an analyst at James

mitigated against Japanese Capel, the broking firm. Venture capital companies in venture capital. Japan focus on finding growing but mature companies with

potential to be listed publicly, rather than taking large equity positions in companies. This is because they look for future profits through flotations and underwriting.

n the past, smaller compa-nies have relied on govern-ment financing, and loans from small banks and loan cooperatives. The focus on stable growth rather than high profits, and the unwillingness of investors to place funds into start-up companies, has also

Another characteristic among Japanese companies, resulting from the lack of risktaking by venture capitalists, is low profit growth. According to Nomura Research Institute (NRI), the average annual growth rate of revenues at the top 20 US companies, during the first four years of listing on Nasdaq, was 132.5 per cent. However, the figure for the top 20 Japanese companies listed on the over-the-counter market was 32.9 per cent.

Mr Shinichi Shibayama at NRI points out that the closed business structure in Japan,

New listings on the Japanese OTC market where leading companies and regarded as equals, and the lack of intake of qualified staff at small companies hamper

sald: We are not deliberately avoiding new companies when we invest, it's just that there is no market for start-up companies which nobody has heard of."

Small companies face several years before they establish their credibility and become ready for public listing. On the OTC market, companies have been in business for an average 29 years before their initial offering. In the US, it is 4.7 years on Nasdaq.

In addition, fast growth areas such as high technology and biotechnology, usually targeted by venture capital companies in the US, are taken on by larger companies in Japan, For example, leading pharmaceuticals and foods corporations are active in research and development in biotechnology.

Recession or no recession the venture capital business in Japan still faces social and cultural barriers. "One major hurdle is the reluctance among investors to provide credit on the back of innovation and new technology," says Mr Tak-ehiro Tsuda, analyst at ichiyoshi Securities.

#### **Advance at Reliance Industries** By Shiraz Sidhya

In New Delhi

RELIANCE Industries, India's second-largest company and the first to make an international equity offering, yester-day announced an 11.2 per cent rise in turnover to a record Rs23.4bn (\$8.3bn) for the year to March, up from Rs21.04bn a year earlier.

The textile and petrochemical company's operating profits advanced 18.7 per cent to Rs3.55bn from Rs2.99bn a year earlier, and net profits rose 30 per cent to Rs1.63bn from Reliance claimed it continued to be among India's six

exporters, with exports of Rs810m in total.

Reliance this summer became the first Indian company to tap international equity capital markets with a \$100m issue of global deposi-tory receipts (GDRs) through Morgan Stanley, the US investment bank. The GDRs are traded on over-the-counter markets in Hong Kong, London and New York.

The issue caused controversy when the share price fell sharply immediately after the offering, caused by Bombay's stock market scandal.

Reliance, one of India's most aggressive companies, has set an ambitious target of reaching largest manufacturerturnover of Rs100bn in 1996 -

a five-fold increase on last year's result.

Mr Dhirubhai Ambani, the group's 60-year-old founder, has struck deals with international partners including C. Itoh, the Japanese trading group, to set up a 6m tonne oil refinery in western India at an estimated cost of Rs30bn. Reliance Industries' net asset

value at the year-end was Rs19.43bn and its paid-up capi-In March, Reliance was

expanded by the merger with Reliance Petrochemicals, its associate. The move was intended to give Reliance more leverage to raise funds from the capital markets ahead of its international equity offer.

#### Bic rises 11% despite loss at fashion subsidiary subject of a takeover, by

By William Dawkins in Paris

ENCOURAGING first-half results have been reported by three French companies, Bic, the producer of disposable pens and razors; Au Printemps, the department store; and Poliet, the building materials group. Bic produced an 11 per cent increase in not profits to FFr24im (\$47.25m) in the first six months of the year, due chiefly to its French, US and Brazilian operations.

loss from Guy Laroche, Bic's fashion arm, most of which is due to restructuring and writedowns on assets.

· Au Printemps, recently the

This comes after a FFr49m

Pinault, the distribution group, reported more than doubled first-half net profits of FFr206m, as against FFr87m in

the same period of last year.

These figures do not include the FFri.87bn gross profit which Au Printomps made last year from soiling Euromarche, the hypermarkets chain. Group sales rose 33.5 per cent from FFr14.14bn to FFr18.86bn.

· Pollet; a subsidiary of the Peribas banking and industrial holdings group, saw net profits rise by 9.8 per cent to FFr290m in the first half. Sales were almost stagnant at FFr9.99bn, as against FFr9.02bn in the first six months of 1991.

#### Referendum uncertainty puts pressure on Canadian bond prices

By Tracy Corrigen and Sara Webb in London and Patrick Harvecton in New York

CANADIAN government bond prices dropped 1% points yes-terday, as the Canadian dollar came under fire in the foreign exchange markets. The cur-rency fell below key resistence levels against the US dollar, following pressure during re-cent trading sessions, and suf-fered against the yen, prompting some Japanese investors to sell Canadian bonds.

Fears about the outcome of

GOVERNMENT

#### BONDS

the October 26 referendum on a package of constitutional measures have contributed to volatile conditions in Canada's financial markets. Yesterday, opposition leaders criticised Prime Minister Brian Mulronev for causing panic on financial markets with warnings that Canada could break apart if the No side wins the national

Support for the package has slipped since the deal was struck a month ago, according to recent polls. The bond mar ket was further undermined by concern about the reception of yesterday's C\$1.5bn government bond auction.

■GERMAN bond prices ended slightly higher in thin trade yesterday. Activity was con-centrated in the German money market where the government both drained and added liquidity in different areas of the market, prompting continued confusion over the Bundesbank's intentions over interest rates at Friday's council meeting.

However, the strength of the D-Mark, combined with growing fears over the German economy, may tip the scales in favour of a rate cut, according to some analysts. Speculation that the fluctuation band between the D-Mark and the French franc will be tightened is encouraging hopes of an interest rate cut, which would help support the franc.
The German bund futures contract on Liffe ended at 90.50, up from 90.34 at Mon-

FRENCH government bonds ended % point lower, as hopes that France would join a fasttrack to monetary union faded. High money market rates continued to hamper activity in the bond market, where it is now very expensive to finance trading positions. The market has also become rather nervous about the French government's 1993 budget plans and the monthly auction of bonds

■GILT prices recouped earlier losses to end the day virtually unchanged, as the market continued to trade nervously within a fairly narrow range. Comments by Mr Robin Leigh-Pemberton, governor of the Bank of England, suggesting that sterling's weakness would not leave room for further substantial rate cuts, helped The market "is still reorgan-

ising itself" in the wake of ster-

ling's suspension from the

Traders said some of the selling at the end of the session

may have been hedging ahead of today's expected Y800bn

government may issue deficit-financing bonds pulled both auction of 10-year bonds. the cash and futures market ■US Treasury prices eased slightly across the maturity range yesterday, despite fur-ther bad news on the economy. In late trading, the benchmark 30-year government bond was down & at 981, to yield 7.361 per cent. The two-year note was also slightly weaker,

down & at 100% to carry a yield of 3.804 per cent. The day's figures continued to paint a bearish picture of economic conditions. The Conference Board's survey of con-sumer confidence fell from 59.0 in August to 56.4 in September. the third straight monthly fall and a worse figure than analysts expected, while the leading index of economic indicators fell 0.2 per cent in August. Although both sets of data

increased the chances that the Federal Reserve may ease monetary policy again, possibly after Friday's employment about pricing an interest rate cut into the market.

#### to be tested By Richard Waters A NEW spate of Latin American borrowings in the international bond markets is

under way, further testing the interest of foreign investors for Latin American paper. Yesterday saw the pricing of the latest issue from the Rep-ublic of Argentina, the third tional bond market. At \$250m.

International

interest in

Latin paper

longer than it has previously attempted - the issue marks a new test of the country's acceptability internationally. The bonds were priced yes-terday to yield 300 basis points over US Treasuries - consider ably higher than the spread of little more than 200 basis points that has been talked about in recent weeks. Discussions with potential investors proved that Argentina, still

with a maturity of five years -

rated only a B1 credit by Moody's after a July up-grade, has not yet achieved such levels of financial acceptability. Compared with the yield spread of some 400 basis points on another five-year issue from Telecom Argentina, the bonds were considered to be fairly priced, though an issue of this size is expected to take some

time to sell. Meanwhile, another new Latin credit is about to be presented to international investors - the Corporacion Andino de Fomento (CAF), the development fund for the Andean Pact countries (Venezuela,

Ecuador, Peru and Colombia).

The \$75m issue, led by Chemical Bank, is not expected to be launched for some weeks, after a road-show to potential investors. CAF is regarded as a good credit, since the Andean Pact countries are likely to regard their debts to the fund as ranking before other international commitments, said Mr Paul Luke, an economist with Mor-

gan Grenfell in London. In a further new issue from the region, Venezuela is preparing to borrow \$115m. Unlike other borrowers, though, it is launching the bonds in Colombia in a move aimed at attracting some of the excess dollars in the country.

#### Turmoil causes Swedish government to postpone Procordia privatisation

By Sara Webb

RECENT turmoil in the European financial markets

INTERNATIONAL EQUITY ISSUES

taken its toll

equity issues business. while the markets are The Swedish government has in such an unsettled state. decided to postpone the privatisation of Procordia, the Swedish food and pharmaceutical group, because of the unfavourable stock market conditions, and investment bankers claim that fewer companies are lining up to launch international equity offerings

The privatisation of Procordia was expected to take place this autumn, but has now been scheduled for the spring - provided stock market conditions prove more conducive.

The Swedish stock market

has plummeted recently on

worries about possible devaluation of the krona, concern over the troubled financial sector, and against a backdrop of very high interest rates.

The government agreed an economic package with the main opposition parties on September 20 aimed at boosting confidence in the Swedish economy and, at the same

time, said it would postpone selling its shares in Procordia. Bankers point out that, given the current state of the Swedish stock market, it could prove hard to drum up much retail interest in the offering. About half of the shares will be aimed at international investors, while the rest will be

aimed at domestic buyers.

Terretari Circle ATLAS (Terre Source)

The long gilt futures con-tract on Liffe ended at 97.17,

capitalisation has fallen to SKr35.3bn (\$6.4bn) from SKr45.7bn at the end of May. The Swedish state owns 40.4 per cent of Procordia's voting shares and 34.2 per cent of the total share capital. The other main shareholder in the com-

and truck manufacturer.

Repsol, the Spanish state owned oil, gas and chemicals group, has also delayed its planned international equity offering until next year. However, the decision to postpone the issue was not related to market conditions but hinged on the fact that Repsol must pany is Volvo, the Swedish car tain legal barriers.

#### Denmark produces tightly-priced \$500m issue to top up its foreign reserves

DENMARK turned to the Eurobond market yesterday to help top up its foreign exchange reserves, producing an extremely tightly-priced \$500m issue that brought sharp intakes of breath from some underwriters.

INTERNATIONAL BONDS

The lead-managers, though, reported that most of the paper was placed during the day, that borrowing costs in the international bond market would rise sharply after the events of recent days. The five-year issue had attracted bids at a yield of over 45 basis points above US Treasuries, but Daiwa won the mandate at a bid below 30. At launch, the bid spread was 28.2 basts points over Trea-

Even the lead-managers said this was some four or five basis points below the market clearing level, though other banks said the yield should higher. Demand was said to be strong from the Far East, with

more than half the bonds sold being placed there overnight. Daiwa said it and the two co-leads - Westdeutsche Landesbank and Warburg - had placed some 80 per cent of the \$420m of bonds they had underwritten between them. That was a higher proportion than most others had thought possible given tight pricing.
After breaking syndicate,
Daiwa stood behind the issue,
picking up some bonds as the

basis points. That appeared comfortable with the break-even for the syndicate at around 34 basis points, however, and the spread tightened later to under 30. The deal drew a mixture of

grudging support and dishelief from other bankers. Even for a borrower renowned for squees ing every last basis point out of the market, the pricing was seen as very tight. Other bankers said only once the price had found its final level in the secondary market could the

### Squeeze on margins hits T&S

**By Andrew Bolger** 

T&S STORE., has attributed a fall in pre-tax profits to a squeeze on margins at Super-cigs, its tobacco retailing subsidiary, and Dillons, its chain of newsagents.

In the first half of 1992 pretax profits fell nearly 8 per cent, from £7.08m to £6.54m, in spite of a 9 per cent increase in turnover to £166.1m.

Cigarette volumes were affected by another increase in duty but sales of newspapers and confectionery held up well. Neighbourhood and convenience store retailing fared bet-ter than Supercigs, which continued to suffer from fewer customers on the high streets. Mr Kevin Threlfall, chair-

man and chief executive, said: We have to do something about reduced consumer demand, rather than blaming

The growing chain of Dillons convenience stores, currently at 94, lifted turnover 33 per cent to £32.1m and trading profits 41 per cent to £1.99m. Although turnover from the 212 Supercies outlets rose 5 per cent to £83.92m, trading profit dropped 9 per cent to £2.04m. The group maintained its 3 per cent share of the national ciga-rette market, which had fallen

Kevin Threlfall: doing something about reduced demand

by about 8 per cent overall. The Dillons chain of 283 newsagents lifted turnover by 4.5 per cent to £50.1m but saw trading profits dip 2.5 per cent

Although the group's overall trading profits rose 5 per cent to £6.57m, the pre-tax figure was reduced by an interest payment of £50,000, which compared with interest receivable

of £200,000 last time. T&S said the air of uncertainty in the property market had restricted the sale and purchase of businesses, and profits from disposals fell from £623,000 to £222,000.

A reduction in shop stock coupled with tight warehouse controls reversed the year-end cash position from an overdraft of £15m to cash of £5m. 7.69p (7.57p), while the interim dividend is lifted to 2.4p (2.25p).

**COMMENT** 

Mr Threifail has stripped out more than film of annualised costsby slimming the management structure, closing four regional offices and making more use of information tech nology, although the benefit will be felt more next year. Forecast pre-tax profits of £13m put the shares, down 5p to 181p yesterday, on a prospective multiple of about 12. That seems undemanding, given the quality of the management and success of its news-based convenience store formula. The group perhaps suffers from being associated so strongly with tobacco, but the contribution from cigarettes is set to diminish. The share price may also be overhung by concerns about another big acquisition, following its £53.9m purchase of the Dillons and Preedy chains from Next, which required a rights issue in 1989. T&S might well be interested in a convenience store chain, with a warehouse and distribu-tion network in the south, but said the rights issue required for such a deal would probably be closer to 20 per cent of the

Charles W Hall acquired for a combined £26m in June 1991 and January 1992 -

sock producers. Capital expenditure in the half was £8m with 77 per cent of that going on Jaca-tronic and Textronic machines. One Textronic machine produces about £200,000 of turnover: Sherwood currently has eight and will have 12 next year when capital expenditure for the 12 months will fall to

## Profits warning from GPA

By Daniel Green

TRADING PROFITS at GPA, the world's largest aircraft leasing company, will show "a significant reduction" in the second quarter compared with the first, warned Mr Tony Ryan, chairman, at yesterday's annual meeting.

The company has been hit by costs arising from the failure of its \$800m (£468m) share offering in May and a squeeze on lease rental margins.

One result is that GPA is likely to make provisions and charges in the accounts for the year ending in March 1993. Mr Ryan said that those "may be material in the con-text of annual earnings."

He confirmed that the company was planning a follow-up to its successful Aircraft Lease Portfolio Securitisation (ALPS) aircraft securitisation issue

earlier this year.
Alps 92-2 will involve the sale of 18 aircraft for \$752m and should go ahead next

month. "We have received preliminary indications from the major debt rating agencies that they will give an AA rating to the senior debt in this fund," said Mr Ryan.

Progress was also being made over the raising of more equity capital. "This is likely to take the form of an issue of convertible preference shares," he said. "Discussions (with the company's main shareholders] have been constructive."

He outlined the agreement in principle with Boeing, the air-craft maker, to defer delivery of aircraft worth \$5bn and ided that other deals with suppliers "will make \$650m of additional liquidity available to GPA over the next 18 months." Nevertheless, the forces

behind the flotation failure and the postponement of orders "GPA continues to be

affected by uncertainty in the world economic scene, by a temporary oversupply of aircraft, the consequences of the

withdrawal of our flotation and by lease rental margins and aircraft sales levels that have been adversely affected by recessional influences.

The oversupply of aircraft and low sales levels are impor-tant to GPA because much of the company's profits arise from the sale of second-hand aircraft after they have been

leased for a few years. Mr Ryan painted an optimis tic picture for the longer term. Some 193 aircraft had been leased so far this year compared with 111 in the same. period last year. However, "the benefits of

much of the business we are writing today will not be reflected in our financial statements until the aircraft concerned are delivered to customers and start earning revenue. GPA has leased two aircraft to Air Ukraine International, a newly-formed subsidiary of the national airline Air Ukraine. The 150-seat Boeing 737-400s

go into service in November.

#### **Boosey & Hawkes out of tune** with City as shares dive 95p

By Peggy Hollinger

BOOSEY & Hawkes, one of Britain's oldest instrument makers, yesterday announced a 10 per cent increase in interim pre-tax profits to £1.44m, but warned that the zlobal recession was beginning to dampen growth.

The City marked the shares down by 95p to 865p on the news, in a generally steady market

Mr Richard Holland, chief xecutive, said he was baffled by the fall in the share price. The result we produced is a very good one in the current climate," he said. "All we are saying is we must accept a slower rate of growth compared with the 20 per cent of

previous years."

The dividend was raised by 9

advanced almost 13 per cent to 18.6p (16.5p).
Mr Holland said the group

expected to report progress in the second half similar to that of the first six months. However, profits would be depressed by about £200,000 as a result of the recent sterling crisis. He said the devaluation of sterling would eventually benefit the company as it sought to increase exports.

Boosey reported an 8 per cent increase in sales to £26.5m for the six months to June 30. Growth was slower in the music publishing division partly due to the depth of the US recession. However, Mr Holland said the rate of growth represented a "more normal" level, following last year's

The instrument making divi-sion felt the effects of eco-

sharo improvement.

nomic slowdown in Japan, which accounts for about 20 per cent of sales. Profits in this division had advanced, although not as rapidly as last year. Mr Holland said there was a risk of a further setback in Japan, although he remained optimistic about the longer-term outlook.

A redundancy programme in the UK and Germany resulted in the loss of about 40 jobs. There would be no significant redundancy costs, Mr Holland said, although the benefits would feed through next year.

Interest charges rose about 16 per cent to 21m, due to the element of foreign currency debt. Borrowings as a percentage of shareholders' funds was at a seasonal high of 88 per cent. Gearing at the year end was expected to be lower than

#### Higher interest charges push down Prestwick

By Paul Taylor

PRESTWICK HOLDINGS, the Strathclyde-based manufacturer of printed circuit boards used in the computer, electronics and telecommunications industries, yesterday reported a decline in full-year pre-tax profits, despite a 20 per cent increase in turnover.

Pre-tax profits slipped to \$91,000 in the year to July 31 compared with £109,000 last time, mainly reflecting sharply higher net interest charges which grew to £455,000 (264,000) as the group raised its borrowings to help fund acqui-sitions and internal invest-

The company is dipping into reserves to pay an unchanged final dividend of 1p per share, which with the interim dividend, will maintain the total at 1.5p. The board said it felt justified in recommending the payment out of reserves because of the prospects for the group.

(225.3m), and profits before tax

(£173,000), after charging exceptional items of £76,000 (2373,000.)

During the year Prestwick completed four acquisitions, Band Electronics, Prestwick-GTN, Electroconnect and Northumbria Circuits, at cost of £704,000. Following the acquisition of

Electroconnect in October last year Prestwick spent £3m on a capital investment programme on advanced design and manufacturing technology designed to enhance the group's ability to meet its customers' needs from initial design concept to volume manufacturing. Mr Wayne Osman, chief

executive, said the company had invested about £6m during the year, and had moved from zero borrowings to net borrowings of about 24m at year-end. After allowing for a £15,000

tax credit (nil) and £216,000 (£218,000) in preference share dividends the group posted an he group. increased loss of £110,033 Turnover increased to £30.4m (£108,780), equivalent to losses

#### Sears continues retailing drive

By Jane Fuller

SEARS' drive to focus on retailing and mail order may be finalised this year with the disposal of its Calliford housebuilding business.

Mr Geoffrey Maltland Smith, chairman, said this could incur a further extraordinary charge this year on top of the £84m included in the interim results. All but 22m of this sum was for the shedding of men's wear through the sale, announced last week, of Fosters and Your Price to management for £1.

Galliford used to contribute up to £30m a year in trading profits, but the group decided to give it up in July 1990. The only provision made then was for the carrying costs "to avoid it impacting on the profit and loss account

The portfolio had since been run down from £109m to £58m and £11m cash was released in the first half of this year. The original plan was "to develop it out by July 1994". The group was considering whether to dispose of it within the next six months, possibly via a management buy-out.

Housing sales, "tax planning" and cash generation had helped reduce net debt by £75m in July 1991 to £133m this time. gearing of 11.3 per cent. Net interest costs, however, rose to

28m (£7.3m) as the amount capitalised in Galliford was cut from £4.9m to £2.8m.

Recession finally caught up with the home shopping divi-sion, where trading profit fell from £15.3m to £11.9m on sales of £264.9m (£249.8m). "It hit the wall quickly last year leaving a cost overhang," said Mr Liam Strong, chief executive.

The subsequent cuts had included 300 jobs, 6 per cent of the workforce. The annual savings would amount to between £3m and £5m. Sears paid £477m for the Freemans mail order business in 1988 and failed in its bid to

expand it last year by buying Grattan from Next.
Mr Strong said he hoped to push Freemans' annual trading profit up to more than £30m.

In speciality retailing, womon's wear was the biggest con-tributor with £6.5m (£5.6m) profit on sales of £243.6m (£214m). Miss Selfridge - which claims 20 per cent of the disco clothing market - and Wallis, aimed at 25 to 35-yearolds, had performed strongly.

Selfridges department store sion to itself, enhanced its productivity in a period of slug-gish sales caused by a lack of tourists. Trading profit rose to £5.5m (£4.9m) on sales of £94.6m (£92.7m).

#### Winding up petitions add new twist to Blystad bid

LEGAL NOTICE

A DISAGREEMENT between directors of the Blystad Group over the conditions of a £7.5m paper bid has taken a new twist with the issue of winding up petitions against two companies connected with three of the directors, all members of the Norwegian Blystad family.

The petitions are part of a campaign by directors outside the family to recover a \$3.9m (£2.3m) loan to Sokana Industries, which is controlled by the family. Sokana and the South Pacific Banking Corporation are the subject of the Three Blystad brothers hold-

ing 65 per cent of the loss-mak-

The non-family board mem-Surrey bers, including the managing director and finance director. Group back and Henry Ansbacher, finan-

in the red of interest over the loan from Blystad to Sokana Industries. SURREY GROUP. Abbot's approach to the loan, USM-quoted bookmaker. set out in the press release announcing the bid, is not to returned to losses in the second half of the year to March 31. And with further substantial losses expected in the present six months it is changing its acquisition strategy in

order to cut debts. At its flotation in 1989 it intended to reach critical mass for economies of scale by buying betting offices. However, the chairman said that the level of borrowing had become excessive compared with its ability to service it in the light of poor trading.

In the year to the end of March pre-tax profits were 25,000 against losses of 2216,000 in the previous year. Interim profits had been £117,000. From turnover of £49.5m (£35.8m) operating profits were £766,000 including £611,000

from the sale of betting offices and other operating income. An extraordinary charge of £398,000, relating to the company's former cricket centres which went into liquidation before the full consideration had been paid by the new own-

ers, left the retained loss at

£295,000 (£404,000).

Earnings per share came out at 0.07p, helped by a tax credit of £98,000 (£65,000), against losses of 0.15p. The final dividend is being passed. Last time there was a single final payment of 0.05p. Shipping side behind

#### Global's 31% fall

The recession-hit shipping side left pre-tax profits at Global Group down 31 per cent from 2959,000 to £658,000 in the first half of 1992.

Operating profits for ship-ping were halved at £408,000 (£806,000). Falling volumes at Goole and difficult conditions for the fork lift business were However the food activities

increased profits from £500,000 to 2668,000. Canterbury Foods had an "excellent" first half and the result for meet trading had been "very satisfactory". Group turnover in the first half for this USM-quoted company increased 7 per cent to £38.5m (£36.1m). Net interest payable was higher at £418,000 (£347,000). Earnings per share were 0.4p (0.59p) and the interim dividend is again 0.2p.

3 per cent in the first half of this year. This resulted in a

similar drop in nickel demand Prices have also been depressed by a substantial increase in Russian exports to the west. Through most of the 1980s communist countries' net exports to the west amounted to about 35,000 tonnes a year. Russian exports reached 120,000 tonnes in 1990 and 1991 and this year are expected to be about that level again.

Mr Roger Chaplin, analyst at Credit Lyonnais Laing, said: "With western economies recovering more slowly than expected at the start of 1992, the outlook for nickel markets in the medium term appears grim." He expected the nickel price to average \$3.50 a lb this year and said it would be doing

well to reach \$4 next year. Mr Chaplin suggested that Inco's all-in production costs were about \$3.25 a lb so it was suffering losses in the second half of 1992 and, "unless there is a substantial rise in the nickel price, it will make losses

#### Pact disappointment hits coffee market

Dy Daytel Blackwell

COFFEE PRICES fell sharply in London yesterday as the market registered disappoint-ment at the lack of definitive progress towards a new inter-national coffee agreement at talks in London scheduled to

end today. The London November robusta contract closed at \$774 a tonne, down \$23 on the day, after recovering from an ear-lier low of \$763. In New York the December arabica contract was off by 1.40 cents in late trading at 53.85 cents a lb.

Analysts believe the markets will head downwards again it today's final communique from the International Coffee Organisation is as anodyne as they

On Monday last week the markets shot up on optimism over the ICO talks, and the London robusta contract reached \$816 a tonne. "We have seen this euphoria at the start of each ICO meeting," said Ms Judith Ganes, an analyst at Merrill Lynch in New York. "And then as the meetings turned sour, the market quickly reversed course and

tumbled to new contract lows."
It appears that nine days of talks will end with only one concrete sign of progress - a proper definition of the "universal quota" - and that was agreed last Tuesday. Such an export quota system would be problems remained of defining controls and "selectivity" which would allow consumers

to import the type of coffee they want.
The principles of export control regulation have been broadly agreed in principle, and proposals on selectivity

were being discussed late las to satisfy the markets, which ress towards a new pact, according to Mr Lawrence Eagles, analyst with GNI, the London futures broker.

The ICO will meet again in December, but between now and then there is little chance of substantive negotiations behind the scenes. The US, the biggest consumer, has the Presidential elections coming up, and Brazil, the biggest pro-ducer, has presidential troubles of its own.

#### Mauritius plans to overhaul flagging sugar industry

Julian Ozanne on the challenges faced by Africa's third largest producer in a changing market

CRITICAL strategic nificant liberalisation is vital review of the Mauritian sugar industry is being undertaken by the government and producers as the sector, the backbone of the economy, confronts the prospect of declining revenues for its annual production of 600,000 to 850 000 tonves.

Production last year dropped to 611,340 tonnes from 624,302 tonnes in 1990 as a result of drought and continued contraction in the area planted. Concerns are mounting in Mauritius that this trend will continue as revenues are forecest to stagnate or decline as the European Community considers reducing the guaranteed support price paid to African Caribbean Pacific (ACP) producers under the Lomé conven-

A major overhaul of the industry is now critical if Mauritius, Africa's third largest sugar producer after South Africa and Egypt, is to remain competitive and productive in a changing world market. A report drawn up by the

Mauritius Chamber of Agriculture lays down the guidelines for a reappraisal of the sector. It warns that the industry has come to a crossroads and that if major hard policy decisions are not confronted now the industry's decline is inevitable. At the heart of the concerns voiced by the 19 big estate producers, who account for 62 per cent of cane production, is the need for a fundamental reas-

sessment of the role of state

intervention in the industry. However, there appear to be growing differences between the powerful sugar lobby and the government over what role the state should play. The Chamber of Agriculture says that the sugar industry is heavily regulated and that sig- that the government is not

to restore the sector's profitability and preserve its international competitiveness. "If reform does not take place," the chamber warns, "there is a very real risk that resources will gradually be siphoned off from the sugar industry to other sectors.

The chamber has put forward a number of policy recommendations to a joint government-private sector working committee, which

 Price liberalisation - The industry argues that price con-trols on domestic sales make Mauritian sugar the cheapest in the world and force the industry to subsidise the consumer by up to 50 per cent of the cost of production. Reform and Reduction in taxation, export duty and gov-

 Abolition of restrictions which prevent a miller from closing an economically unviable factory at will.

 Improved incentives for investment in the milling sec-

lready this year the government has responded to some demands made by producers. The June budget provided for the lastic of tax free debentures by sugar companies for the modernisation of their equipment and removed customs duty on mechanical harvesters. In August the government also substantially increased the domestic price of sugar inject-MR60m (22m) into the industry. Mr Madan Dulloo, agriculture minister, says other measures will be considered to amend the Sugar Indus-

try Efficiency Act before the end of the year. But he warns

(Prices supplied by Amelgemeted Metal Trading)

fotal delly turnover 39.931 lots

going to give in to the "propa-ganda" of sugar barons and that, given the pivotal importance of the sector to the econ omy, any policy changes will have to be balanced within a political, economic and social context and will have to ensure the protection of the 33,000 small planters.

The debate on the proper role of government in the Mauritian sugar industry is likely to continue for several vears and any changes will probably be minor.

In the meantime both government and producers are working on the areas on which they do agree, which include: • The need significantly to boost sugar yields from the present rate for the estate sec tor of 8.5 tonnes a hectare (3.4) tonnes an acre) to 10 tonnes or more by better irrigation tech-

 Encouraging small holder farmers to regroup in Land Unit Management Areas to enable them to take advantage of better mechanisation for land preparation and harvest-

Continuing the develop-

ment of an international marketing policy which increase annual sales of 75,000 tonnes of premium sugars like demerara and molasses sugar. Finding new ways to add value to by products of the sugar industry and intensify

agricultural diversification. If the government and producers can find creative ways to implement many of these measures the industry hopes to store its competitiveness and profitability and to restore production to the 1973 peak level of more than 700,000 tonnes to reduce costs further and be able to capitalise on new opportunities on the interna-

tional market.

#### Gummer urges subsidy block on polluters

By David Green

THE EUROPEAN Community should have the power to suspend payment of subsidies to farmers who abuse the environment, Mr John Gummer, the UK minister of agriculture and current president of the EC Agricultural Council, said esterday.

He said individual governments could withdraw payments under national schemes but did not have the power to do so under community

Mr Gummer was speaking after chairing an informal meeting of EC agriculture minsters at Cambridge.

He said those few farmers who behaved in a way that was clearly damaging to the environment should not receive EC support. In the absence of such powers, the Common Agricultural Policy suffered as a result of public opinion, which wanted farmers to not only produce food but to be guardans of the countryside.

Mr Gummer said he did not believe that environmental protection should be an optional choice for the counries of Burope.

He wanted to see duties of environmental care written in to as many of the EC market support systems as possible. However, he made clear that

not all EC agriculture ministers agreed with the need for more environmental regulations at a time when their farmers were already trying to come to terms with reform o the CAP. "Mr Gummer's environmen-

tal fig leaf has finally wilted, was the comment of Mr Hugh Raven, co-ordinator of the Safe ture, Food and Environment), on the minister's statement which he said acknowledged "his dismal failure to have environmental criteria incorporated as part of the CAP sup-

#### MARKET REPORT

Sentiment in most of the LME base metals remained depressed by rising inventories slack demand, and sluggish economic growth prospects. The latter factor was underlined by US economic data - August leading indicators fell 0.2 per cent, while September consumer confidence dropped to 56.4 from 59. COPPER continued to decline, dropping to the lowest levels for three months with stocks rising again. Final business was at the low of \$2,360 for three-month metal, \$19 down from Monday. In contrast ZINC ralifed in kerb trading on late short covering to end at the day's highs after

#### LONDON STOCK EXCHANGE

#### FT-SE recovers losses in late rally

By Terry Byland, UK Stock Market Editor

A SOMEWHAT surprising rally in the UK stock market yesterday afternoon was accompanied by a spate of rumours of impending developments, ranging from a bid for a stock in the FT-SE list to cuts in German interest rates. Some traders sounded sceptical, however, pointing out that fund portfolios were being polished up for the close tonight of the third quarter of the year, and that stock index futures had been bid up heavily yesterday. By the close, the Footsie had recovered all and more of its early setback of 28.5 points and the final reading of 2,565.5 showed a net gain on the day

The strong upswing towards the end of the session was encouraged by a powerful recovery in the pound against the D-mark. In the background, however, uncertainty over the economic policies of the UK government and the outlook for domestic interest rates continued to restrain activity.

There was still room for confusion over the near term prospects for a change in UK economic policies. Evidence of further strains over Europe inside Britain's governing Conservative party, together with the progress of the annual conference of the Labour opposition party, added to the general uncertainty. The stock market reacted to

a strong warning against taking risks with sterling from Mr

Robin Leigh-Pemberton, the Governor of the Bank of England. The City of London read this as a discouragement for early cuts in base rates. Mr John Major, the UK prime minister, reiterated his belief that he can persuade other European leaders to his view on the problems within the ERM.

Equity trading volume, lower in the first half of the trading session, turned smartly higher

when the market rallied. The day's Seaq total of 533.8m shares compared with 487.6m on Monday, when retail business worth £1.2bn maintained the significant upturn in business seen since Britain's departure from the European monetary system.

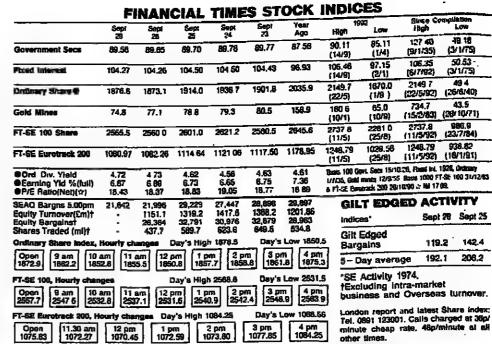

The Footsie Index was helped by a recovery in the pharmaceutical stocks which have borne the brunt of London's reaction to comments in the US presidential campaign from Bill Clinton on medical spending.

But domestic stocks remained uneasy after this week's heavy brokerage downgradings of ICI cast a cloud over the more optimistic earnings valuation put on the market in the wake of Britain's

withdrawal from the ERM and the cut in UK base rates. An indication of more favourable attitudes was shown in a sharp rise in shares in Sears, the leading UK store group and owner of Selfridge's store in London's Oxford Street, despite confirmation of

a widely-predicted cut in the dividend payout. However, the rest of the retail sector stocks remained weak yesterday after the Sears board said there was still no sign of any recovery in

consumer spending.
Renewed worries over the levels of consumer and business debt were also reflected in further selling of bank stocks which are now fast losing the gains achieved in the initial response to the market's hopes of lower interest rates.

#### Strong gain in Sears

of 5.5 points.

A DIVIDEND cut, deepening losses and huge restructuring costs at Sears had the seemingly contradictory result of sending the stores group's shares sharply forward in brisk turnover. Sears cut its interim dividend from 1.525p to 1p after reporting a pre-tax interim loss of £8.8m. It took a provision of £32.2m for rationalisation of its shoe subsidiary and an £84m extraordinary charge following its withdrawal, announced last week, from menswear retail-

However, with the bad news well signposted, the results were already in the share price, while the dividend cut at least removed uncertainty surrounding the dividend policy.

Analysts also reported a positive post-results meeting. Sears has bitten the bullet and the market can now look at the potential for recovery of the company," said Ms Kimlan Cooke at County NatWest, who yesterday moved from a sell to a hold on the stock. "But the shares do not look cheap and Sears has some way to go before it is out of the woods."

Mr Nick Hawkins at Kleinwort, brokers to the company, was more bullish. "While the dividend cut was not as large as some had wanted, the issue is now resolved. Investors can now focus on the underlying business and the prospects for growth." Sears shares climbed 8 to 80p, with turnover of 24m making it the heaviest traded

#### Banks sold

Bearish noises from County NatWest put substantial pres sure on a banks sector that has recently outperformed the wider market.

"The sector was at a 10-year relative high and included too much in the way of recovery hopes built into it," said Mi John Aitken, banks analyst at County.

He targeted the whole sector as ripe for profit-taking but picked out current earnings forecasts for Lloyds and TSE as especially liable to revision. Mr Aitken warned that Lloyd exposure to the Maxwel empire could be greater than previously thought.
On TSB he said his current

year profits estimate could be as much as 30 per cent to high, implying a potential downgrade from £220m to £150m. He cited Hill Samuel's property lending book as a cause for concern as well a TSB's ordinary banking bad debts. Mr Aitken's caution on Barclays largely reflected property market.

County's bearish views on Lloyds triggered a 21 slide in the shares which closed at 431p after turnover of 2.6m. Barclays lost 11 to 351p on 4.2m traded. TSB were barely

changed at 133p.

Fisons, the troubled chemicals, group was one of the Footsie stocks spoken of as a potential takeover target, the shares edging up 3 to 187p, on good turnover of 4.4m shares. After several uncomfortable

sessions, chiefly at the hands of US investors, pharmaceutical stocks rebounded as some UK brokers decided the retreat had been overdone.

Glaxo jumped 18 to 784p. SmithKline 19 to 492p and Wellcome 11 to 920p. More downgrades of ICI yesterday, following on from Monday. continued to undermine the shares. They closed 16 off at

Enterprise Oil shares. heavily supported by US investors over the past couple of weeks ahead of news of Mondev's ADR listing in New York. maintained their strong performance to close a further 14 higher at 426p on relatively high turnover of 1.9m. Lasmo also performed well, edging up 2 to 162p on 2.8m.

Burmah Castrol, on the other hand, were upset by news that Strauss Turnbull had removed the stock from its buy list, rating it no more than a "hold". Strauss said it would not discourage profit taking at the current level.

BP mirrored the overall market mood, slipping 4 to 213 %p on 8.3m traded, and was also affected by suggestions that investors were switching out of the stock and into Shell, which hardened to 539p on good turn-

over of 5.4m. Utilities made good progress at the outset but relinquished much of their early gains as the session wore on. British Gas settled 2 better at 245p on 8.7m. In the electricity distribution stocks Midland held on to a gain of 7 at 405p, while the water stocks showed Thames 9 firmer at 451p.

The power generators staged a useful revival, still boosted by hopes that a favourable new five-year deal with British Coal will be revealed in the near future. PowerGen closed 81/4 up at 286p and National Power rose 6 to 275p.

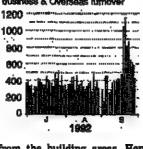

Supermarket group Kwik Save surrendered 12 to 672p after Cazenove was reported to have crossed 1.5m shares at 660p. Northern Foods was the subject of "take profits" advice from BZW, among others. The shares lost 4 to 167p. Airtours moved ahead 8 to

237p as Hoare Govett recommended the tour group, arguing that the shares have the potential to go to 280p. Rival Owners Abroad added 4 to 60p. In the other industrial materials sector, English China Clays lost 19 to 425p, after BZW

from the building areas. Hepworth plunged 40, or 14 per cent to 243p, damaged by suggestions that the company's own broker, James Capel, had chopped its current year profits estimate to around £44m. Meyer International fell 21, or 9.5 per cent, to 200p, Heywood Williams 15, or 8 per cent, to 164b, and Tarmac 51/4, or 6.8

per cent, to 75p. Rediand, due to announce interims tomorrow, recovered strongly after a bout of heavy

selling early in the session, and closed only 3 off at 358p, having been as low of 346p. Shares in British Steel shed 3 to 58p, after Smith New Court lowered its current year

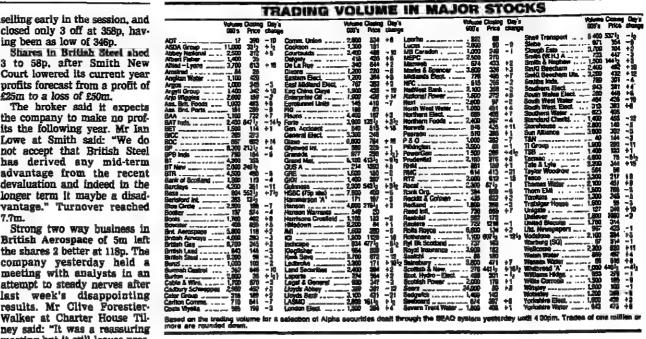

£25m to a loss of £50m. The broker said it expects the company to make no profits the following year. Mr Ian Lowe at Smith said: "We do not accept that British Steel has derived any mid-term advantage from the recent devaluation and indeed in the longer term it maybe a disadvantage." Turnover reached

Strong two way business in British Aerospace of 5m left the shares 2 better at 118p. The company yesterday held a meeting with analysts in an attempt to steady nerves after last week's disappointing results. Mr Clive Forestier-Walker at Charter House Tilney said: "It was a reassuring meeting but it still leaves prospects about the future uncer-

TI Group ended 11 lighter at 290p on the weaker US dollar and nervousness about the levels of provisions at its Dowty Group subsidiary, due to be announced tomorrow.

MARKET REPORTERS: Joel Kibazo, Steve Thompson Christopher Price.

#### **EQUITY FUTURES AND OPTIONS TRADING**

THE IMPROVED performance of sterling together with suggestions of a cut in German interest rates led to a late ze in stock index futures and enlivened an otherwise poor trading session, writes Joel Kibazo.

The December contract on the FT-SE opened for business at 2,609, a 54 point premium to the cash market, and quickly went into retreat on the back of reasonable selling and fading hopes for a cut in UK interest rates, it had follon to 2,572 by midday.
A period of sideways trading followed before the improved

performance of sterling and rumours of a cut in German interest rates caught the early sellers on the hop. This led to a squeeze which sent the contract sharply forward. December finished the session at 2,628, a 5 point improvement on Monday's closing level and

around 22 points above its estimated fair value premium to cash of about 40. Turnover was healthy and it reached 11,340 by the close.

7

Business in the traded options was much improved and turnover rose to 31.884 contracts, up from Monday's poor 20,382 lots. The FT-SE 100 option more than doubled to 15,563 lots. Barclays was the busiest stock option with a day's total of 1,319 contracts.

#### Dollar loses ground to DM

increasingly gloomy view of the US economy, writes James

As tensions continue to unwind in the European exchange rate mechanism, the dollar is losing its status as a safe haven currency and dealers have more time to focus on the fundamental weakness in the US economy. This switch of attention looks set to continue throughout this week, with Friday earmarked as a decisive day for currencles in both Europe and the US in the

medium term.
On Friday morning, the
Bundesbank council will meet for the first time since the ERM crisis, with many dealers thinking that there will be another cut in short term another cut in short term rates. At lunchtime, the non-farm payroll figure for August will be released, giving dealers and the Federal Reserve the clearest indication yet of whether another cut in interest rates is needed.

The view that a US rate cut was in the offing gathered momentum yesterday. The US leading indicators fell 0.2 per cent in August, some way adrift from market forecasts of

THE DOLLAR lost nearly three pfennigs against the D-Mark yesterday as traders took an ber dropped to 56.6, the weakest reading in seven

> According to Mr Jeremy Hawkins, vice president at Bank of America in London, these figures suggest that the non-farm payroll figure will be poor. "The dollar could well revisit the old lows on the assumption that there is every chance of a cut in rates, compounded by uncertainty over the US election, he said. The dollar closed in London at DM1.4240, compared to a previous close of DM1.4510.

How low the dollar goes depends on what the Bundes-hank does this Friday. When it cut its Lombard rate by 0.25 per cent on 14 September, the Bundesbank gave the strong impression that this was all it could afford for the time being.

ERM will not hold togethe may bring a rate cut. The Bundesbank is committed to avoiding a French franc devaluation, but yesterday the French currency lost some of the ground made on Monday, closing nearly a centime down against the D-Mark at FFr3.3810. That is nearly 5 centimes above the ERM floor against the D-Mark. But over-night rates in the French cash market remained at the 26 per cent to 28 per cent level yester day, suggesting that the French money markets are taking a cautious view of the situ

#### MONEY MARKETS

#### Uncertainty reigns

THREE month money in the sterling cash market fell below the 9 per cent base rate figure as dealers started to discount the possibility of another cut in UK rates before next week's Conservative party conference. The rate for three month money fell to 813 per cent on the offered side as dealers spec-

ulated that the Chancellor would take the opportunity to cut rates next week. That view was reinforced by sterling's slightly stronger performance on the foreign exchanges, with the currency rising more than a pfennig against the D-Mark yesterday to close at DM2.52.

UK clearing bank base lending rate 9 per cent trom September 22, 1992

However, there is continuing doubt about the direction of the UK government's economic policy, and trading was thin. Sterling futures tracked a different course from the cash market. The December contract fell one basis point from its opening level of 91.81 to close at 91.80, reflecting a slightly firmer view on rates. Strictly speaking, the closing price assumes that 3-month money at the year's end will be

at 8.2 per cent. There was no clear to £500m and late assistance indication from the German was provided of £55m.

money market as to the possible outcome of this Friday's Bundesbank council meeting. The German central bank again drained liquidity from the money market in the morning by sales of short-term Treasury bills. It is trying to combat the after effects of the recent interventions to support

sterling and the Italian lira. The colossal scale of that intervention is becoming increasingly clear, with the bank reporting that its gross currency reserves were boosted by DM44.3bn in the week to September 23. This does not take into account the full cost of intervening to support the French franc, and one London-analyst believe that the final cost may be around

DM90bt1 However, the Bundesbank later tempered the move by lending funds to banks at a rate well above the market level. It injected paragraph 17 fund into the market at a rate of 9.20 per cent, slightly above call money which traded at

8.80-9.00 per cent. In its money market operations, the Bank of England forecast a shortage of £300m in the morning and, in early operations, purchased £450m in a repurchase agreement at 81 per cent. The forecast was later revised down

# Hopes of rate cut stop Dow falling further

#### Wall Street

US SHARE prices ended slightly lower vesterday after hopes for another cut in interest rates were overshadowed by more bad news on the economy, writes Patrick Harverson

At the close the Dow Jones Industrial Average was down 9.46 at 3,266.80, while the more broadly based Standard & Poor's 500 ended 0.18 higher at 416.80. The Amex composite slipped 1.64 to 375.61 and the Nasdaq composite added 2.29 at 577.63. Turnover was 171m

The morning's economic news sparked an early sell-off. The Conference Board announced that its September index of consumer confidence fell to 56.4, from 59.0 in August. The decline was bigger than expected, and when combined with news of a 0.2 per cent nomic indicators, confirmed that economic conditions throughout the country remain

Although depressing, the fig-ures raised hopes that the Federal Reserve might cut interest rates one more time, and this prevented share prices from if the September employment report is particularly weak.

Among individual stocks the big feature of the day was Sears Roebuck, which after a delay because of an order imbalance on the buy side. jumped \$3% to \$44% in turnover of 5.4m shares after the giant retailer announced it was selling off a large chunk of its

SAO PAULO closed up 7.7 per cent at 45,316 yesterday, writes Bill Hinchberger in Sao Paulo. Trading was heavy, at just over \$100m, up from \$70m on Monday. The market closed prior to the parliamentary vote on the impeachment of President Fernando Collor de Mello, but the upsurge reflected growing expectations during the day that the resolution would be approved.

profitable financial services operations. The deal, which should raise more than \$3bn in cash to reduce group debt, was seen as a move to realise shareholder value and allow Sears to concentrate on core busi-

Rail stocks were also active after securities house Morgan Stanley recommended the sector. Among those to benefit most were Consolidated Rail, falling too far yesterday. Investors were speculating that the up \$1% at \$40%, CSX, up \$1 at

\$59, Norfolk Southern, \$% higher at \$55%, and Union Pacific, \$% firmer at \$54%.

Times Mirror fell \$1% to \$31% after the newspaper publishing group warned that August advertising revenues were down 5.6 per cent on a

Middleby soared \$% to \$2% on the American Stock Exchange after the company said it won a \$27m verdict in its breach of contract action against Whitman Corp, which fell \$14 to \$121/4.

#### Canada

TORONTO stocks suffered their biggest one-day drop since April as a plunging Canadian dollar and uncertainty surrounding the upcoming con-stitutional referendum affected

The TSE 300 composite index sank 40.75 points, or 1.21 per cent, to end at 3,327.24. Declining issues swamped advances 414 to 179. Volume was 36,206m shares worth C\$396.8m against 23.625m shares worth C\$266.6m on Monday.

Petro-Canada was up 1/2 to 9% after it said it will cut its debts. Telepanel shares jumped 0.475 to 5% after it signed a marketing agreement with IBM Corp. BP Canada stock was up

# Investing after the currency turbulence

Three international money managers discuss their views with Peter Martin

I you are a fund manager, how you view the events of depends on where you sit. For sterling-based international investors, the devaluation of the pound has produced a helpful boost to performance: in sterling terms the FT-Actuaries World index excluding the UK has risen by 13 per cent in the past three weeks; in dollars it has fallen 2 per cent.

For investors elsewhere, the news has been more mixed. As the chart shows, since the Bath meeting of EC finance ministers at which the ERM's tensions first came to a head in early September, only three of the ten stock markets shown have risen in value in local zerland and the Netherlands. The others have all fallen, with Japan - down nearly six per

cent - the worst performer. For one international manager, Henry Looser, head of private banking at Bank Julius Baer in Zurich, a lot has changed in the past few weeks. Until recently, he had taken erations. The dollar is still his most aggressive equity position of the past 20 years. cheap on a purchasing power Now, with rallies in the UK, basis, he argues; sterling could

Switzerland and Italy, he has Country performances readjusted his portfollos towards a more normal weighting, pulling out of a number of equity markets entirely. "We have no further holdings in Italy or Spain," he said yesterday, "and Britain is a market we have really sold out of in the last two to three days and we have even started to go

In equity markets generally, the risk of earnings disappointments is high, he believes, and it will be possible to buy back in at lower levels. "There is a lot of disappointment ahead," he says. "It's a minefield, and we will see mines exploding, taking the market down with

In particular, the outlook for

the German economy is very poor, he says, and D-Mark interest rates are likely to remain at high levels into the first or second quarter of 1993. For Robin Apps, head of European equities at UBS Phillips & Drew Fund Manage ment in London, the outlook is dominated by currency considActual % changes in local terms · UK {

US France Hong Kong Australia : Canada

-5 go a lot lower if the British government decides to dash for growth; the French franc has probably escaped Imminent danger of devaluation against the D-Mark but at a price - in terms of short-term interest rates - that may prove unsustainable

"As a house we've been per ennially bearish on equities, he says, because of an overall expectation of recession, and

that position has not changed. 'At the margin, however, in certain countries one might expect slightly more growth. One of these is the UK, "if it can get away with a beggarmy-neighbour devaluation.

Germany is slowing down quite markedly, he believes, with little prospect of an interest rate easing there until the federal government either raises taxes or cuts back on payments to the east. "That is the moment at which the Bundesbank will ease," he

ven before that moment, however, he is over-weight in Germany, believing that many German companies would offer good value if they were managed on an Anglo-Saxon basis, with return to shareholders the central consideration, "Whether they ever do that is debatable, however," he says. That long-term play is also

part of the investment strategy of William Holzer, who manages the Scudder Global Fund in New York. Like Apps, he is significantly overweight in Germany and Switzerland. In other respects, however, his views offer a marked contrast: as a US-based manager, he can afford to display an Olympian disregard of the events of the last few weeks.

He is overweight in Switzerland not so much as a country decision but because he believes "you can buy global companies cheaper there than anywhere else." Elsewhere, his decisions are dominated by big-picture themes. The last-big shift, into undervalued than cial services companies, dated back "a couple of years or so".

He thinks another big shift is coming up soon, to sdaft to the impact of an ageing beby boom and a shift of manufacturing out of developed countries to the Third World. The dynamic of the old system was the inflation of collateral," he says. "This time round, it is the infinite ability of the ldcs to absorb capital and offer a high return on it."

That leads him to favour global companies which are the essential technology transfer agents for this process, and savings institutions which will handle the baby boomers' need

# Late buying brings Paris little consolation

## September book closing fails to give Nikkei a lift

#### Tokyo

SMALL-LOT selling and futures-linked arbitrage unwinding depressed share prices in thin trading, and the Nikkei average closed down in spite of buying by public funds, writes Emiko Terazono

in Toiquo. The Nikkei index fell 224.52 to 17,748.09 after a high of 18.068.21 and a low of 17,565.21. Volume rose to 240m shares from 203m. Declines led advances by 818 to 151 with 188 unchanged. The Topix index of all first section stocks fell 17.37 to 1.331.72 and, in London, the ISE/Nikkei 50 index fell 0.29 to

Traders noted small-lot buying by public funds in the morning session. However, institutional investors remained inactive, prompting disappointed investors to liqui-

date holdings. Expectation of a rally ahead of the September book closing had previously lifted share prices. However, Mr Yasuo Ueki at Nikko Securities said that since banks have been exempted from including valuation losses on stockholdings in their interim earnings results, large-lot window dress-

ing has not been seen. The yen moved alightly higher against the dollar, depressing exporters. Toshiba fell Y23 to Y575 and Fujitsu lost Y27 to Y578. Toyota Motor declined Y40 to Y1,370 and Nis-

san fell Y31 to Y581. Speculative short term traders dominated business. Mitsul Mining & Smelting, the most active issue of the day, fell Y10 to Y-198. Aids-related issues lost ground, with Meiji Milk Products down YI to Y990 and Green Cross down Y40 to

Kubota, a leading maker of as the market paid little attenfarm equipment and ductile iron pipes, rose Y19 to Y570, on its classification as a leading environmental stock.

Hazama, the construction company which will become a component stock of the Nikkei index next month, rose Y5 to Y506. Selka also drew buying interest, adding Y7 to Y703. Godo Shusei, which in turn

will be dropped from the Nikkei on October 1, rebounded on bargain hunting, advancing Y28 to Y598. The issue was sold heavily on Monday due to the announcement of the exclu-

In Osaka, the OSE average lost 350.52 to 19,151.72 in vol-

#### Roundur

APART from Taiwan, and in some individual shares, the region's equity markets moved

narrowly yesterday.

BANGKOK saw Krisda
Mahanakorn, the property
group, hit its 10 per cent downward limit for the second consecutive day. The SET index was 1.45 higher at 850.52 in turnover of Bt12,2bn.

Krisda Mahanakorn dropped Bt20 to Bt184 in turnover of Bt2.3bn while Bangkok Land lost Bt2 to Bt133. TAIWAN rose on institu-

tional buying of blue chips, but brokers said that investor confidence remained weak. The weighted index closed 45.66 or 1.4 per cent higher at 3,397.29. Turnover dropped to T\$10.8bn. NEW ZEALAND continued its fall as FCL lost 9 cents to NZ\$1.91. The NZ\$E-40 capital

1,426.07 in turnover of NZ\$30m. Carter Holt closed up 4 cents at NZ\$2.58 while Air NZ lost 9 AUSTRALIA ended weaker

HK\$1.78bn from HK\$1.57bn. MANILA was stronger on

bargain-hunting as PLDT made

selective gains in blue chips. The Straits Times Industrial index rose 3.98 to 1,353.79 in volume of 51.9m shares. KUALA LUMPUR reversed

three consecutive days of advances and the composite index shed 4.72 to 605.93. Falls led rises by 210 to 60, in vol-ume of 63.7m shares against Monday's 119m.

BOMBAY fell in thin volume, displaying neither investment nor speculative interest as the BSE index fell 44.23 to 3,195.75. Brokers said that the market was drifting shead of a four-day holiday weekend beginning this Friday.

#### SOUTH AFRICA

JOHANNESBURG eased on continued uncertainty over domestic political developments. Buying of index-linked shares kelped the industrial index bounce off lows to close 1 down at 4,196. The overall index eased 4 to 3,198 and golds fell 7 at 896.

Markets Staff.
PARIS fell another 2.1 per cent as hopes for an easing in interest rates diminished. Some analysts also pointed to the weakness in the dollar and arbitrage between the futures and cash markets. The CAC-40

turnover of A\$289.9m. TNT closed 3 cents lower at A\$1.00 following news that Sir Peter Abeles, the managing director, had resigned to concentrate on the group's Ansett

HONG KONG eased after institutional selling reversed morning gains. The Hang Seng index fell 15.28 to 5,581.92 after rising almost 40 points in the morning. Turnover rose to

steady gains. The composite index gained 8.89 to 1,395.36 in gained 5 peacs to 970 peacs. SINGAPORE was steadier on

BRUSSELS hit trouble in steel shares. Clabecq, which announced heavy job cuts and salary reductions on Monday as part of a restructuring programme, crashed 19.3 per cent to BFr460 after trade was helted several times for limitdowns. The Bel-20 Index fell

1.90 to 1,107.20. Meanwhile the Luxembourgbased Arbed showed a severe drop in first half profits and fell 4.6 per cent to a 1992 low of BFr2,655, before plans to cooperate on long steel products with French steel giant Usinor-Sacilor allowed it to recover to BFr2,760, just BFr20, or 0.7 per cent down on the day.

FRANKFURT saw some price volatility below international blue chips level as the DAX index rose 1.22 to 1,476.26.

Turnover rose from DM3.8bn to DM4.2bn. Most carmakers recovered from early lows after being hit hard on Monday. rose DM3 to DM470 after DM461.50, and Volkswagen DM3.50 to DM279.50 after

FINANCIAL TIMES SURVEY

# PERSONAL COMPUTERS AND SOFTWARE

**SECTION III** 

Evidence for the profound changes sweeping the industry has emerged with PCs moving to centre stage.

But the revolution, which this year has also seen prices tumbling, is presenting problems for the manufacturers, writes Alan Cane

# A time for bargains

THE turnaround in the have made a dash for the lower computer industry is as shattering as if the earth had finally been revealed as the true centre of the galaxy, circled by the sun, moon and

In the past year, the lowly personal computer has emerged as the mainstay of the computer business. In just over a decade it has been responsible for carving a new profile for the industry while destroying a market infrastructure built up over 30 years.

Some will argue that this has been inevitable since the Apple II made its debut in 1978, despite the refusal of many in the mainframe business either to see or accept the decline of the traditional industry.

Nobody now doubts, however, that the future of data processing lies with PCs and workstations linked in powerful networks rather than with mainframes, minicomputers and data centres. Mainframe computers will increasingly be relegated to a peripheral role as network servers, in contrast to their former position at the hub of corporate data process-

A number of remarkable developments over the past 12 months or so have signalled the industry's acceptance of the PC in its new role.

First, PCs have become commodities. Traditional computer

\$8.00\$\$ [20] \$10.00 \$1

ground this year, launching new ranges of PCs at astonishingly low prices. Computer users therefore have the choice between "value for money" or

"premium" products. Some manufacturers, such as International Business Machines (IBM), have tried to disown their bargain basement products: in Europe, IBM has established a separate, whollyowned company to sell Ambra

Others, including Compaq, the US-based leader in high performance PCs, and Zenith, the PC arm of Groupe Bull of France are trying to establish the two distinct categories of product within the same range, Hewlett Packard, on the other hand, is opting only for the low-price approach. The

large manufacturers have been driven to adopt these strategies by the continuing success of no-name" or clone manufacturers who now hold close to half the global PC market. This is powerful evidence that customers are quite prepared to buy on price alone, with the assumption that quality will be acceptable; the suc-

The impact of no-name vendors on the market share of established players has been

cess of Compaq's low priced

considerable. In Europe and elsewhere International Data Corporation figures show IBM remains the market leader but its 19.1 per cent share by value

is far removed from the greater than 40 per cent share of the market it once held. Compaq and Olivetti at 7.4 per cent and 5 per cent respectively are not surprises, but the German no name vendor Vobis sells more machines in Germany than IBM, and has a 2.1 per cent share of the European market. Figures from the marketing consultancy InfoCorp suggest the European PC market will grow 10 per cent in units this

year but decline by 12 per cent in value, a clear indication of the move towards lower priced machines. All of which makes IBM's launch last month of a range of higher priced pre-mium machines for "power" users something of a gamble. Second. PCs will be portable. The industry has already created a new expression,

"nomadic computing", to

describe the latest in small. lightweight computers. The growth of the market for "notebook" PCs has been spectacular, but it is already diverging. At the upper end are conven-tional notebook computers weighing only a kilogramme or so; these have been made pos-sible by advances in disk drives as well as liquid crystal display technology. They use the same 32-bit chips as their desk-top counterparts and can do virtually everything the larger machines can do. With such power in a easy-to-carry

package, it is hard to justify using desk-top machines. There is, however, a need to link into office networks and manufacturers such as Compag are catering for this with fully wired desktop docking stations into which a portable computer can be clipped. Zenith has reduced the docking pod to a simple backplate, a forerunner, perhaps, of a time when computing power and information will be accessed through a wall socket.

range suggests, however, that the combination of a low price At the other end of the scale and recognised branding is are tiny computers which compress much of the functionality of a full scale computer into a package which will fit into a pocket. Hewlett Packard has Wednesday September 30 1992

puter which has Lotus 1-2-3, the most popular spreadsheet, already installed.

Psion, a UK-based manufacturer, is collaborating with Motorola, the world leader in cellular radio, to develop a handheld computer with an inbuilt radio modem.

The devices will be able to transmit data over public switched data networks, enabling, for example, a sales representative to maintain constant contact with head office.

Much of the excitement in nomadic computing, however, is focused on Apple's yet-to-be launched "Newton" personal digital assistant. The prototype is about 7 by 4 inches, a black plastic box with a acreen but no keyboard. Communication with Newton is via an electronic stylus, used to write on the screen. The idea is that the user scrawls notes, records appointments or draws dis-

grams. Newton automatically

orders and files the informa-

tion. Mr John Scully, Apple

chief executive believes the market for personal digital assistants will be enormous by the end of the century.

Somewhere between fullyfledged computer and pocket machine comes Olivetti's "Quaderno", an innovative cross between an electronic organiser and a notebook, complete with integral digital sound recording facility.

Third, PC marketing has become more important than technology. The PC did not evolve from the traditional

computer industry, but is a product of the semiconductor business. Early PCs had hundreds of silicon chips but integration is steadily reducing the number. Eventually, a PC may well comprise a single chip in a

plastic box.

It is hard for traditional manufacturers to add value to such a product. Intel, which dominates the market for the microprocessor chips used in IBM-compatible computers and Microsoft which makes the MS/ DOS operating system used in most of these machines, have won the lion's share of the market's gross profit, with everybody else fighting for the

This explains the diversity of low cost channels now used to distribute PCs. The list includes mail order, "off-thepage" (magazine) advertising,

and business superstores.

Although the PC has established itself as the centre of the computing galaxy, it is by no means certain which technologies will prove to be shooting stars and which will vanish into black holes. At a recent industry conference in Vienna, Mr Scott McNealy, the combative chief executive of Sun Microsystems, one of the fastpanies, picked his winners in processors, operating systems and distributed objects (a new programming technology).

Not surprisingly, Sun tech-nology was among the winners in each category along with intel and IBM in processors, IBM and Microsoft in operating systems and IBM, Apple and Microsoft in distributed objects. Apple's unique technology has a place of its own in Mr McNealy's firmament.

But he consigned to the dust-bin of computing history IBM's 3090 mainframe and AS400 processors along with Digital Equipment's VAX and Mips reduced instruction set processor. He was equally dismissive of operating systems such as IBM's mainframe MVS and VM and newcomers such as OSF/1

and Steve Jobs' NextStep. The industry is in such a state of ferment that the accuracy of Mr McNealy's predictions should be apparent within the next 12 months.

prices continuing to tumble

Composition of PC budgets

85 per cent by the end of 1993, representing a growth rate of

This growth has been led by users rather than computing people and has taken off with the emergence of increasingly powerful PCs, according to Mr Graeme Allan, technical marketing manager at network

market leader Novell "In the early days, users who had discovered PCs hit on the idea of networking for greater efficiency," Mr Allan says. "People were wandering around with a floppy disc looking for a spare printer or a

piece of applications software: networking enabled them to share printers and files.

"Since then network technology has become more mature and PCs have become more powerful with the move to the Intel 386 processor and now 486, so people have started looking beyond office automation applications to businesscritical systems.

"Meanwhile the computing department has recognised the has got involved in this movement, under pressure from the users, and is even giving it

This last point is supported by the Romtec survey, which shows that in 80 per cent of organisations, local area networks are now specified cen-

Romtec manager Mr Jon Whiteley says this reflects the fact that organisations now see that network growth has corporate implications.

However, the more advanced users are now at a crossroads The original network applica tions software such as elecestablished and are evolving into so-called groupware products which help people work together on documents or smeadsheets

But moving traditional critical business systems from the central mainframe to a PC network "seems like a colossal leap in the dark", as Novell's Mr Allan puts it. These systems have generally been developed by an organisation's computing department or are

The idea of downsizing from the mainframe is still mostly

just talk," Mr Allan says. "The reality is that there is still a inge vested interest in the traditional approach among IT departments, big computer manufacturers and major consultancies. In addition there is a shortage of expertise to carry it out."

The skills shortage has been highlighted by several recent studies as one of the biggest obstacles to the full exploitstion of networked computers. A survey by Andersen Con-

sulting on the related issue of client-server systems, in which applications are split across

networks concludes that "the skills shortage is the key issue". This was mentioned by over 90 per cent of organisations planning to move in this

A study by the West London Training and Enterprise Council (TEC) reveals an urgent need to retrain traditional computing people to fill the skills gaps in the fields of networking, user support and the Unix operating system.

Unix runs on computers of all sizes and is thus seen as having an important role in the move from mainframes to PC networks.

The definitions of analysts, programmers, operators and users are becoming less clear cut," says Mr Phil Blackburn, chlef executive of the West

London TEC. Traditional IT staff are being made redundant, yet companies seeking the new skills are already having recruitment problems.

We have the classic scenario for another round of IT skills shortages once the recession lifts" The fact that network growth has been led by users rather than computing departments has created the related problem of network management

The lack of central control was highlighted in a UK survey last year by network spe-cialist 3Com and Benchmark

Research. It showed that 82 per cent of companies used three or more data communication protocols, 59 per cent used two or more types of wiring and 31 per cent used two or more net-

A complementary study by The Networking Centre suggested that users were being especially affected by breakdowns in devices for connecting networks together.

Recessionary pressures and skills shortages are restricting the levels of support staff and as a result local area network managers are fire-fighting problems every day," says Mr Stuart Morrice, managing director of Peapod Distribution, which recently launched

'The growth of local area networks is limited by the avaliability of staff to support them?

a network management sys-

Mr Morrice adds: "The growth of local area networks is more limited by the availability of staff to support them than by the suppliers' ability to deliver the products."

The staffing issue will be met by training or poaching, as every computing specialist shortage has been dealt with in

Meanwhile products will become more reliable. Aiready PC manufacturers are building network facilities into their products, while the companies which supply them with microrocessors are putting network

inks in at chip level As the problems are resolved, the future looks bright for organisations which move business systems out to local networks.

Royal International, part of Royal insurance, switched its accounting and electronic mail from a Hewlett-Packard minicomputer to a PC network. It moved from an accounting package costing £120,000 a year to one bought for around 25,000 and from an electronic mail package costing £200,000 to a \$2,000 package bought off the

EBC Amro Asset Management has saved over £250,000 a year by moving from DEC Vax wide PC network which now runs all its systems.

With networked PCs, the hardware is cheaper, the software is cheaper, the maintenance is cheaper and as a result the financial risk is less," says Mr Allan at Novell 'In addition, systems can go live more quickly, which can mean extra benefits for the

DEC's Alpha chip, launched earlier this year, is the most advanced of its kind and the US group has set its sights on capturing a large slice of the European market for Riscbased machines. However, until the deel with Olivetti. DEC had no share of the fastgrowing European Risc marSun Microsystems with almost

But staying in business as a PC manufacturer in Europe these days is about more than having the right technology. As low-cost, high-volume clone makers monopolise the bottom end of the market, established manufacturers are having to differentiate their products, for example ICL with its emphasis on ergonomics and integrated networking soft-

They are also selectively expanding the variety of the distribution channels they use, sometimes to include direct sales and PC superstores as well as the established dealer networks. And they are taking a broader view of the market

as Rionex, which has grown into the biggest direct sales computer supplier in the UK in just six years, is now focusing on wider horizons. The North London-based company has followed Dell, Opus and other direct sellers and set up sales offices in Paris and Brussels and production facilities in France. Ms Sue Davis, general manager of the Paris Elonex office, says it is "essential" for any company that wants to be taken seriously as a European PC supplier "to set

ELONEXTRAORDINARY

PCs battle for shelf space

US PERSONAL computer industry executives talk less about technology these days. Instead of boasting about the 'speeds and feeds" of their latest products. they are more ready to discuss issues such as "brand merchandising" and "channel egmentation". With the advent of the "commodity" PC

market, in which there is little to differentiate one machine from another, the US PC industry has begun to take on many of the characteristics of consumer marketing. Just as manufacturers of breakfast cere-

s tussle over supermarket shelf space, PC makers are now vying with one another for positions in expanding and increasingly diversified distribution chan-

Similarly, "packaging" or "bundling" PCs into products designed to appeal to specific segments of the PC market has become an increasingly important competitive tool, with several of the top PC makers recently announcing revamped prod-

Sophisticated merchandising is widely

seen as the path that the industry must take to escape the debilitating price wars of the past two years, which have seen prices plummet by as much as 70 per cent. Today, 3865X-based desktop PC systems, complete with a colour monitor, hard and floppy disk drives, are widely available in the US for around \$1,000. Similar systems sold for about \$1,500 six months ago and

cost as much as \$3,500 in early 1991. The price wars were led initially by "clone" manufacturers, but over the past nine months industry stalwarts, including International Business Machines (IBM), Compaq Computer and Apple Computer, have struck back with drastic price cuts of their own, plunging the industry into a

frantic battle over market share. With profit margins now razor thin, several smaller PC makers have given up the ghost. However, it is traditional computer dealers who have paid the highest price in the PC price wars. Their role in the industry is being usurped by new PC sellers.

Computer "superstores", offering dis-count prices and a wide selection of equipment, have sprung up throughout the US. By year end there will be about 200 of these stores, according to industry esti-

PERSONAL

COMPUTERS

This year, computer superstores are expected to account for 12.3 per cent of the \$47bn-worth of PCs sold in the US, almost doubling their share of the market in 1991, according to Merrin Information Services, a California-based computer market research firm. By 1995 the researchers predict that computer superstores will sell over 23 per cent of PCs, with total US sales expected to reach \$78bn.

Electronics retailers are also becoming a

force in the PC market. Circuit City, one of the leading consumer electronics chains, touts PCs along with televisions, refrigerators and stereo equipment in its newspaper advertisements.

Office equipment stores are also rejoining the ranks of PC resellers, aiming to pick up sales to their small business customers. To reach home computer buyers, eading PC manufacturers are also placing their products in department stores.

"Direct fulfilment", via telephone orders, also represents a growing portion of the PC market. Following the lead of Dell Computer, which established itself as a serious contender in the PC market with telephone sales, most of the large US PC manufacturers have, or are preparing to, side-step the middle man and sell direct to

IBM's struggle to set its PC business back on course demonstrate the radical changes that are under way in the US PC market. The computer giant has established the IBM Personal Computer company as an independent business unit with the freedom to react as swiftly as neces-

"The days of "one size fits all" are long gone in the US personal computer market'

sary to rapidly changing market demands. IBM PC is in the process of establishing four distinct "brands" of PCs. in the US market these will be:

 the Premium brand, comprising existing and new PS/2 models aimed at IBM's traditional stronghold in the corporate computer sector. They will be sold by IBM value added dealers, as well as by the

company's own salesforce. ● IBM's soon to be announced "Value-Point" brand, a set of PC products aimed at the highly price sensitive segment of the PC market and sold through computer superstores and office equipment shops. IBM's PS/1 product line is being expanded and aimed more directly at consumers and small businesses. These will be sold

department stores.

The fourth "brand" group will be "mobile computers", aimed at the fast growing market for notebook and portable

through mass merchant retailers including

"Only a few years ago, we sold our PC products to what was largely a single group of buyers. They bought mainly through one of two channels - dealers and value added resellers.

"Today, there are multiple buyer types, or segments, all with distinct and different wants and needs, in terms of both product and distribution channel," explains Mr Sam Inman III, head of US PC marketing,

gone," in the US PC market, Mr Imman says. To make it today, we must have products targeted to different types of buy-ers who buy through sales channels like superstores, for example, that didn't even exist a few years ago."

IBM is not alone in recognising the increasing segmentation of the US PC market. Compaq Computer recently launched a new product line called Proli-nes, aimed at price sensitive buyers, and Dell has split its product range into three groups aimed at home buyers, small bustness buyers and corporate customers.

Similarly, Apple Computer recently introduced three new models of its Macintosh PCs, called Performs models, simed at home computer and small business users. The Performs products will be sold through department stores, office suppliers and consumer electronics outlets.

"We need to be where the customers are," said Mr Robert Puette, president of Apple USA, the company's domestic sales and marketing division. "Our goal with Performa is to reach new users and complement Apple's current

product and distribution strategy in the business arena," added Mr Keith Fox, Apple's vice-president of consumer mar-"Experienced computer users, business

users and those who require complex salu-tions will continue to rely on Apple's authorised reseller network for the largest selection of Macintosh solutions for a range of business needs," said Mr Fox.
Nonetheless, PC makers acknowledge

that there is bound to be some overlap among distribution channels, A small business proprietor, for example, might choose to visit a computer superstore or browse through the shelves of a consumeroriented electronics retailer. Corporate buyers are increasingly ordering PCs from superstores where prices are lower than those offered by value added resellers.

One danger of the multi-brand, multi-channel approach is that customers will become confused. Finding the best value for money when shopping for a PC is an ever more complex challenge given the bewildering array of features and performance criteria and now the different names attached to similar models from the same manufacturers.

There is no doubt, however, that by expanding their distribution channels and lowering prices US PC makers have created strong demand. In spite of rapidly declining prices. US PC sales revenues are expected to rise slightly this year,

#### PERSONAL COMPUTERS AND SOFTWARE 3

THE workstations is still one of the big-selling product families of the com-puter industry, generating good revenues for the suppliers in spite of the recession. But competition in the workstation marketplace is becoming as fierce as that

Sun Microsystems, generally accepted as the market leader, has seen its annual revenues grow from \$3.2bn in 1991 to \$3.6bn in the financial year that ended in June, while watching profits dip from \$190.3m last year to \$173.3m. At the same time, the number of units shipped reached record levels. - 56,000 during the company's last quarter.

These figures points to increasing price competition in the workstation marketplace, although Sun's President and CEO. Mr Scott McNealy, stresses instead a high spend on research and development as the cause of the profit decline.

The pressure on pricing and market development and growth is definitely on,

In the US, IBM has started a mail order service for its RS/6000 product family. In practice, this approach is aimed mainly at selling add-on products such as expansion

emory and extra disk capacity to exist ing users. However, although the company does not expect many customers to buy complete systems "off the page", the fact that this is possible demonstrates the way the workstation market has changed over

Hewlett Packard is also expanding its routes to market. It is adopting the technique aiready perfected by Sun and Mips Computers of licencing third party manufacturers. In HP's case, its latest agreement is with Korean-based Samsung, which is to start by selling a re-badged version of HP's Model 700 workstation. Samsung's semiconductor division is, however, already working on producing its own version of the system's Risc processor, and workstations of its own design are bound to follow.

Unix-based workstations are finding their level in the overall spectrum of computing. They are still the best solution to a number of different tasks, especially those such as computer-aided design where high resolution graphics and the ability to run a number of different applications on a desktop system are important.
In most situations where these capabiliWORKSTATIONS

# Figures point to new pressures

ties are required there is also a need to network several workstations together. To do this, the same hardware architectures of the leading workstations are now important in the role of network file servers and ties of Unix to run multi-tasked applications within a virtual memory environment - while fully exploiting the power of the processors - is proving an important lever for many users, particularly in the financial community.

One of the biggest developments in the workstation marketplace, however, is in the user interface to the system. The Unix operating system used in workstations is.

to the uninitiated, complex to use Over the past year, however, this complexity has largely been eradicated by the widespread adoption of Graphical User interfaces (GUIs) as the standard working environment. This means that anyone with some experience of using either an Apple Macintosh or a PC-compatible with

Windows 3, is now equally experienced at using a Unix workstation. There are two main contenders for the title of "standard" GUI for this market. One, Open Look, has Sun Microsystems as its prime supporter. The company ships this GUI with every workstation it sells,

making it numerically the dominant sys-

tem. The Open Look GUI is a Sun development, and is promoted by Unix Interna-tional (UI), the Unix industry grouping of which Sun is an important member.

Open Look is, however, only prevalent on Sun systems and on those from companies that use the Sun-developed Sparc Risc processor and associated operating systems, SunOS or Solaris. The GUI that is proving the most popular with manufac-turers is Motif, promoted by the rival industry grouping to UI, the Open Soft-ware Foundation (OSF).

The most popular implementation of the OSF-Motif style guide comes from Cambridge-based IXI. Its X-Desktop system has been licensed by most workstation suppli-ers, including IBM, Bull, NCR, Data General, ICL, Unisys and Olivetti.

Not only is there increasing price competition in the workstation market for the dominant suppliers, Sun Microsystems, IBM and Hewlett-Packard, there is also growing competition on the technology front. Digital Equipment, in particular, has started to ship the first workstations built around its new Alpha Chip processor which, at an operating speed of 200 Million Instructions Per Second (Mips), is the fast-

est processor available in this market The performance of the Intel-based PC is also rising sharply. The company is now scheduled to introduce its next processor, known as the P5, early in the new year and this will produce PCs capable of running at up to 100 Mips. This will be fast enough to cope with many of the applications for which a workstation is currently

the only practical solution.

Also needed, is an operating system that can exploit such potential power. Microsoft's combination for Intel-based PCs, MS DOS and Windows, does not offer sufficient functionality, particularly in multitasking, and users have the choice of either OS/2 from IBM, or one of the PC-based implementations of Unix.

Microsoft hopes to rectify this next year when "industry-strength" versions of its new operating system, NT, are launched. The combination of P5-based PCs and the NT operating system could at last see the PC challenging workstations in terms of functionality and performance. If this happens, current workstation suppliers could be in for a difficult time.

Martin Banks

The handheld market is characterised by a confusion of names

### Distinctions begin to blur

CLASSIFICATION of handheld computers seems almost as difficult as that of Darwin's beetles. Some differentiate between handhelds and portables, on the grounds that portables may be held by the hand but genuine handhelds are held in the hand. Certainly, as prices for these machines range from £60 to 66,000, there must be several different species involved.

Portable computers started to appear in the early 1980s. and soon branched into two palmtops, consumer electronics products such as sophisticated pocket calculators and notebooks, business equipment for the travelling man-

But this distinction is shaky and these two lines could your converge again.

Palutops include, or overlap with, personal organisers and personal digital assistants. Notebooks can be divided by size into laptops, true notebooks and anbnotshooks.

The confusion of names shows how young the market is. Even in the US market research on the subject is still thin and in Europe even thin-

for desktop computers, even though the price of the ministurised systems is higher.

lyst at IDC, says the palmtophandheld sector more than doubled in the US between 1990 and 1992 to 670,000 units, or \$242m of shipments, at an average price of \$360.

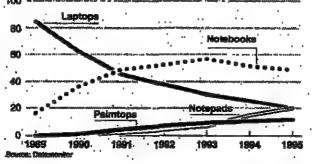

In the US, the Japanese company Sharp is the dominant supplier of palmtops. In the UK it claims to have half of the market for organisers priced between £60 and £260. It puts the current market at 350,000 units and forecasts growth to 450,000 in the next two years.

The UK company Paion is a big vendor in Britain but its small size means it will struggle to maintain its position in the global market.

The recent entry of Hew-lett-Packard into this sector with its HP95LX, priced at around £350 and compatible with the industry standard PC operating system DOS, has created a stir and is expected to lead to a spate of clones from the Pacific countries.

Apple has put its reputation at stake with a big publicity campaign for its forthcoming The market for portables is Newton machine, to be manu-growing much faster than that factured by Sharp and due to

Portable computer market, Europe 100

be introduced in the US early next year at a price probably lower than £400.

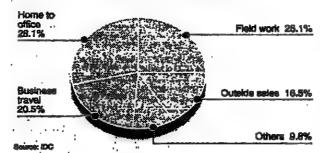

It will run on the British-dedgned Advanced Risc Machine (Arm) 610 chip. Described as a notepad rather than a notebook, it will not have a keyboard or a mouse - input will be by a pen. It will provide one of the first tests for the concept of pen-based computing, which is seen as the future medium for many form-filling

Apple's claims that the machine will learn to recognise the owner's handwriting in tost an hour and that frings versions will also be able to recognise speech have met some scepticism in the industry. It risks a strong adverse reaction if it fails to deliver what has been promise

Apple will be challenged by an alliance of Taudy and Casio, Olivetti's Quaderno, and no doubt many others. But some leading manufacturers believe the technology is still not mature and have decided to wait for it to develop further before enter-

The paimtops sector is one of the few in the industry where prices are rising, as more functions are added. But given their low price they

should be selling better, says Mr Stephen of IDC.

"They are too complex and have too many buttons. Many people have been put theirs away," he says. Palmtons remain unstandar-

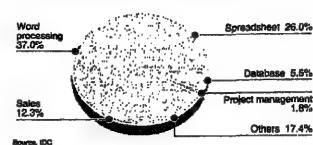

dised and the question of what standards are needed if any is being debated. Sharp and Apple have both adopted proprietary designs.
Ms Rosemary Eccles, Sharp's

UK product manager, argues

that users want simplicity

above all, so there is no likelihood that personal organisers will evolve towards more complex PC-based standards. However, other vendors think that users will prefer systems which are compatible

with desktop PC standards including DOS. The notebook sector larger machines, but still able to be carried in a briefcase is growing even fester. It trebled in worldwide sales to

Primary usage of portable PCs

the UK sales shot up to around around 30 per cent of the 90,000 last year. Some experts are forecasting 300,000 sold in world market for notebooks and larger handhelds, says they are now starting to replace desktop PCs for many functions and sales will overwith those of desktop personal take those of desktop PCs in the mid-1990s.

The storage medium for these machines remains an issue. Reducing the power needed for memory is impor-tant because their batteries tend to run out after a few

Intel claims that its new "flash" solid state memory erasable chips will use less power and be cheaper, faster and lighter than rotating hard disk drives.

that. They usually conform to It says flash memory will on Intel 386 or 486 32-bit replace hard disks in hardheld chips, with a DOS operating computers in the next couple system, Windows user interof years. Apple's Newton will ce, 2-4 megabytes of RAM, use flash memory on cards the size of bank credit cards. But 40-120 megabytes of hard disk some experts dispute Intel's claims and argue that very Mr Mike Lunch, UK director of PCs for Toshiba, which has small hard drives will prove

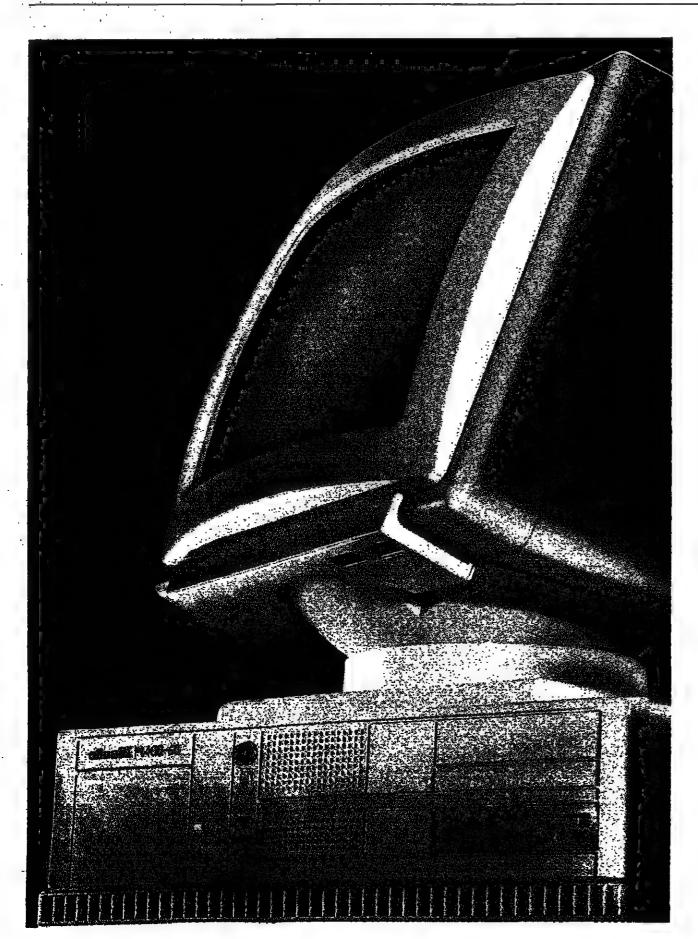

more successful.

Wireless communications is another area of controversy. The popularity of these new devices will depend heavily on the ability to send faxes. exchange electronic mail messages, receive news by satellite and send data back to head office. Until suitable communications standards emerge it remains uncertain how effective these functions will be.

Paintops and notebooks are to a great extent creating a new market of users who have not had PCs before, such as sales people, financial services representatives and the gen-

As palmtops become more expensive and notebooks become cheaper, the two subsectors may before long come together again. That development would probably bring even tougher competition in

Tangent, a software house and pen computer specialist, one of only a handful in the pen computing arena, has been working on techniques for collecting physical numerical data for four years, ever since it evolved as an industrial consultancy from the Loughborough University of Technology.

But like others in the data logging and collection sphere. Tangent sees its work with rugged Husky portables and with Psion Organisers as little more than history now. Its work on the Freestyle pen

computing projects, the exploratory development of industrial pen computing, sponsored in part by the Department of Trade and Industry, points the

machine from EO Europe of Cambridge.

IRM is also interested in the technology, so watch for offerings from that camp, too, and from Apple, whose Newton sys-tem is due to be launched in Spring 1993 at less than \$1,000. What Apple envisages is computers from wristwatch to whiteboard-size, so it needs con-sumer electronics know-how to crack those markets.

With this in mind, it becomes clear why Apple has licensed Newton technology to both Sharp Electronics and Toshiba. It has also approached other Japanese consumer electronics companies looking for buyers. Expect Sony to be on the shortlist, for its strengths in screen technology and Walkman marketing. With a band of hardware vendors of this calibre offering

from £1,100 to £2,500 in the UK, buyers can soon expect power performance enhancements, increasing disc size and rapid improvements in screen technology. Colour screens and higher resolution should also become widely available.

Software standards, too, will remain flexible for a while. Outside the Newton environment two contenders exist for a standard operating system: Microsoft's Windows for Pen Computing, with support from more than 120 software vendors including Borland and Corel, and PenPoint from GO Corporation.

But the debate is not simple: IBM is working on a version of the OS/2 operating system for pen environ ments.

So the pen market is going to be vendor-driven for some time and it is here that the biggest questions arise. Market earch figures, for instance, and vendor estimates of sales vary enormously, but they tend to be high. One report suggests that 4m pen comput-ers will have shipped by 1995. Compare this with GridPad's sales in 1991-92, which were estimated at around 40,000 units by Dream IT, a US market research firm.

"The whole pen market has been bedevilled by hype and over-hype," says Mr Billson of Tangent. "Excessive predictions were made on sales and

While Mr Billson attributes this in part to a lack of choice for developers and buyers. there are other issues, he says. "Apple. for example, has announced Newton. They've announced release dates and so on, but who knows whether they're doing that to create an element of FUD - fear, uncertainty and doubt - in the mar ket." Fear in the market may restrain buyers and developers from committing heavily to other products, he says.

Apple, however, stands by its position and the predictions for the market that Mr John Sculley made cartier this year. The market will be worth \$3,000bnby the turn of the century, he said.

This might seem a surprise," says Mr Ajaz Ahmod for Apple UK, "but the figures are based on Apple surveys which show that computers and communications products are going to merge. And the merger between them is going to be the Personal Digital Assistant, or Newton.

And the reasons Apple announced Newton in May of this year? "Simply to help developers generate products for the environment and to reduce the volume of speculation about what we were

doing," he says. So the debate about the viability of the market will continue. What is clear, though, is that the technology for pen computing does exist. "It's not vapour-ware," says Apple's Mr Ahmed. The only hurdle, therefore, seems to be the application itself and whether sceptical buyers see a real usc for these systems in the workplace. Don't write off the key-

for between \$1,250 and \$2,900

in the US. It seems likely, how-

IN 1992 the computer industry's 'Big Myth' - that powerful computers are technical marvels which demand high prices - was finally laid to

A year ago, the cheapest notebook computer based on the best-selling Intel 80/386 microprocessor chip and manufactured by Compaq, the mar-ket leader in high performance personal computers, cost £2,775 in the UK. Today, Compaq's cheapest 80/386 based notebook, the Contura 3/20, costs only £995, one of the most dramatic examples of the way prices have collapsed over the past few years. PC prices have been falling

by an average of between 25 and 40 per cent a year and there is no reason to suppose they have reached the bottom. In few industries have high priced, high technology prodacts become commodity items in such a short time. It is causing serious problems for established manufacturers and creating havor in the supplier channels, where margins have been shaved unbearably thin.

Computer dealers can survive now only if they sell hardware in large volumes or if they can add extra value in the form of software and ser-

The recession apart, prices have fallen because of declining component prices which have lowered entry barriers to the industry and helped to stimulate intense competition. A year ago, for example, a

Declining prices create havoc for industry icroprocessor, the workhorse of the industry, cost \$88 in 1.000-part lots; now the same chip costs only \$57.50 in the same quantity. Pressure on

microprocessor pricing is helped by competition from a number of semiconductor manufacturers, notably AMD and Cyrix, which are developing chips functionally identical to Intel's industry standard devices. Some suppliers are

Some suppliers are prepared to accept smaller profit margins than is customary

also prepared to accept much smaller profit margins than is customary in the computer

Manufacturers traditionally expect a 60 per cent gross profit margin on mainframes, 40 per cent on mid-range systems and 20 per cent on PCs. Automated manufacturing techniques and more economic channels of distribution are allowing some manufacturers to work on much

tighter margins.

Many are based in Asia and constitute the biggest chunk of

called "no name" segment, which according to the consultancy InfoCorp Europe may now be greater than 30 per cent of the total. Growth in this segment of the market is greater than elsewhere in the PC business which is why no manufacturer can afford to ignore it. Across Europe it is expanding at 45 per cent a

year as opposed to 21 per cent for the whole PC market. Deli Computer, a cione maker based in the US broke the mould by ploneering direct sales in the West through mail order. Compaq was one of the first victims. A year ago it reported its first ever loss after taking a \$135m restructuring charge to pay for 1700 redundancies.

Under new chief executive Mr Eckhard Pfeiffer, the company changed tack decisively. It cut prices, sought manufacturing economies and announced a new range of low cost products. Compaq's chal-lenge was to maintain its quality image with products cheap enough to compete in the lower regions of the market. It seems to be succeeding. In

July it reported a 43 per cent jump in second quarter income, the first year to year improvement in Compaq's Machines (IBM), the world earnings since the beginning

It also warned that it was suffering from a parts short-age because of the popularity of its new machines. In some cases it has lost orders as a result. Warned there would be a two worth wait for Compag Prolinea computers, a customer beught extensive numbers of a "no-name" brand.

Deil, meanwhile, is prosper ing. Its quarterly results, published last month, show a year on year growth of 129 per cent and net profits up 77 per cent. It has \$122m in cash and operating costs of only 16 per cent

International Business

MULTI-MEDIA has been a

buzzword in the personal com-

puter industry for almost five years, yet few mainstream PC

applications have been pro-

duced using this innovative

technology - that is, until

There are good reasons for

this - the computer hardware which provided the power and

function necessary to ade

quately run multi-media appli-

cations (combining speech,

music, graphics, animation and

still pictures) was expensive

and multi-media development standards not firmly fixed.

But now that PCs are cane-

ble of producing digital sound - and use CD-ROMs (Compact

Disc - Read Only Memory) to

read data and display high-res-

olution colour images, anima-

tion, sound and speech -

multi-media systems are

starting to become lower-cost

In fact, manufacturers in the

US have made moves in recent

weeks to make multi-media

computer hardware even less

expensive. Zenith Data

have both announced plans to produce "multi-media players"

based around Tandy's new

Video Information System

standard - which allows

multi-media software based on

Microsoft's Windows system to

be played through standard US television sets.

Meanwhile Apple Computer, one of the pioneers of the multi-media market, has also

announced new systems in the

US that also make it cheaper to use multi-media technology

with its Apple Macintosh

range. There are probably

leader in PCs, is taking a diversity of approaches. In Europe, for example, it has established a wholly owned. subsidiary, Individual Computer Products International (ICPI) to take on the no-name manufacturers directly.

The company will source products on the open market. selling them through a variety of channels - dealers, retailers and direct sales. The name of the products - Ambra - gives no clue to their parentage. IBM is clearly trying to carve out a share of the low-end market for itself without compromising its credibility as a quality manufacturer.

Eartier this month, the com-

ting off its PC operations as a separate business within the corporation. The new unit, the IBM Personal Computer Company, will have responsibility for developing, manufacturing, distributing and marketing the company's entire range

of PCs. The idea is to give the unit more freedom in setting budgets, sourcing components and

The first products from thenew division, three models in IBM's entry level PS/1 range; were launched earlier this

The rush for the lower ground has even enveloped Apple, which has ploughed its own farrow through the computer industry since its early days. The company, which traditionally charged premium prices for its easy-to-use Macintosh technology, introduced cheaper versions last year and

Price reductions and new low cost models continue to come thick and fast

earlier this month introduced a new line of low-cost machines that it will sell

through mass-market retail-

Models in the new range, known as Performa, will seil

ever, that selling the new. range through retailers will cause conflict with Apple's traditional dealers who will have to compete against the new machines with more expensive Macintosh products. Price reductions and new low cost models continue to come thick and fast. Digital

Equipment, hitherto an also ran in the PC stakes, has launched a 386SX computer with colour screen for £850.

How much further can prices decline? Few would give hostages to fortune by hazarding a guess in such a volatile industry, but at least 20 per cent seems likely next year. The principal effect of the past year, according to InfoCorp, however, is to narrow the average system, price differential between a first tier vendor

- Compaq or IRM, say, and the no-name third tier suppliers from 1000 to £100.

insight into the future of this technology. At a recent brief-ing to US financial analysts',

he talked about a multi-media product he hopes will help

move Microsoft to the centre

stage of the consumer electron-

ics market,

MULTI-MEDIA

# Clicking on Bogart

Windows software, no longer means scrambling around to uals - and then spending another 10 minutes wishing that there was somebody around to actually demonstrate

how to solve the problem. Multi-media technology, allows users to lock up their program manuals in a vault and means they should never have to look at them again. For take the user through any problems, step by step.

In all, there are 42 lessons in the Microsoft Works on-line tutorial - each of which has associated overviews comprising multi-media movies and mation. It is typical of the kind of work that is being done in the multi-media sphere to

soft's integrated Works for and playback any audio or video sequences they want to see again. This is all part of showing people how to use PCs

> application on an IBM-compatible PC is somewhat longer than the average MS-DOS version 3.1 is needed or, later, Microsoft's CD-ROM extensions version 22 or later, a PC with a 16Mhz 386SX processor (although some sound and animachines sold by some manufacturers) and Version 3.1 of Microsoft Windows (although most are still able to operate using Windows 3.0 with Multi-

In addition to all this, 2Mb or memory of system memory is needed (4Mb is recommended), at least 30Mb of hard disk space, a CD-ROM with an access time of less than one second and a 150K per second data transfer rate. Needless to say, a VGA display adaptor is a board with speakers or head-

It already includes animated "talking books" for children, encyclopedias, dictionaries, an atlas (which not only shows maps and flags of the world. but also plays the anthems of most countries). "biographies"

It is a CD-based film guide for cinema buffs. Entitled "Cinemania", it is a guide to anything and everything you might want to know about movies. It includes a powerful database "search engine" with text information on more than 19,000 films - as well as lots of digitised pictures and sound clips from films.

If, for example, someone wanted to know all the films that Humphrey Bogart starred in during the Second World War that won an Academy award, he or she would just enter that criteria on a form screen that looks like a VCR remote controller.

with the answer "Casablanca" and offers the user a huge variety of other information. It is possible to see a review of the film, an article about the making of it and obtain information on any of the leading actors, the director or the studio which produced it.

By clicking on Bogart's name, for example, the user is offered a complete biography of him, featuring pictures, sound samples of him taken from various films and lists of all the films he has ever starred in. And that, as the man says, could be the begin-ning of a beautiful friendship.

# Why pay for less than a Compaq when you can *now* pay less for a Compaq?

\*Prices include CPU and Keyboard. Monitor not included.

Until today your choice has been pretty simple. You could buy a Compaq and know you were getting quality. Or you might settle for less and take a risk with another make of computer.

Now we'd like to make sure that you never again have to compromise.

You see, for 18 months we've been talking to people like you to find out exactly what you want from a computer.

Some said that, quite frankly, they didn't need "feature-rich" technology. What they want is a more functional Compaq at a somewhat friendlier price.

Others demanded innovation. And they were willing to wait until the perfect performer appeared on the market.

With all this in mind, we spent \$197,000,000 on R&D last year in an all out effort to give you precisely what you want.

So now there's a Compaq notebook PC and desktop PC to suit every price range and every purpose.

### The new high power, low cost notebook PCs.

At just 6.2lbs and £995, the new COMPAQ Contura 5/20 is in a class of its own. You have over 5 hours continuous power which, thanks to the latest 586 SL microprocessor, you can easily extend by choosing your level of power conservation.

You'll also find the system is simple to use, with pre-installed MS-DOSo 5.0, large screen and keyboard, plus pop-up hot keys for quick access to frequently used functions.

What's more, for easy handling, there's even a sleek and specially contoured case – making it the most stylish and sophisticated notebook at this price.

### The world's most advanced colour notebook.

If you're looking for the most advanced notebook PC, the new COMPAQ LTE Lite/25c is everything you could wish for. Open up this dream machine and there's a stunning Thin Film Transistor display giving you a vivid palette of over 4,000 colours.

To enable you to effortlessly navigate your beautifully displayed applications we've also built in an Easy Point Trackball mouse.

While you are working, you have up to 4 hours battery life. And back in your office, you have instant

desktop expansion capability via an optional Expansion Base.

Which brings us, quite neatly, to our new desktop PCs.

#### A desktop PC for your pocket.

If you don't need a feature-rich desktop, why pay for functions you won't use? Simply select from our COMPAQ ProLinea family of personal computers.

As a networked or stand-alone PC workstation the COMPAQ ProLinea 3/25zs is suitable for simple word processing, spreadsheets, database applications and electronic mail.

MS-DOS. 5.0 comes pre-installed. And with high resolution video controllers you'll get a vastly improved performance from your graphics based applications. Indeed, you've all the performance you'd expect from Compaq – at a price that may well surprise you.

# A highly advanced desktop at a down to earth price.

When you need more than the basics but you're still mindful of your budget, we'd suggest the COMPAQ DESKPRO 3/25i, a new addition to our DESKPRO family.

No other make of computer offers so many upgrade options at such low cost. Nor will you find such advanced technology at such affordable prices.

With QVision graphics you get a remarkable range of acceleration features plus incredible clarity from flicker-free resolutions of up to 1024 x 768. And, with the unique Compaq Business Audio facility, you can add voice messages to explain text or illustrations, and even set your presentations to music.

All this means you're fully equipped for the widest range of business tasks and ready to flourish in a Windows environment.

#### The ultimate Windows machine.

If you're intent on getting maximum performance and productivity from your Windows software, the new COMPAQ DESKPRO/M Windows...

Edition has been custom-built for you.

With a palette of over 65,000 colours at a 1024 x 768 resolution you have near photo realistic visuals. Moreover, you've a huge display area giving ample room for multiple Windows applications.

You can further exploit innovations in Microsoft

Windows

3.1 with Compaq Business Audio. And

Prices exclusive of VAT at 17.5%. Product names mentioned here may be trademarks and/or registered trademarks of other companies © 1992 Compaq Companier Corporation. All rights reserved MS-DOSs 5.0 and Windows are trademarks of Microsoft Corporation. We have quoted Typical Buying Prices to give you an indication of the typical retail price you will pay for COMPAQ products, I please be aware these prices do not represent Suggested Retail Prices. Your Compaq Authorised Reseller will be able to provide you with the actual price you will pay for your specific requirement

with Compaq Intelligent Modularity you can upgrade graphics, memory, processor and storage as the latest technology becomes available.

Naturally the COMPAQ DESKPRO/M Windows™ Edition comes with MS-DOS® 5.0 and Microsoft® Windows™ 3.1 pre-loaded onto the fixed drive. So, just turn on and you're off and running with the ultimate Windows machine.

#### Compaq Quality Guaranteed.

We began by saying we'd been listening to our customers. One comment we heard time and again was this: "don't compromise on quality."

Rest assured, each new machine is 100% Compaq designed, tested and engineered. In fact, we simply told 1,200 of the world's best engineers to continue making the most reliable and compatible computers, but to add one other feature: affordability.

We believe this is what you want. But only you can say if we've achieved our aim. So we'd like to tell you more about our new ranges of notebook PCs and desktop PCs.

Please either phone the number or complete and return the coupon to: Compaq Computer Ltd., FREEPOST, 19 Worple Road, London SW19 4YY.

You'll find that now you don't have to pay more if you won't settle for less than a Compaq.

#### PERSONAL COMPUTERS AND SOFTWARE 6

HAVING provided PC users with a 30-fold increase in performance coupled to a near four-fold drop in system price, there can be no doubting the significance of the semiconductor industry, and in particular

its most important product, the

Much of this development also came without the usual pressures of direct and frantic competition. For the past 10 years, and more in the PC market, there have been two main microprocessor "camps" -Intel and Motorola - and while there has been technological rivalry between the two, they rarely competed for Intel had the IBM-compatible PC market to itself, while Motorola supplied Apple and many of the early small Unix

Later came the Reduced Instruction Set Computer (Risc) processors from the likes of Sun Microsystems, Mips Computers, Hewlett Packard, Motorola and IBM. As they all are pitched at the same basic market - Unix systems of all types - this has been an area of greater competition and in-flighting between the manufac-

In the PC market, however the past couple of years has seen competition increase radically, particularly in Intel's prime marketplace of the IBMcompatible PC. Until that time.

COMPUTER distribution channels today are probably more confused than at any point since they were set up in

the early 1980s. The sedate "manufacturer to distributor to dealer to customer" tiered distribution model has been modified and flattened as channels matured. but in the past two years numerous spanners have been

Where two years ago dealers and distributors could talk about channels evolving in an orderly fashion, the developments of the past few months in particular suggest that many parts of the channel have in fact been shattered. and rather than evolving, are being rebuilt from the ground

Historically, the quests for economies of scale and critical mass have led to a series of acquisitions and mergers, where, for example, British distributors Frontline and Software were acquired by German company Computer 2000 and

Martin Banks finds increased competition may lead to superior processors but reduce suppliers

Intel had managed to defend its technological lead by judicious use of legal protection and licencing deals for its x86 processor family.

The company would licence the low-end, high-volume products to other manufacturers, while maintaining total control over the high-end products. This was until one of the licensees, Advanced Micro Devices (AMD) claimed breech of an on-going licence agree-ment, the claimed breech preventing AMD having any

rights to Intel's 386 processor. The judgement was sufficiently complex to allow both companies to claim victory, but the clear result in the marketplace was to allow AMD to produce its own version of the 386. The effect was to break Intel's stranglehold on this market, which at the time was the dominant part of intel's processor busine

It also opened the floodgates for other manufacturers to move in and offer PC produc-ers other alternatives to Intel stakes both for Intel and its rivals are high.

The risks are also high. One of Intel's competitors has been a US company, Chips and Technologies, which after a year of producing its own versions of the 386 processor has decided to all but pull out of the business. It will continue to market one version, mod-elled on the original Intel part (known as the 386DX), but has withdrawn all bar its PC/CHIP, a single-chip implementation of a complete low-performance PC, which is aimed at the notebook and palmtop PC produc-

Intel still faces strong competition, however. AMD chief executive, Mr Jerry Sanders, is claiming some 30 per cent of the 386 market, and has products in all three versions of the processor, these the standard 386DX, the cheaper 386SX with reduced memory addressing capabilities and the 386SL, which uses an internal design to effectively allow the processor to stop when not in use. Called a "static" design, it reduces power consumption, which is advantageous in note-

main competitors, Cyrix and IBM. AMD is pushing 386 processor technology aggressively, producing devices that are faster and cheaper than Intel's. The latter, having already introduced the faster, more powerful 486DX as the next processor in the family line, has responded to the competition in a number of ways.

It started with the launched of the 486SX version, seen by crude marketing gambit. This is essentially a 486DX with the on-board maths co-processor disabled. The additional matha co-processor is essentially a 486DX designed not to work unless the 486SX is already

It has subsequently launched the 486DX2, which runs internally at twice the speed of the original device, and the Oversion of the DX2 chip which can be fitted into the co-processor socket of existing 486-based

This latter device has been heavily criticised by many PC makers, who suggest that with it Intel is competing with its

Price

Together with the other own customers - them. The company is certainly starting to court the end user directly by trying to establish the Intel brand name with them. It is also producing complete PC motherboards and other sub-

> directly by making its own Intel has also delayed the

systems. It contends, however,

that it will not compete

The winners will be the processors which run operating systems that users decide are best

introduction of its next generation processor, called the P5. This is at least in part to give more time for the DX2 and Overdrive products to flourish, but when it finally appears next year, it will bring Intel into direct competition with the makers of high performance Risc processors,

Its 100 Mips will, for example, equal or beat the performance of devices such as the SuperSPARC chipset at the heart of Sun Microsystems' workstations, Mips Computers R4000 device which was to be at the heart of the now defunct ACE workstation collaboration (the coming of the P5 was the main reason companies such as Cumpaq pulied out of the Alliance), and the PowerOpen rocessor due to roll out of the IBM/Apple/Motorola Alliance by the end of this year.

The comparability in brute performance expected between the coming P5 and the Risc chips will inevitably weaken the dividing line between PCs and workstations, quite possibly creating a situation where the winners will be those processors which run the operating systems which users decide are best, rather than the best technical" design.

The one outsider in this at present is Digital Equipment, which has already announced a Risc processor, called Alpha This has a claimed perfor mance, 200 Mips, that is farbeyond anything else available. Digital aims to not only use it in its own workstations, but also offer the processor on the merchant market as direct competition to the likes of

Competition in the chip market is, therefore, on the verge of becoming flerce, with the extending recession meeting rapidly advancing technology head-on. The result is likely to be far superior processors, but far fewer sources of supply.

The channels for computer distribution are becoming increasingly confused, writes John Lettice

# Dealers dogged by spanners in the works

American combine Ingram

respectively.
This in itself threatened the smaller distributors, as the larger companies quite reasonably view their most effective route to market as being to maximise volume and effi-ciency, and to win on margin. The other historical trend

has been towards dealer-distributor status, where a dealer chain, such as Computacenter, grows large enough to be able to deal direct with the manufacturer at more advantageous margins, while selling direct to large corporate customers at prices that smaller dealers can't match.

The view - widespread in the City two years ago - that distribution needed a direct sales arm to survive, has now

Nevertheless, it is clear that the use of direct sales provide distributors with access to price-sensitive sectors of the market that the traditional distributors have trouble in addressing, and still pose some difficult questions for trade-

The main problem for the trade now is more finance than margin erosion'

only distributors.

Mr Chip Lacey, president of Ingram, takes the view that in order to succeed in distribution you have to be in the top one or two in the markets in which you operate, but he qualifles

this by broadening the area to now is more finance than marcover specialist sectors as well as geographical territories.

for supplies of 386 processors

This is an important market, for the 32-bit, Complex Instruc-

tion Set Computer (Cisc) 386

processor is, in its three prime

nearly all entry-level PCs, systems which sell worldwide

by the million. It is the domi-

nant processor type in a mar-ket where Intel alone claims to

have shipped 20m processors of

all types past year, holding a

58 per cent share of the \$5.2bn

microprocessor business. With

profits last year of \$818.6m, the

versions, now at the heart of

Ingram, as a broad-based distributor, needs to come first or second by volume in each country, "but for example you could be one of the top two printer distributors in a given In the UK Northamber,

which has historically been spoken of as both a target for Ingram and - being trade-only as one of the companies that will have most difficulty sur-viving the rise of the dealerdistributor, but Mr Lacey clearly thinks that its solid base in printers is enough to see it through.

In the view of Northamber chairman Mr David Phillips, the main problem for the trade

gin erosion. Computer dealers are being hurt by banks tightening up on overdrafts, and he suspects that the banks' motivation in providing credit ratings these days is all too often to shift the debt from the bank to the computer distributor.

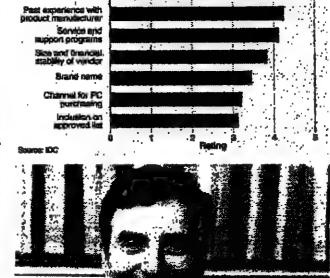

"Dealers meed three distribu tors - one to love, one to hate and one to go to when you're on credit hold," he says, and in his view, given the parlous state of European credit insurance, distributors are now largely on their own when it comes to assessing the risks of doing business with particular

The most recent, and for the trade the most ominous, development in distribution channels is the trend for the manufacturers themselves to take control of the distribution

This is partially a response to direct-sell specialists such as Dell, and partially to the host of followers, small assembly operations which have taken market by selling computers directly off the page and over Karlier this year the head of

IBM's personal computer divi-sion (recently floated off as the IBM Personal Computer Com-pany) Mr Jim Cannavino said IBM would be present in all channels, and this has culminated in a series of initiatives that constitute varying degrees of threat to traditional chan-

Europe as a test market for new approaches to channels

User ratings for hardware supplier features

that have been, or shortly will be, applied to the rest of the

In the UK the first stage was the establishment of the PS/1 entry-level IBM brand through mass-merchandisers such as Dixons, and more recently through superstores, and this was followed up by the launch

of the Ambra brand, an IBM clone built by Singapore manufacturer Wearnes, and sold by a separate company owned by IBM. ICPL into the areas of the market that IBM had lost to the clones.

The success of Ambre has been compared unfavourably to that of Compaq's low-cost

range (the theory for this was based on research of BMW's launch of the 3-series), but IBM has plenty more shots in its

It is expected later this month to launch a series of souped-up PS/is and another line of low-cost ciones (this time built by the Korean company Samsung), along with a full-blown telesales operation.

Mr Howard Ford, head of the company's UK personal systems division, stresses that the indirect channel remains IBM's "primary route to market", but IBM's efforts to recoup business lost to the indirect channel will not in themselves help shore up that

The challengs for the indirect channel remains to "get big, get niche, or get out", and any company without either an area of specialisation or sufficient mass to benefit from economies of scale is threat-

"The guys who are in tronble", says Ingram's Mr Lacey, 'are the ones who haven't yet

'As soon as growth stope, we'll begin to see fallures in the second tier

cked a specialisation". And nterestingly enough, Mr Lacey feels one of the areas most likely to see problems is the

US, not Europe.
The US channels have historically seen 20 per cent annual growth, "and that's what's been keeping smaller distribu-tors around," he says.

"As soon as growth stops we'll begin to see failures in the second tier". Adjusting to lack of growth is one of the few problems the UK market does

PROFILE: ASK

# PCs move into management

place in manufacturing over the past 15 years - with mini-computer-based Manufacture Resource Planning (MRP) software products being one of the uards of this change.

But now change has come to the revolution. Smaller desktop personal computers are starting to take on the management of big manufacturing systems in ways that tradi-tional MRP software suppliers and even PC hardware comnanies – considered impossible only a few years ago.

One of the best examples of this change lies at Compaq's European manufacturing plant at Erskine, Scotland. When it built the factory in the late 1980s, even PC manufacturing high-filer Compaq could not risk trying to run its MRP system on Compaq PCs and instead installed US software group ASKs MANMAN manufacturing business management software on a Hewlett-Packard minicomputer at

Although Compaq would have dearly loved to run the manufacturing process for its PCs using its own PC products, the company was realistic enough to know that this was not possible with the technology available at the time. This month, however, Compaq will start looking at a new ASK product - known as MAN-MAN/X - that will run on Compaq PCs that use the Unix operating system.

The acronymns are not important here - the issue is that MRP systems are soon to be able to be offered on the

kinds of small systems that even modest manufacturing operations are able to afford. ASK also predicts these systems will have to be much more tightly integrated to manufacturing processes and

planning in the future. According to ASK marketing manager Mr Paul Eggleton, a wider appreciation of manufacturing software issues cannot come too soon. "Historically, manufacturing information addressing the needs of a single facility or a particular func-

entity across the entire corporation - not as a collection of business functions, products and facilities. For example, this will enable a car manufacturer to switch its sourcing and supply of parts, and location of end unit production, dependent on current geographic market

to manage the data as a single

ASK designs, develops, man-ufactures and markets a number of integrated management information systems for manu-

There is a growing need for a framework to manage the data as a single entity across the entire corporation - not as a collection of business functions, products and facilities'

tion across a company," he Applications for manufac-

turing planning, purchasing, accounting, finance and customer service functions have reached a high degree of sophistication - however, the degree of integration between these applications outside the plant level and with the rest of the organisation remains low." He suggests that a much

higher level of co-operation will be vital in the future and that software has a key role to play in bringing this about. "The number of organisations now operating the manufacture of different components in a number of plants in the Far East, with final assembly at plants in the USA and Europe is increasing," says

facturing companies - including the well-known MANMAN modular series of software products for the manufacturing, marketing, financial and management reporting needs of manufacturing companies. To get an idea of how MRP sky-rocketed over the past 20 years, you only need to look at the evolution of a company like ASK - which now boasts annual sales of more than

The company was founded in 1972 by Ms Sandra L Kurtzig. who recently stepped down as chief executive officer, but still remains chairman of the board, and by Mr Martin Brown, who also stili retains a key role in the firm. Ms Sandra and Mr Martin originally provided pro-gramming services for clients

Eggleton. There is thus a in San Francisco's Bay Area growing need for a framework until they started doing some custom programming between 1972 and 1974.

The first big custom product to come out of this work was a Manufacturing Automation (MA) system, for which the original logon code was MAMA. But to fit in with an operating system requirement for a six-letter logon, it was eventually extended an MAN-MAN was born. The product was first produced for HP's range of computers as Ms Sandra's husband was working at HP and she was able to produce a product to sit on a database on one of HPs minicompu-

Ms Sandra then produced first the MRP application that used a database on a minicomputer and was promptly told she couldn't do things like that. After some hard work and a fair amount of marketing, Ms Sandra's efforts put ASK well ahead of the market and set the style for the others in the emergent MRP market - and soon other integrated systems were using databases on minicomputers.

The real breakthrough in this is that it made an MRP technique, which had previously only been available to IBM mainframe users in large companies, available to smaller companies. And now that power is going to be offered to even smaller enterprises with the availability of a Unix version capable of running on PCs. It could be the next wave of the MRP revolution.

THE SoHo MARKET

### **New sector** looks to the home office

personal computer industry lexicon is "SoHo", an acronym for "Small-office, Home-office" and a password for the return to fast-paced sales growth, according to US personal computer manufacturers.

A rapid increase in the numwork from home is fueling the Solio market and creating new opportunities to sell PC to indimil cumomers.

"There are powerful forces at work which are creating this narket," says Mr Tony Santelli, head of International Business Machines PS/1 brand team. Families with working parents who use computers at work are likely to purchase a machine for their own use and Professionals who have lost their jobs are setting up home offices to do free-lance or consulting work.

"Telecommuting" from home offices is also an increasingly popular way to beat traffic jams that is encouraged by environmentally conscious employers. Lower prices are drawing these potential cus-tomers into the PC market.

With fully configured ystems selling for as little as \$1,000, many more people can afford to consider a home computer. According to Apple Computer, some 14m US families can now afford to buy a home computer, of whom 7m have not done so in the past 10

The requirements of the SoHo market are, however, quite different from those of traditional business market segments, Mr Santelli says, Sold primarily through retail outlets, PCs aimed at the home and very small business market are pre-configured at the factory, with software already

The aim, he explains, is to enable the customer to "get up and running in 10 to 15 minutes". With recent additions to its PS/I product line. IBM aims to get its share of the SoHo

lesser-known clone makers. Apple Computer has also forma Macintosh PCs targeted at the same customers. Dell Computer is also offering products aimed at individual buyers with its Dimension line of PCs, sold via mail order and its Precision brand sold in the Price Club, a warehouse discount store.

Both companies have

One of the primary concerns among this customer group is the fear of obsolescence

recently announced plans to offer their new products in department stores and consumer electronics stores where until recently only have been sold. "The traditional computer resellers were dominated by the 'brand name products, so retailers became a haven for the clones," Mr San telli explains. "We recognised that the retail channel represented an uncovered opportu-

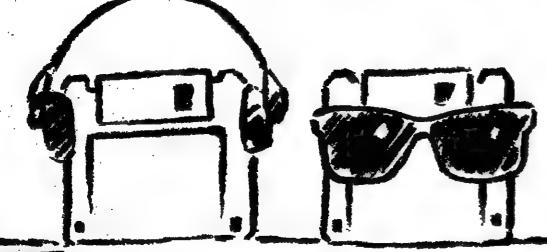

The so-called SoHo market is extremely price sensitive. People paying for computers out of their own pockets are more inclined to shop carefully and search out bargains.

However, one of the primary concerns among this customer group, according to computer cence. Therefore, although they are looking for good value they want to buy the latest technology and the average selling price is well above that for bottom of the range

In the US market, PCs based on Intel 486 microprocessors are rapidly taking the place of older 386 based machines as all market sectors and the Solio segment is no exception.

If you're looking for a plain paper fax machine, we can offer you some mouth-watering reductions on our new NEC NEFAX 461 and 462 high speed, laser faxes.

Huge reductions on running costs, massive cuts in operating costs. Prints on the NEFAX 461/462 cost just 1.6p each. Prints on the leading Ink-Jet fax cost 2.6p each, an incredible 63% more.

Ink-Jet faxes just can't compete. And their print quality doesn't bear comparison.

Using NEC's advanced laser technology, NEFAX 461/462 print out permanent images on plain paper of such high quality, they can be used immediately. No copying. No time wasting.

# Huge reductions in paper faxes.

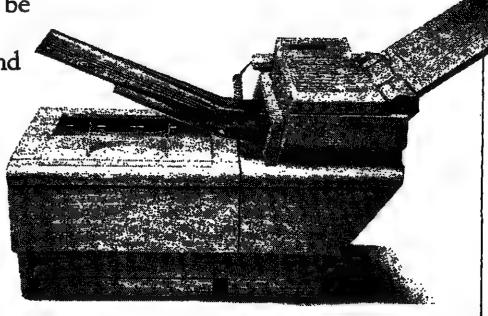

They're convenient. Front loading cassette trays (NEFAX 462 has two), hold 250 sheets of A4 each. The automatic document feeder holds 30 pages. The toner is a simple, easily removable, one piece system that lasts for 8,000 pages. (Up to 10 times more than Ink-Jet faxes.)

And they're fast. Information zooms around the world at 8 seconds a page through their 14,400bps CCITT modem\* The faster the fax, the smaller your phone bill.

32 one-touch keys can be programmed for your most frequently dialled numbers. 4 Multibatch keys send documents to combinations of destinations at a specified time to take advantage of off-peak rates. (More savings.)

Should the paper ever run out, the NEFAX 461/462 can store up to 25 pages in memory. And with the 1MB upgrade option, 70 pages of information can be stored. Not content with being the best fax machine around the office, the versatile little NEFAX 461/462 copies too, able to collate up to 99 copies of a multi-page document.

And don't forget, you can also use recycled paper. It's plain to see why we say, nothing can outfax NEFAX.

#### **SECTION IV**

Wednesday September 30 1992

Public spending cuts are set to follow the floating of the markka earlier this month. The country's affluent standard of life will decline and the fear is that the 1990s will be a long hang-over. This survey has been written by Robert Taylor

# Carefree days are ended

INLAND this autumn is edging along a precipice.

The floating of the markka on September 8 to stem the dramatic outflow of the country's capital reserves has brought a deep sense of national crisis.

To many Finns this autumn's turbulent events on the money markets have come as an unwelcome shock. For most of their country's short history they have weathered political and economic storms with a pugnacious finesse. Now they must face what looks like being a barsh reality.

During the next few weeks the centre-right coalition gov-ernment of Mr Esko Aho must agree and push through parliament a range of cuts in spending programmes as far ahead as 1995 that will mean a sharp contraction in Finland's public service sector and lower living standards for everybody.

1.44

No social benefit or government funded project seems likely to be spared critical scrutiny. Under the unseeing but merciless pressures of a turbulont international money market, Finland's carefree days of semi-isolated, regulated independence are over, probably for good.

"The people are ready to accept radical decisions," Mr Also told the Financial Times. He and many other Finnish policy-makers believe the mood has changed since last autumn when the country was forced

to devalue the markka by 12.3 divided on what to do.

But the prime minister and his coalition colleagues will have to show a much greater willingness to use the knife on cherished spending programmes than they displayed during the course of this year from one crisis to another as sceptical foreign financial opin-ion questioned the government's economic performance.

"We had a credibility problem after the devaluation," admits Dr Sirkka Hāmālāinen governor of Finland's central bank. She disliked having to float the currency and hopes it can be pegged at an exchange rate related to the European currency unit once the markets have calmed down.

Floating provides a breathing space but is no solution for anything. Indeed, there is a strong chorus of complaint from Finnish industrialists who dislike the uncertainty that a floating markka means for business. The trade unions are also unhappy because they face the prospect of having to accept a real cut in the wage packets of their members for next year in central pay negotiations with employers.
For the politicians as well,

floating is not an easy option. Next month, Finland goes to the polls in local government elections and no party wants to say or do anything unpopular

before the results. The Conservatives in the coalition may lose ground, though Mr Aho is confident his own Centre party will show greater resilience. After all, as ministers insist: "There is no alternative" to what they propose to do.

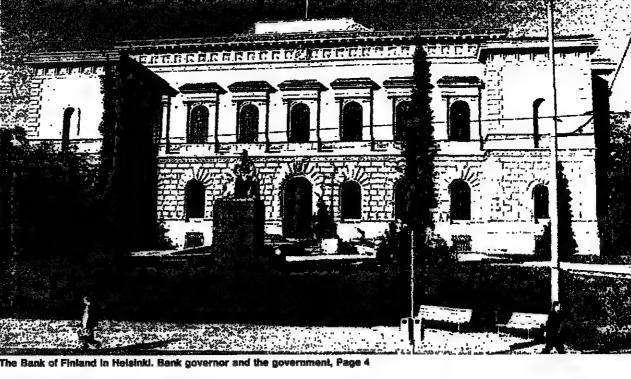

Whatever happens, Finland is not about to suffer a relapse to the kind of misery and deprivation the country knew during the inter-war years, As Dr Hamäläinen points out, all that the country needs to return to the straight and narrow is contract its public sector to its size in the early 1980s before the government became a really big spender.

Nonetheless, relatively straitened times will not come easily to the Finns as they pre-

pare to celebrate the 75th anniversary of their independence from Russian rule. In recent years they have grown used to a standard of life that is one of the most affluent in the world. Under the shadow of Soviet Communism for its first days

of freedom in 1917, Finland survived the Second World War not through diplomatic appeasement but from fighting bravely against the Red Army. It was the only European country to confront Stalin that escaped eventual Soviet After 1944 the Finns were forced to pay large reparations

later they entered into a bilateral clearing house trade agree-ment with the Soviet Union

that lasted until 1990 and was of enormous benefit for Finland as the country received an agreed volume of crude oil and natural gas in return for selling its neighbour sophisticated manufacturing goods and con-sumer durables.

In its foreign and defence policy the country stood firmly neutral. It eschewed moral posturing that might offend the Soviet Union and western countries. At the same time Finland grew rapidly after the 1960s as a thriving market economy, the most capitalistic in the Nordic region. With more than a touch of luck but also a great deal of cunning, the Finnish political establishment was able to enjoy the best of both worlds.

The results in the 1980s were remarkable as Finland's growth rate rose much faster than the western European average. in the past, Finns had emigrated in search of work to Sweden and further affeld: now they came home. There was almost a Klondyke spirit in Finiand as personal consump-tion reached Swedish levels. It

became almost commonplace Community membership for families to enjoy two extended holidays a year. It is the speed at which that remains much higher in Finland than elsewhere in the aggressively booming, swaggering image of the country in the 1980s has changed that bewilders and angers many Finns. From boom to bust in 18 months is an experience no other western European coun-

worse times". The 1990s look like being one long hang-over for the country. This does not mean Finland is about to witness the rise of political extremism. "The leftright spectrum is meaningless these days," says Dr Jakobson. Finland does not even have

mer diplomat, notes gloomily

that Finland is "heading into

any populist anti-statist party, unlike other Nordic countries. But there is widespread apathy and disillusionment with the political system. Accustomed to a sense of security, many Finns are keen to ensure their country is

anchored firmly with western Europe. Support for European

Nordic region. Negotiations are expected to start with Brussels early next year and a national consensus persists on the merits of joining the EC. Last spring's application for entry Mr Aho's government has still not produced a fierce backtry has suffered in recent times. Dr Max Jakobson, a forlash even after the narrow Danish No vote against the Masstricht treaty in June, Dr Jakobson believes there is

a good reason for this. "Many Finns want to be in the EC not for material reasons but to identify themselves with western Europe," be explains.

Neutrality, the sense of balance between east and west and the need to maintain a special relationship with Moscow were the crucial signposts that guided post-war Finnish foreign and security policy. But now, they have lost almost all their relevance. Slowly, Finland is edging closer to a realisation that its national interest lies through developing a greater sense of collective secu-rity in Europe. Ministers do not rule out eventual participation in the Western European Union or whatever military formation emerges out of the KC

in the future. This is not to say that Finland wants to provoke or humiliate Russia. On the contrary, Helsinki's policymakers are keen - within clearly defined limits - to remain on good terms with their neighbour but they share no lilusions on what may ile ahead. A conservative, nationalistic dictatorship with revanchist claims on Finland seems improbable at present. But many Finns are uneasy about what they see as the spread of criminality from Russia that has brought drugs, prostitution and black market activity to

the streets of Helsinki. There will be no "open door" policy to potential Russian immigrants. Nightmare visions two winters ago of hundreds of thousands of hungry jobiess Russians trying to break into Finland may have been melodramatic and mistaken but Finland is not going to relax

# **GETTING** IT CLEAN

Producing food and liquid packaging board that passes the stringent health and hygiene requirements of the food processing industry is more than just a matter of refined techniques, long experience and painstaking manufacture. At Enso, we see careful forest management as the only way of protecting our one renewable natural resource: our country's forests. On balance, we reforest faster than we harvest.

We're also pouring huge resources into R&D to clean up our act and bring our pulp and paper manufacturing processes to the point where they

We're not painting ourselves white, but we can make sure our customers and end users get the clean qualities they demand, with due ecological consideration. Check with the world's principal liquid packaging system manufacturers if they feel we're getting it right.

Only in this way can we stand by that harmonic variation on a theme that has become Enso's

May the Forest be with you.

#### FINLAND

THE Finnish economy is going through its deepest and longes recession for over 60 years. In 1991 the country's real gross domestic product plummeted by 6.5 per cent, the sharpest drop Finland has known this century in peacetime. There will be a negative growth rate - of at least a further minus

1.5 per cent - this year Production in manufacturing sank by as much as 10.7 per cent last year while there was a 12.1 per cent decline in production in the construction sector. Unemployment, only 3.5 per cent in 1990, climbed to 7.6 per cent last year and is now over 14 per cent. This winter the number of jobless is expec-

ted to peak at about 350,000 or

15 per cent of the population. Finland's current account deficit will total FM18bn in the current year, 3.3 per cent of GDP. The collapse of the country's trade with the former Soviet Union has been particularly painful with a fall of no less than 65 per cent last year alone. The textile sector suffered a 30 per cent contraction in its exports as a result.

The squeeze on living standards has been severe. With a earnings in 1991 and an expected zero increase this year. household real disposable year and fell by 5.5 per cent in

During this year, Finland has started to pull itself painfully out of its slump, "Today we have rather a schizophrenic Vartia, head of the Research Institute of the Finnish Economy (Etla). A number of key indicators suggests that the

■ Last November's 12.3 per cent devaluation of the markka has helped the competitiveness of Finland's main export industries - pulp and paper and engineering. The volume of exports is likely to rise this year by 18 per cent. Although Finland's overseas markets ~ Sweden and Britain - have been sluggish, both Germany and France have provided good

Over the first six months of this year the country's metal and engineering sector enjoyed a rise of more than 20 per cent its export earnings to FM25bn. The recovery has been particularly noticeable in the electro-technical and electronic sector as well as transport equipment while the

After a deep recession, there are signs that the economy is starting to recover

The picture has been less satisfactory in mechanical engineering. Fimet, Finland's engineering federation. believes the demand abroad for goods from the country's metal and engineering sector will strengthen during 1993. This may compensate to a certain extent for the decline in the domestic market which looks like continuing into next year. Finland is likely to improve its labour productivity this year by 5.5 per cent and by a further 4 per cent in 1993, according to Ministry of Finance forecasts. There is expected to be an actual 0.5 per cent decline in real earnings next year with an 8 per cent

fall in labour costs in manufac-

turing measured by unit of output this year, with a further decline of 1.5 per cent in 1993. ■ Inflation is going to be at historically low levels with a rise in next year's consumer price index of 2.5 per cent, half of which will be caused by increases in indirect taxes and public charges. The price competitiveness of Finland looks impressive for once.

45.9

19.9

But there is also a darker side to Finland's, present economic outlook. Investment prospects remain bleak, according to the forecasts which suggest it may be 1994 before any upturn can be expected. As Etla says in its latest report: "The commencement of investment activity is

capacity utilisation rate, high ndebtedness and financing difficulties. The investment ratio will remain exceptionally low for several years and the capital stock will be reduced."

The biggest single economic headache for the Finnish government is the rapid escalation of its own debt. At the end of 1991 it amounted to 18.3 per cent of the country's gross domestic product. With local authority spending, the debt amounted to 23 per cent of GDP, at FM117bn. This year it is expected to have risen to

The projections for the next few years suggest that without a much tighter government fisand the funding of it will swal-low up most of Finland's GDP by the middle of the decade.

Why has the government's debt risen so fast? Part of the trouble stems from the decline in tax revenues as the recession has deepened. But Mr Aho, the prime minister, also blames the cost of financing rising unemployment and the banks' problems that have already forced the government to put aside about FM28bn to assist those in trouble.

There is little doubt that the public sector grew too fast in the carefree 1980s. By Nordic standards, Finland has a relatively small public sector. This year it accounts for 48 per cent of total output but the trend of public consumption since 1970 has been ever upwards. Taxes have risen as a proportion of GDP from 31.1 per cent in 1970 to 37.1 per cent today.

'Ordinary people understand we cannot go on the way we were doing," says Mr livo Viinanen, the country's

Mr Jaakko Iloniemi, head of the Centre for Finnish Business and Policy (Eva), agrees. "There is a much greater national awareness of the need for radical adjustments," he says. "It is up to us to clear up our own mess.

Most policy-makers accept the country's public sector must be reduced but the troubles centre over the precise detail on what has to be cut. The government is working on a medium-term strategy to

the cuts already agreed by ministers amount to FM18bn 10 per cent less than in 1992 with further cuts proposed of

FM20bn-30bn for 1994 and 1995. Mr Viinanen warns that this will mean slicing away at the state's large cash support for agriculture as well as a contraction in the value of many social benefits and financial support for local authorities. "It is going to be hard to do this but anybody else would have to do the same," he adds. "The chickens are coming home to roost," declares Mr

Jarl Kohler, head of the forestry employers' association. There is now a good repport between government and

reduce its spending pro- industry. We are talking congrammes up to 1995. Next year structively together now. Everybody accepts the reality." Although the pulp and paper

sector benefited competitively from last November's devaluation. Mr Kohler has no enthusiasm at all for the floating markka. The weak dollar has hit the industry, as 20 per cent of its business is invoiced in that currency. Forestry's foreign debts total an estimated FM30bn. At present, Finnish paper mills operate at only 81 per cent of capacity. Mr Kohler warns: "We will only invest in new capacity when there is a market for the product and it is profitable."

Despite the turbulence of the markets and continuing anxieties over the financial sector.

the Finnish economy should ease gradually upwards next year. Total output, according to government estimates, should improve by 3 per cent in 1993 with a continuing strong export performance. The current account deficit looks set to fall to around FM10.5bn next year, or 2 per cent of GDP. There is also expected to be a modest recovery in investment in machin-

Industrial production looks set to grow by 5.5 per cent next year with a particularly sharp improvement in minerals of 12.5 per cent and a 6.5 per cent increase in manufacturing. Inflation is set to rise slightly to 4 per cent through a further 10 per cent depreciation of the markka when it is eventually

pegged again to the European

ery and equipment of around

Currency Unit. But Finnish average living standards will stagnate at best, if not decline further as unemployment stays high and

domestic demand is squeezed. Wage "flexibility" is expected to cut most real incomes despite a rise in labour costs of around 4 to 5 per cent in engineering and forestry.

After the spread of financial chaos across the European money markets last month, Finnish policy-makers feel less harassed and apologetic about their decision to float the markka. They believe the European Commission in particular recognises they faced no alternative but to take such unorthodox action.

However, Finland's economy remains more sensitive than most to the vagaries of the outside world. The size of the pro posed government cuts package may go some way to calm the markets. But Mr Vilnanen and his cabinet colleagues will need to show greater determination if they hope to convince the foreign exchange dealers that Finland is serious about coming to terms with more

#### **POLITICS**

# Pace gets a bit quicker

political system is exasperating the international money markets. "Our politicians are a lap behind in the race to keep up with events," observed one senior commentator. But Finnish ministers are unused to having to make quick decisions on important issues. They like and negotiating as widely as

The building of consensus remains a vital ingredient of Finnish politics. This is why it can often take weeks, even months, before agreement can be reached on economic policy questions, rather than a matter of days. Such a leisurely tempo of work may or may not ensure better decisions are eventually reached, but what is becoming increasingly clear is that this is failing to impress the outside

Earlier this year, Mr Aho's coalition appeared to recognise the need to speed up the process of decision-making. It proposed, and parliament agreed. that a sensible change had to be made to the constitution. which ensured in future that a simple and not a two-thirds parliamentary majority was needed for the passage of any measure to cut government

Ideally, this should make it much easier for Mr Aho's centre-right coalition government to secure the necessary parlia-mentary approval later this

President Kolvisto has kept his distance from events but many would like to see him take

autumn for whatever tough economic cuts are planned for 1994 and 1995.

more vigorous action

But the ruptures and conflicts that may well break out both inside and between the political parties in the government, particularly in the after-math of the October 18 local government elections, and these could threaten its already fragile existence.

Some ex-ministers are already complaining that Finland is about to Americanise its social welfare system to please the money markets with cuts that will tear to pieces many cherished spending pro-grammes. However, it still seems unlikely that the painful but necessary cuts that ministers will agree upon are going to polarise Finnish politics. The main Social Democratic

opposition has moved a long way since earlier in the year to accept the need for cuts in pub-lic spending. Under its new leader, Mr Ulf Sundqvist, an ex-banker, it takes a robust free-market view of affairs nowadays. Although keen to see government action to keep down the level of unemployment, the party accepts most of the government's key economic arguments.

"We recognise we have a serious debt problem," says Mr Sundqvist. "We must cut our foreign borrowing and we also have to stabilise the markets. We need a broad agreement on balancing the budget over the next two to three years."

The Social Democrats would like to see an immediate government reconstruction and they favour their own early return to power in perhaps a broader-based coalition of national unity. Mr Esko Aho, the prime min-

ister, is not so enthusiastic about such an idea. "The most important point is not who is in the government but what the policy is," he argues. There are still some serious questions to be asked about what the Social Democrats want." Still only 36, the Centre party leader has come in for a barrage of widespread criticism, particularly in the Finnish media. He is accused of

and production in the contract of the contract

Esko Aho, the prime minister

not tough enough for the job. Such attacks are unfair. His government inherited a miserable economic legacy when it office in April last year and it has tried belatedly to come to terms with what is needed to rectify the underly-

ing problems. Moreover, it is often forgotten that Mr Aho led most of his Cabinet colleagues and his own rural-based Centre party into accepting that Finland should seek membership of the European Community. The conversion was slow and deliberate but it appears to have convinced most of the country. When the EC application was handed over in Brussels last April it was with wide support

backing of public opinion. be raised about the behaviour President Mauno Kolvisto. Although he is now half way through his second seven-year term, Mr Koivisto has seen his popularity fall away this autumn because of what is seen as his Olympian treat-

parliament and with the

ment of the economic crisis.

Many outsiders might be forgiven for thinking that the Finnish president is essentially an honorary post, judging by Mr Koivisto's behaviour. How-(9cm - 8pm every day)

ever, under the constitution he bas considerable powers, simi-lar to those of President Fran-

cois Mitterrand in France. Mr Koivisto, a Social Democrat, however has kept his distance from events. His sporadic interventions in support of Mr Aho's government have done little to reassure the Finns.

Many would like to see him take much more vigorous action by giving a lead in the flamboyant manner of Mr Urho Kekkonen, the famous postwar president who intervened on a number of occasions to

restructure governments.
Unhappily, Mr Koivisto appears to have taken a minimalist view of his constitutional powers. Indeed, some observers believe he has devoted more time at least in public to telling the newly independent Baltic states how to conduct their own internal affairs than in expressing a considered and distinctive view about the economic troubles of his own country.

But his attitude may well change in the coming weeks if the economy fails to improve and the government parties suffer a severe setback in next month's local government elections. There are clear signs of a growing sense of national urgency in Finnish politics. The pace may not have quick-ened fast enough to please the markets but the allegedly time-consuming process making decisions looks as if it is coming to an end.

#### FINLAND

#### Problems of the banks

### Taxpayer faces bill

continues to face severe prob-lems as it wrestles with huge credit losses. Last year they mounted to 1.6 per cent of total loans compared with only 0.5 per cent in 1990. The banks suffered a total operating deficit of around FM5bn in 1991 and credit losses soared to FM7.6bn while non-performing loans totalled FM40bn.

Earlier this year, there was a serious danger of a weakening in the capital adequacy of the banks with a resulting restric-tion in the supply of credit available to customers which would have deepened the recession. From 1993, all banks involved in international operations must maintain an 8 per cent capital ratio.

Many of the troubles facing Finland's banks were due to their own mistakes. The pic-ture is similar to that of the other Nordic regions with overextended use of credit at excessively low rates of interest and inadequate collateral, a lax system of checking customer cre ditworthiness, risky invest-ments in real estate and a wasteful use of resources.

But the position was made worse by the last government's loose fiscal policy at the end of the 1980s and the reckless atmosphere caused by sudden financial deregulation. Finnish companies and households were swept up in a free-wheel-

ing spree. The severity of the bank crisis has forced the Finnish public authorities to intervene increasingly since the central bank rode to the rescue of Skopbank, the country's fourth largest commercial bank in September 1991. It was helped through a FM2bn capital injection and a radical restructuring of the bank that involved creation of three separate holding companies to cover industry, shareholdings and real estate. Outstanding loans valued at FM2bn were written off. In March this year an attempt was made by the government to try to restore confidence in the financial system as a whole. This involved both a plan for government investments totalling FMSbn in cer-tificates issued by the banks

and the creation of a govern-

ment bank guarantee fund on

Norwegian lines with maxi-

mum liabilities totalling

ment has been actively encouraging a substantial consolidation of Finland's banking sector through mergers and amalgamations. Forty-one of the country's regional savings banks were brought together in one organisation to be called the Savings Bank of Finland. The future of Skopbank is under discussion at the ent between the government guarantee fund and the leading commercial banks, most notably the Union Bank of Finland

Ministers remain concerned about the further demands that are likely to be made on the state by the ailing financial sector in the months ahead which could add substantially to the budget deficit. The gov-

The government has encouraged banking sector consolidation through mergers and amalgamations

ernment has made it clear that it will underpin the system. No bank is going to collapse. But the total cost to the taxpayer of saving the financial sector from the follies of the late

1980s remains uncertain. Clearly, this vague further demand on budget resources will add to the government's debt burden and make it even harder and more painful to make the cuts designed to calm the uneasy markets

"Additional resources will be needed," admits Dr Sirkka Hamalainen, the central bank governor. Mr Aho, the prime minister, also emphasises the troubles of Finland's banking sector along with the cost of unemployment and falling tax revenues to explain Finland's budget deficit. It will take a long time for

Kansallis-Osake-Pankki, Finland's largest commercial bank, to recover from its financial troubles. Last month KOP had to accept a FM1.73bn capital injection from the government to strengthen its capital base and improve its capital requirement ratio by 1.5 per cent to 8.8 per cent.

when I arrived here," admits Mr Pertti Voutilainen, KOP's At the same time the governchief executive officer since last February. Since he took over, Mr Voutilainen has halved the size of the executive

board and pushed through a 10 per cent cut in the number of staff employed which will be completed this year. Above all, he has launched a strategy designed to focus KOP's activities on basic bank-

ing services through a relocation of its resources. There is less concentration now on real estate management and the equity portfolio. KOP has decided to concentrate its international activities on customers directly involved with Scandinavia. "We are going to do what we can do best," explains Mr Voutilainen.

But the troubles at KOP are deep-seated and they look like persisting for the time being. The Union Bank of Finland the country's other leading commercial bank, also has problems. In August it issued a naximum FM950m convertible bond loan to strengthen its capital base by improving its lending ability to the tune of FM10bn. With a capital adequacy of 10.7 per cent and a 7.4 per cent for its tier one capital the bank has a strong position by international standards.

But, like others, it has gone through substantial restructuring. This month the group's new organisation came into force when Unitas became a holding company with subsidtaries for commercial banking and strategic holdings.

In June it moved its investment banking operations to a separate company, called Man-datum. All Union Bank's merchant banking activities were transferred to the company, which does not form part of the Unitas Group but became a partnership. "This reorganisa-tion will re-enforce the Chinese walls between commercial and merchant banking operations, says Mr Vesa Vainio, Union

Last year the bank suffered an operating deficit before extraordinary items, appropriations and taxes of FM128m compared with a FM480m profit in 1990 and this year the loss will be higher. The bank expects a further loss in 1998. "The bank's troubles are

A GOVERNMENT decision is imminent on whether Finland is going to have a fifth 1000MW nuclear power station to meet its future energy needs. Most of the signs suggest

the demands of the country's main energy intensive export industries, most notably for estry, and recommend the go-ahead. A final decision will rest with parliament, but Finland's anti-nuclear movement may find it difficult in present circumstances to mount an effective campaign against a proposal to build a fifth reac-

The power companies submitted an application for a decision in principle for a new nuclear facility in May 1991 and it has led to some serious divisions inside the cabinet of the centre-right government. If the green light is given, the new nuclear station could begin production by the end of An added complication to the

energy debate in Finland is the on-and-off discussion over the proposed pipeline to bring natural gas from the Norway's Haltenbanken field in the North Sea, with its known 300bn cubic metres of reserves, across Sweden and under the Gulf of Bothnia to Finland. The pipeline, which could be built by the Neste company by 1998,

party, makes no secret of its own preference. It wants parliament to approve the fifth nuclear reactor, Indeed, IVO has already drawn up a short list of six different choices of reactor. The company has no wish to delay making its choice once it has the opportunity to push ahead. It runs already the two Soviet built tors at Loviisa which were established in May 1977 and

January 198L IVO is a state-owned company which is Finland's largest supplier and seller of wholesale electricity. It is also the country's leading producer of electricity as well as being the second largest producer of district

Last year its power gene tion totalled 12.313bn GWh, with just over half that coming from nuclear power followed hy coal, neat, hydropower, natural gas, oil and industrial waste and 0.16 GWh from wind

The company does not confine its business activities to Finland. It runs an international subsidiary which was responsible for an estimated 660 projects and assignments in 24 countries last year. IVO is involved in a number of operations in the Sudan, liganda and Tanzania as well as Abu Dhabi and Nepal. It has recently constructed a factory to manufacture district heating pipes in St Petersburg.

Earlier this year, IVO teamed up with Jaakko Poyry Oy, the Finnish forestry consulting and engineering company, in the creation of an organisation called the Energy Consultation Group with the objective of improving energy efficiency in areas of Russia neighbouring the Finnish border.

The two companies, which together employ 3,000 engineers familiar with the Russian energy sector, are in a necessary know-how for a substantial improvement in heating and energy conservation projects in Russia. The trouble, however, is the financing of such schemes and private com-panies are looking to the Finnish government to back what they want to do.

There is little doubting the concern among ministers about the safety of Russia's nuclear power stations close to Finland's eastern border. Earlier this year, the government earmarked FM6.4m for co-operation with Russia on nuclear safety on the Kola peninsula. where there are four 440MW light-water reactors of the VVER type, and at the Sosnovy Bor power station in St Petersburg which includes 1.000MW graphite-moderated reactors of the RBMK type, similar to the one at Cherno

#### SHIPBUILDING

#### Kvaerner to the rescue

fate of a large part of their country's able cut in overhead costs. The comshipbuilding industry should depend on the attitude of a foreign concern such as Kvaerner but their doubts appear to have been misplaced. In fact, the Norwegian company has an interest in practically every segment of shipping and there are obvious synergies to the benefit of the Masa yards.

As Mr Saarikangas explained in last year's annual report: "Our strength today within passenger shipbuilding and the Arctic segment will also diversify into the field of oil and gas exploration and bring new orders to our yards in Finland thus improving our competitiveness and labour situation.

In the last financial year the yards made a profit (after financial items) of FM270.9m and achieved total net sales of FM1.910bn but this year the performance is not expected to be as good. The change of ownership at the yards has brought with it a clear change in business attitudes. Mr Saarikangas has sought to transform shopfloor attitudes with the introduction of teams into workplace organisation and a considerpany has pushed through a multi-mil-lion markka programme of retraining that was completed this summer.

He is very critical of the way in which the yards were managed during the 1980s. "Many important basic values were forgotten," he argues. In his opinion there had to be a return to "basics, such as appreciation of work, high quality, honesty and reliability. But this has not meant a return to a macho style of management. Mr Saarikangas is keen to stress the need for involvement in ship production at all levels of the workforce. "We need good human relations and a strong belief in our own skills," he argues.

The transformation in the yards has begun but he accepts it will take time. patience and a constant emphasis on efficiency before the company can reach a position where it can survive.

The immediate outlook remains uncertain as long as the recession continues in Europe and the US. This bas inevitably brought postponement of new projects and few new orders in

shipping. But Mr Saarikangas says that the mid-1990s will be "a good time" for

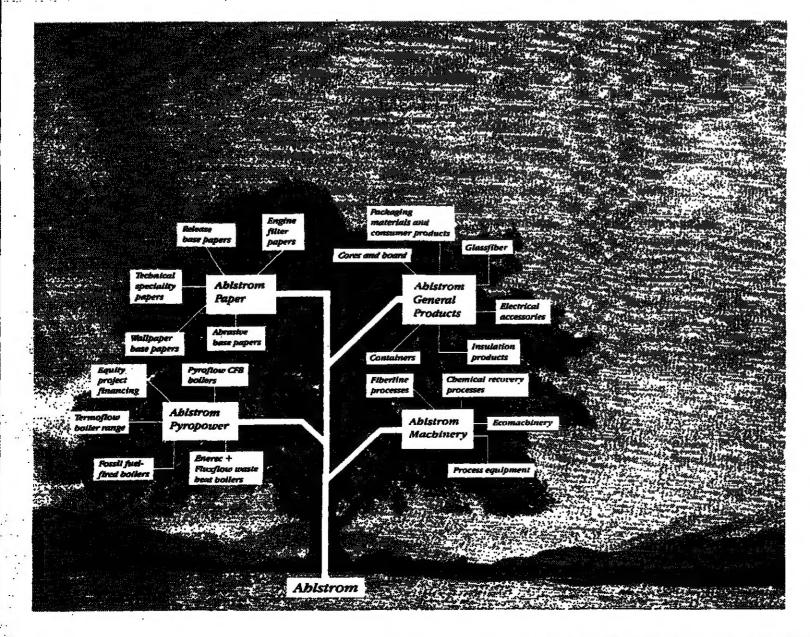

the industry and for the company. At present the yards have an order book valued at FM6.5bn. There are enough orders to ensure the Helsinki yard is kept fully employed until the second half of 1995 but at Turku, where the yard is one of the largest and most modern in Europe, the outlook is uncertain with the last order due for completion by the third quarter of next year.

But a question mark hangs over the prospects of any revival in the traditional export orders from the Finnish yards to Russia which collapsed two years ago with the end of the old clearing house trade system.

At that time, it produced devastation at the yards as a quarter of the order book in Helsinki and the whole order book in Turku was linked to the then Soviet market. "There is still turbulence in the restructuring process. One must not expect any short-term solutions which would lead to opportunities of new shipbuilding orders,"

Though the yards are now part of a Norwegian company, "we are very much one big family," says Mr Saarikangas. He sees their future in the construction of high quality merchant and passenger vessels as well as specialised boats such as ice-breakers, leaving the volume bulk ships to the low-cost parts of the industry in south-east Asia.

a fax to Ahlstrom Corporate

Communications, in Helsinki:

THE FUTURE WILL RE MADE RY COMPANIES LIKE OURS

FTER YEARS of neglect and indifference Finland is promoting itself on international markets. Several organisations have been established recently to sell the image of the country abroad to potential buyers of Finnish products or investors.

An "Exclusively Finland" campaign was launched earlier this year in Britain to try to dispel popular ignorance about the country among the UK business commu-nity. A survey of executives carried out for the campaign last December found that as many as 59 per cent of respondents knew of no manufactured Finnish products at all while 79 per cent were unable to identify Finland's main industries and manufacturers. Yet Finland exports over £2.5bn worth of goods to the UK a year.

As Exclusively Finland concluded, the findings suggest that most executives thought that Finland was "cold and bleak, with an economy based almost entirely on small traditional cottage industries and

The myth of Finland as a Soviet satellite may have long been exposed but it could need a big promotional effort to alter misconceptions about the country's economy. As the campaign admitted: "In contrast to Sweden, very little is known about Figland, except for its cold climate, low popu-

R Sirkka Hāmālāinen, the 53-yearold governor of the Bank of Finland since last April, has the toughest job in Finland at the moment. She - perhaps more than anybody else in the counrecognises the fragility of its economic position amid today's turbulent

international money markets. No central bank alone can pursue a fixed exchange rate policy," she argues. Without the close support of the government, it lacks the authority to maintain its commitment no matter how independent the central bank may be in theory. The government and the central bank must work in harmony on the same policy objectives to have any hope of success.

Over the past 15 months, however, differences have emerged between the two institutions. Dr Hāmālāinen's predecessor, Mr Rolf Kullberg, fought a rearguard action against the pressures that grew up in parts of industry and government in support of devaluation.

He failed to hold the line last November when the markka was devalued but his arguments lost none of their force early this year as it became clear that the deval-uation had not ended the problem but any changes coming in the factors that had brought about the lack of credibility,"

#### TRADE AND INVESTMENT

# Warming the image of the country

lation and forestry."

It intends to spend just under 22m over the next two years to try to change the false picture business has of the country. In co-ordination with the Finnish Foreign Trade Association in Helsinki and Finland Trade Centre in London, the campaign wants in particular to "raise the profile of

The campaign aims to raise the profile of Finnish companies and brands operating in the UK

Finnish companies and brands operating in the UK, raise the profile of Finnish industry and raise the profile of Finland

Eight Finnish companies have joined the campaign across the wide spectrum of the country's export products. These are Abloy Locks, the security firm which is part of the Metra group, Finlandia Vodka owned by Alko, the state-owned alcohol

company, Finlux, which makes audio-visual equipment, Finnboard, the packaging company, Fiskars, the oldest industrial corporation in Finland that makes high quality scissors, kitchen utensils and garden tools and acquired in 1988 the Wilkinson Sword group of the UK; Kulta Beer brewed by the Hartwall Beverages com-pany, Panda Liqorice and Saab Valmet, the top of the range Saab 9000 CS car maker.

At the same time there is an increasing interest in Finland in encouraging inward investment. In August the government introduced legislation expected to come into force from the beginning of 1993 which will lift most of the controls and rules that have inhibited foreign compa nies from moving production capacity and offices to Finland in the past. The new laws will end the current divi-

sion between restricted and free shares by making all shares free and therefore acquirable by foreigners without limita-

tion. Finnish companies do not have to amend their own articles of association for this change to come into effect.

The reform will also enable the transfer of a Finnish company into foreign ownership without being subject to restriction. However, the transfer of the largest 100 Finnish companies with over 1,000 workers on their payroll and a turnover or year end assets totalling FM1bn or more into foreign hands will be monitored until 1996. The Ministry of Trade and Industry will have to approve if the buyer wants to acquire ownership or control of at least a

third of the voting rights in the company The state will continue to have the right to intervene if it believes the acquisition by a foreign company of a large Finnish concern jeopardises the national interest. But the government has made it clear it would use its blocking powers against an individual deal "only in very extreme circumstances". After 1996 the monitoring system will end except for companies that manufacture defence equipment.

It is not just industrial companies that are to be covered by the new law. Banks and insurance companies will also be included. Moreover, real estate acquisition by non-residents of Finland will no longer be subject to government permission though a permit will still be needed where

The reform will abolish restricted shares, allowing foreigners to acquire shares without limitation

the transfer "is intended for leisure-time dwelling or for recreational purposes".

Earlier in the year a new body called Invest in Finland was established at the Finnish Foreign Trade Association with the specific aim of supplying potential investors with detailed information on the country's business environment. Mr Erkki Karmila is the first head of the new

He believes Finland's geographical position can be of real advantage in attracting overseas investors as a "superb gateway to Russia and the newly independent Baltic states with rapidly improving road and rail networks and telecommunication

"We are going through our most fundamental change since independence on our way into an integrated western Europe," explains Mr Karmila. "This is a very good time for foreigners to invest here with the low value of company shares on the bourse." Several foreign companies -Asea Brown-Boveri, ICL and the Norwegian Kvaerner group - already operate in Finland. The Saab Valmet plant is the pride of Saab Auto AB for the high level of its shopfloor productivity.

But as Mr Karmila points out, before 1939 Finland's prosperity owed much to the involvement of foreign capital. The industrialisation of the country in paper, shipbuilding and engineering stemmed in part from British, French and German investment. In other words, the integration of Finland into the western economies over the next few years will bring the country back to what it was even before its independence in 1917 from Russia, part of a wider and open international trading

Bank governor and the government

# Harmony restored

indeed may have actually made it worse. The public disagreement between Mr Aho and Mr Kullberg in April did much to undermine what little faith remained in the markets about Finland's economic strategy. Mr Kullberg's resignation suggested that the central bank could not withstand political pressures.

For her part, Dr Hāmālāinen insists that "floating the markka is not a good solu-tion". She says: "A fixed exchange rate is the best way to guarantee stable economic decision-making". The September 8 decision to float was the result of what she calls "a credibility problem". The markets refused to believe the Finnish government was serious about its intention to tackle its budget deficit. "The reason we floated the markka was because we did not see

Dr Hámäläinen explains diplomatically. She has in mind the absence of any national wage agreement between employ-ers and trade unions for 1993 as well as government decisions to reduce their spending drastically. "Markets in today's uncertainties do not believe in words, they

want to see deeds," she explains. The central bank has come under some criticism for its decision to float without appearing to put up much of a struggle to maintain the markka's fixed exchange rate. But she asserts that it was clear from the onset that they would not be able to withstand the pressures from the market as Finland's capital reserves shrank alarmingly through July and August.

In her opinion Finns are not going back to days of poverty but to the more bal-anced economy that existed in the early 1980s before the huge growth in the public

sector. "There must be structural cuts in spending," Dr Hāmālāinen insists, But this does not mean Finland will have to destroy its welfare state to please the

international markets.

Both the government and the central bank want to see the open industrial sector grow again to around 30 per cent of Finland's gross domestic product from its current level of 20 per cent. She also points out that it only needs a 2 per cent real cut in spending programmes combined with an annual growth rate of 2 per cent to ensure that Finland meets the criteria laid down by the European Community at Maastricht last November for membership of the European Monetary Union

The floating of the markka displeased Brussels and it appeared to signal to the outside world that Finland was too ready to break out of even its own self-impose constraints such as the linkage of the markka to the Ecu if it believed it was necessary to do so in its own national interest. Dr Hāmālāinen argues that floating was "less aggressive" to the EC than a straight devaluation.

She believes that her country needs an external discipline to pursue tighter fiscal

Sirkka Hāmālāinen, the Bank governor: "Floating is not a good soluti

policies. It is hoped to return the markka to the Ecu basket as soon as possible when the markets have settled down.

But as the Paris-based Organisation for Economic Co-operation and Development argued in its annual survey on Finland at the end of August, the loss of credibility suffered as a result of the November devaluation "demonstrates the need for a consistent medium-term strategy designed, in particular, to introduce further discipline in fiscal policy and wage formation". Until this has been achieved, the markka may well have to go on floating. In the weeks ahead Dr Hämäläinen may not only have to keep her nerve but also adopt a stern and unbending attitude towards the government's budgetary strategy.

She is anxious to make clear that no division of opinion exists any longer between the central bank and the government on what needs to be done to restore international confidence in the Finnish currency. But it is going to need a consistent and perhaps even forceful reassertion by the governor of the dangers of any more half-hearted or toothless efforts to please the markets with limited cuts.

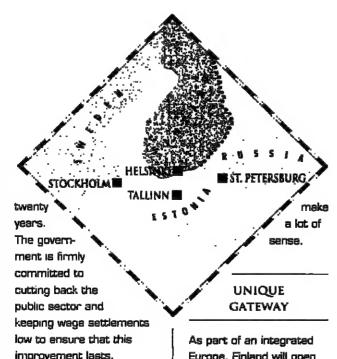

Not prone to the melodramatic, she is well aware of the gravity of Finland's position. The central bank's austere message appears to have got through to the politicians as well. As custodian of the country's vulnerable currency Dr Hämäläinen is in a strong position to put some backbone into the government in the coming weeks. If she fails, the prospects for Finland are grim.

# INVEST IN FINLAND

Finland is no longer closing its doors on foreign investors. From the beginning of next year everybody will be free, apart from certain restrictions, to acquire Finnish companies. shares in Finnish companies and also set up a new company in Finland.

economy is going through its most painful period of adjustment since the War. This is unavoidable as Finland sets out to become an integral part of the new Europe. Once this stage is over, however, it will be difficult to find any economy or any companies as competitive as those in Finland, no matter where in the world you look. If a foreign investor or businessmar wants to secure a footbold in Finland, now is the time

The Finnish government will be playing its role in the future, implementing policies that will maintain an atmosphere and environment accommodating to business activities. Take, for example, Finland's price competitiveness. In the latter part of the 1980s it was eroded, but a series of measures have now made it better than it's ever been during the past

FOREIGN INVESTORS AND BUSINESSMEN

WELCOME Finland will extend a warm welcome to those interested in investing there - and not just in the traditional industries. High-tech plays a big part in Finnish industry. Finland is well represented in both areas at the very top international level thanks in no small degree to the well educated and highly professional personnel. Investing in Finland now and starting joint ventures with Finnish companies

Europe, Finland will open Keeping corporation tax one gateway to the low is another priority. traditional European

markets. But don't overlook the advantages as far as Russia and the Baltic countries are concerned: Finland lies close to these countries; it has excellent transport connections with them; no country has better telecommunications links with them; Finland has been operating on these markets for a long time, and the experience it has gained covers many areas. All this will be available to foreign companies operating in Finland. Finland offers companies a western-style society and market economy. It also offers a

smoothly running infra-

structure and a footbold that is both firm and secure in political and economic terms for those with their eyes on the Russian and Baltic markets. In fact it is no exaggeration to say that Finland forms a splendid centre on which to base all business activities in the Baltic region.

QUALITY OF LIFE -WHERE BETTER THAN FINLAND?

Finland has a high standard of living and all the conveniences associated with western countries, yet its environment remains unspoilt. You're never far away from the tranquillity of the natural surroundings, and you'll never be at a loss for anything to do during your leisure time. Come and find out. The Finnish people look forward to greeting, meeting and cooperating with you in their unique country.

# **Tribute from Major**

NOKIA may not enjoy instant headquarters remain in Helrecognition in Britain but at least it is well-known in Mr John Major's Huntingdon constituency. Last spring Finland's giant telecommunications and electronics group established a strong foothold in the town when the UK prime minister opened its British

headquarters there.
"The speed with which the company has established itself ics, cables and machinery. th internationally in the highly competitive and innovative telecommunications market but also as a growing and important presence in this part of the world is a great tribute to Nokia," Mr Major said then.

The company has seized the opportunities provided by the emergence of the UK's deregulated and liberalised telecommunications system with a five-fold increase in its telecommunications sales to the country in the past two years.

Last spring the Finnish company won an order to supply Windsor Cable Television's cable telecom division with Nokia DX 200 digital cross-connect systems to link its local service franchise to the national and international network. Similar equipment has been ordered more recently by Mid Downs Communications with the provision of 37,000 lines to cover Crawley, Horley and Gatwick airport.

Today the company is the world's second largest mobile phone manufacturer after Motorola. It also claims to be the third biggest European manufacturer of colour televi-sion sets while it is the continent's sixth largest maker of cable as well as a global leader in cable machinery production. With 27,000 workers in 36 countries. Nokia has become a substantial European technology group. While its corporate

sinki, its consumer electronics division is run from Geneva. Under Mr Jorma Ollila, the 41-year-old chief executive who became Nokia's president last January and chief executive officer only in June, the com-

pany looks set to thrive in its

designated business areas -

**Profile:** NOKIA

telecommunications, mobile telephones, consumer electron-"The worst is over. insists. "We won't make a profit this year but the result will be better than in 1991

when the company made a FM334m pre-tax loss. A primary cause of last year's setback was the collapse of Nokia's telecommunications business with the Soviet Union, "From FM1.2hn sales in 1990 it fell to zero in 1991," he explains. "But over the past 10 months we have filled the gap through acquisition of orders

for our GSM and PCN systems in Germany.' An important advance was achieved by the company in June when it announced it was forming a joint venture at Fort Worth in Texas for the production of mobile telephones in collaboration with a subsidiary of the Tandy corporation.

The newly formed TNC company is scheduled to start production of high volumes of cellular phones early next year for the US market. Last year North America accounted for around half the cellular phones sold worldwide.

Mr Ollila says: "Two reasons have necessitated our US presence, the weakness of the US dollar and the need to be closer to a market with a 30 per cent annual volume growth.

He is well equipped to develop the company's telecommunications and mobile phone activities. In just two

years - 1990 and 1991 - he turned the mobile phones division from loss to profit through cost-cutting and rationalisation which meant reducing the workforce and doubling pro-duction volume. "I brought research and development, manufacturing and the market-ing work much closer together and reduced the cycle time." Mr Ollila's managerial performance impressed Nokia's his meteoric rise to the top.

The company solved the problem of its loss-making data division, bought from Ericsson, by selling it in 1991 to ICL for £230m. It also partially divested itself from chemicals by merging them with the Finnish company Kymmene in a 50-50 partnership.

Consumer electronies remains a headache. Produc tion of colour TV sets has been concentrated in the company's two plants at Turku in Finland and Bochum in Germany.

The cables business is also suffering from a fall in European capital investment and overcapacity in the industry. Nokia has carried out cost-cutting and has benefited from orders for power and telephone cables, with a 24 per cent increase in the order book in the first four months.

"We are not a conglomerate any more but a focused technology group," says Mr Ollila. The company appears to have a promising future in the telecommunications industry.

In 1987, Nokia made a splash by hiring all the billboards in Sweden. The company can hardly do the same in Britain. But across much of western Europe it looks like one of Finland's corporate flagships, signalling the arrival of the country's industry in the wider continental markets.

How the Finns relax

### Taking the sauna way of life

FINLAND IS the homeland of the sauna. To most Finns it is neither a luxury nor a status symbol but very much a way of life. There are an estimated 1.5m saunas in a country with a population of only 5m. Indeed, no city apartment seems to be complete without one. Most Finns take one to two saunas a week.

The sauna is traditionally made up of a hot room, washroom and a dressing room, and its walls are constructed mainly out of either pine or spruce with concrete floors. The stove or open fireplace of stones lies at the centre of the sauna, heated by electricity in urban areas and by wood in the countryside.

The technique of the sauna involves throwing the heated water onto the stones to intensify the humidity. The air temperature around your head needs to be 80-100 centigrade and ventilation should be regulated at 60kg an hour.

The sauna is nothing like a shower. The more time you spend in it, the more relaxed you become as you sit naked on a small towel on wooden planks and absorb the heat through your pores, hitting yourself from time to time with bundles of birch leaves to intensify the sweating. Coming out, you should take a cold swim and then drink some fresh juice or beer. Up in Lapland in the winter, a sauna is generally followed by a run into the snow.

The sauna is not merely a washing place for Finns but also somewhere to create a sense of well-being and relaxation. It has been recommended as a useful antidote to modern stress, although many Finnish businessman tend to carry their work troubles into the sauna where they can discuss them together with their male colleagues, away from eavesdroppers.

There are plenty of don'ts about taking a sauna. Warnings are given that there should not be a competition to see who can stand the highest temperature. Big meals and alcohol need to be avoided beforehand. People with high blood pressure or heart complaints should avoid

swimming in cold water after their sauna. The Finns are annoyed at the way in which the sauna, like the massage parlour, has degenerated abroad into a kind of sexual experience. Traditionally, it has served in rural areas as not just a health centre for all the family but also as a maternity clinic. There are no signs that the sauna is in decay. On the contrary, it remains an important daily event for most Finns.

#### FINLAND

#### Problems of the banks

### Taxpayer faces bill

continues to face severe prob-lems as it wrestles with huge credit losses. Last year they mounted to 1.6 per cent of total loans compared with only 0.5 per cent in 1990. The banks suffered a total operating deficit of around FM5bn in 1991 and credit losses soared to FM7.6bn while non-performing loans totalled FM40bn.

Earlier this year, there was a serious danger of a weakening in the capital adequacy of the banks with a resulting restric-tion in the supply of credit available to customers which would have deepened the recession. From 1993, all banks involved in international operations must maintain an 8 per cent capital ratio.

Many of the troubles facing Finland's banks were due to their own mistakes. The pic-ture is similar to that of the other Nordic regions with overextended use of credit at excessively low rates of interest and inadequate collateral, a lax system of checking customer cre ditworthiness, risky invest-ments in real estate and a wasteful use of resources.

But the position was made worse by the last government's loose fiscal policy at the end of the 1980s and the reckless atmosphere caused by sudden financial deregulation. Finnish companies and households were swept up in a free-wheel-

ing spree. The severity of the bank crisis has forced the Finnish public authorities to intervene increasingly since the central bank rode to the rescue of Skopbank, the country's fourth largest commercial bank in September 1991. It was helped through a FM2bn capital injection and a radical restructuring of the bank that involved creation of three separate holding companies to cover industry, shareholdings and real estate. Outstanding loans valued at FM2bn were written off. In March this year an attempt was made by the government to try to restore confidence in the financial system as a whole. This involved both a plan for government investments totalling FMSbn in cer-tificates issued by the banks

and the creation of a govern-

ment bank guarantee fund on

Norwegian lines with maxi-

mum liabilities totalling

ment has been actively encouraging a substantial consolidation of Finland's banking sector through mergers and amalgamations. Forty-one of the country's regional savings banks were brought together in one organisation to be called the Savings Bank of Finland. The future of Skopbank is under discussion at the ent between the government guarantee fund and the leading commercial banks, most notably the Union Bank of Finland

Ministers remain concerned about the further demands that are likely to be made on the state by the ailing financial sector in the months ahead which could add substantially to the budget deficit. The gov-

The government has encouraged banking sector consolidation through mergers and amalgamations

ernment has made it clear that it will underpin the system. No bank is going to collapse. But the total cost to the taxpayer of saving the financial sector from the follies of the late

1980s remains uncertain. Clearly, this vague further demand on budget resources will add to the government's debt burden and make it even harder and more painful to make the cuts designed to calm the uneasy markets

"Additional resources will be needed," admits Dr Sirkka Hamalainen, the central bank governor. Mr Aho, the prime minister, also emphasises the troubles of Finland's banking sector along with the cost of unemployment and falling tax revenues to explain Finland's budget deficit. It will take a long time for

Kansallis-Osake-Pankki, Finland's largest commercial bank, to recover from its financial troubles. Last month KOP had to accept a FM1.73bn capital injection from the government to strengthen its capital base and improve its capital requirement ratio by 1.5 per cent to 8.8 per cent.

when I arrived here," admits Mr Pertti Voutilainen, KOP's At the same time the governchief executive officer since last February. Since he took over, Mr Voutilainen has halved the size of the executive

board and pushed through a 10 per cent cut in the number of staff employed which will be completed this year. Above all, he has launched a strategy designed to focus KOP's activities on basic bank-

ing services through a relocation of its resources. There is less concentration now on real estate management and the equity portfolio. KOP has decided to concentrate its international activities on customers directly involved with Scandinavia. "We are going to do what we can do best," explains Mr Voutilainen.

But the troubles at KOP are deep-seated and they look like persisting for the time being. The Union Bank of Finland the country's other leading commercial bank, also has problems. In August it issued a naximum FM950m convertible bond loan to strengthen its capital base by improving its lending ability to the tune of FM10bn. With a capital adequacy of 10.7 per cent and a 7.4 per cent for its tier one capital the bank has a strong position by international standards.

But, like others, it has gone through substantial restructuring. This month the group's new organisation came into force when Unitas became a holding company with subsidtaries for commercial banking and strategic holdings.

In June it moved its investment banking operations to a separate company, called Man-datum. All Union Bank's merchant banking activities were transferred to the company, which does not form part of the Unitas Group but became a partnership. "This reorganisa-tion will re-enforce the Chinese walls between commercial and merchant banking operations, says Mr Vesa Vainio, Union

Last year the bank suffered an operating deficit before extraordinary items, appropriations and taxes of FM128m compared with a FM480m profit in 1990 and this year the loss will be higher. The bank expects a further loss in 1998. "The bank's troubles are

A GOVERNMENT decision is imminent on whether Finland is going to have a fifth 1000MW nuclear power station to meet its future energy needs. Most of the signs suggest

the demands of the country's main energy intensive export industries, most notably for estry, and recommend the go-ahead. A final decision will rest with parliament, but Finland's anti-nuclear movement may find it difficult in present circumstances to mount an effective campaign against a proposal to build a fifth reac-

The power companies submitted an application for a decision in principle for a new nuclear facility in May 1991 and it has led to some serious divisions inside the cabinet of the centre-right government. If the green light is given, the new nuclear station could begin production by the end of An added complication to the

energy debate in Finland is the on-and-off discussion over the proposed pipeline to bring natural gas from the Norway's Haltenbanken field in the North Sea, with its known 300bn cubic metres of reserves, across Sweden and under the Gulf of Bothnia to Finland. The pipeline, which could be built by the Neste company by 1998,

MANY FINNS regard Mr Martin

cing about 15 to 16 per cent of

party, makes no secret of its own preference. It wants parliament to approve the fifth nuclear reactor, Indeed, IVO has already drawn up a short list of six different choices of reactor. The company has no wish to delay making its choice once it has the opportunity to push ahead. It runs already the two Soviet built tors at Loviisa which were established in May 1977 and

January 198L IVO is a state-owned company which is Finland's largest supplier and seller of wholesale electricity. It is also the country's leading producer of electricity as well as being the second largest producer of district

Last year its power gene tion totalled 12.313bn GWh, with just over half that coming from nuclear power followed hy coal, neat, hydropower, natural gas, oil and industrial waste and 0.16 GWh from wind

The company does not confine its business activities to Finland. It runs an international subsidiary which was responsible for an estimated 660 projects and assignments in 24 countries last year. IVO is involved in a number of operations in the Sudan, liganda and Tanzania as well as Abu Dhabi and Nepal. It has recently constructed a factory to manufacture district heating pipes in St Petersburg.

Earlier this year, IVO teamed up with Jaakko Poyry Oy, the Finnish forestry consulting and engineering company, in the creation of an organisation called the Energy Consultation Group with the objective of improving energy efficiency in areas of Russia neighbouring the Finnish border.

The two companies, which together employ 3,000 engineers familiar with the Russian energy sector, are in a necessary know-how for a substantial improvement in heating and energy conservation projects in Russia. The trouble, however, is the financing of such schemes and private com-panies are looking to the Finnish government to back what they want to do.

There is little doubting the concern among ministers about the safety of Russia's nuclear power stations close to Finland's eastern border. Earlier this year, the government earmarked FM6.4m for co-operation with Russia on nuclear safety on the Kola peninsula. where there are four 440MW light-water reactors of the VVER type, and at the Sosnovy Bor power station in St Petersburg which includes 1.000MW graphite-moderated reactors of the RBMK type, similar to the one at Cherno

#### SHIPBUILDING

#### Kvaerner to the rescue

fate of a large part of their country's able cut in overhead costs. The comshipbuilding industry should depend on the attitude of a foreign concern such as Kvaerner but their doubts appear to have been misplaced. In fact, the Norwegian company has an interest in practically every segment of shipping and there are obvious synergies to the benefit of the Masa yards.

As Mr Saarikangas explained in last year's annual report: "Our strength today within passenger shipbuilding and the Arctic segment will also diversify into the field of oil and gas exploration and bring new orders to our yards in Finland thus improving our competitiveness and labour situation.

In the last financial year the yards made a profit (after financial items) of FM270.9m and achieved total net sales of FM1.910bn but this year the performance is not expected to be as good. The change of ownership at the yards has brought with it a clear change in business attitudes. Mr Saarikangas has sought to transform shopfloor attitudes with the introduction of teams into workplace organisation and a considerpany has pushed through a multi-mil-lion markka programme of retraining that was completed this summer.

He is very critical of the way in which the yards were managed during the 1980s. "Many important basic values were forgotten," he argues. In his opinion there had to be a return to "basics, such as appreciation of work, high quality, honesty and reliability. But this has not meant a return to a macho style of management. Mr Saarikangas is keen to stress the need for involvement in ship production at all levels of the workforce. "We need good human relations and a strong belief in our own skills," he argues.

The transformation in the yards has begun but he accepts it will take time. patience and a constant emphasis on efficiency before the company can reach a position where it can survive.

The immediate outlook remains uncertain as long as the recession continues in Europe and the US. This bas inevitably brought postponement of new projects and few new orders in

shipping. But Mr Saarikangas says that the mid-1990s will be "a good time" for

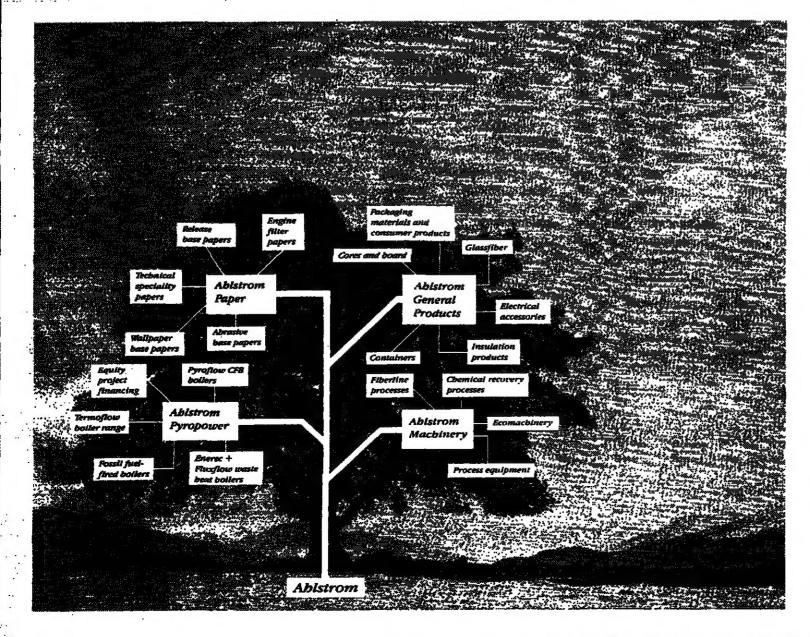

the industry and for the company. At present the yards have an order book valued at FM6.5bn. There are enough orders to ensure the Helsinki yard is kept fully employed until the second half of 1995 but at Turku, where the yard is one of the largest and most modern in Europe, the outlook is uncertain with the last order due for completion by the third quarter of next year.

But a question mark hangs over the prospects of any revival in the traditional export orders from the Finnish yards to Russia which collapsed two years ago with the end of the old clearing house trade system.

At that time, it produced devastation at the yards as a quarter of the order book in Helsinki and the whole order book in Turku was linked to the then Soviet market. "There is still turbulence in the restructuring process. One must not expect any short-term solutions which would lead to opportunities of new shipbuilding orders,"

Though the yards are now part of a Norwegian company, "we are very much one big family," says Mr Saarikangas. He sees their future in the construction of high quality merchant and passenger vessels as well as specialised boats such as ice-breakers, leaving the volume bulk ships to the low-cost parts of the industry in south-east Asia.

# HE AHLSTROM CORPORATION HAS PROVED IT'S POSSIBLE TO TURN PAPER INTO A TREE.
